NOTE: 1. If the reported management cost is <\$20/property or not reported, the previous year's management cost has been adopted and is shown in *italics bold*. In such cases, the OMA cost per property has not been increased to include this adopted management cost.

2. If the OMA cost is not reported, the previous year's value has been adopted and is shown in *italics bold*.

3. Where the residential volume is reported to be greater than 90%, a maximum value of 90% has been adopted. This is shown in *italics bold*.

Notes:

- 1. Where there is no limit (NL) for BOD or SS licences, compliance is deemed to be 100%.
- 2. Where a LWU has 100 percentile licence limits rather than 90 percentile licence limits, the 100 percentile limits are shown.
- 3. A LWU is deemed to comply with its BOD or SS licence if it achieves >=90% compliance with the 90 percentile limit.

| SA          | SA Country (see note 5)  |
| WA          | WA Country (see note 7)  |

NOTES:

1. Melbourne Water was disaggregated into 4 constituent utilities in 1994. Melbourne Water Consolidated results for 1994-95 to 2014-15 are either aggregated results of the constituent utilities or consolidated results reported in the *National Performance Report 2014-15*, *WSAA Facts* (note 2) or reported in *Urban Water Review* (note 4).
2. Metropolitan Utilities - *National Performance Report 2014-15* used to obtain results from 2001-02 to 2014-15 ([www.bom.gov.au](http://www.bom.gov.au)). *WSAA Facts 2005* and *WSAA Facts 1999* (published by the Water Services Association of Australia) used to obtain results from 1994-95 to 1999-00.
3. Queensland Urban Utilities (QUU) was formed by aggregating Brisbane Water, Ipswich City Council, Scenic Rim Regional Council, Lockyer Valley Regional Council and Somerset Regional Council. QUU commenced operations on 1 July 2010. The results shown for QUU prior to 2010-11 are those reported in the NPR and WSAA Facts for Brisbane Water.
4. Victorian Country - *Urban Water Review 1998* and *2004-2005*, (published by the Victorian Water Industry Association) used to obtain results for Victoria Country from 1996-97 to 2004-05. Results from 2005-06 to 2014-15 obtained from median of Victorian utilities (excluding Melbourne Water and its constituents) published in the *2014-15 National Performance Report*.
5. SA Country - *Government Trading Enterprises Performance Indicators 1992-93 to 1996-97 and 1990-91 to 1994-95*, (published by Steering Committee on National Performance Monitoring of Government Trading Enterprises), used to obtain results for 1990-91 to 1996-97. Results from 2005-06 to 2012-13 obtained from median of SA NMUs (Whyalla and Mt Gambier) published in the *National Performance Report 2012-13*. **The results shown from 2005-06 do not report the overall performance of SA country utilities.** The 2012-13 results are for 2 utilities. Country SA was not reported separately in 2013-14 and 2014-15 and the 2013-14 and 2014-15 results for SAW (Adelaide) include SA Country.
6. QLD Country - *Urban Water Service Providers Queensland Report 2003-2004*, (published by Queensland Department of Natural Resources and Mines), used to obtain results from 2002-03 and 2003-04. These results are for 18 large and medium utilities and exclude Brisbane City Council. Results from 2005-06 to 2013-14 obtained from median of 10 QLD NMUs (Cairns, Mackay, Gold Coast, Gympie, Logan, Rockhampton, Toowoomba, Townsville, Unity Water, Wide Bay Water) published in the *National Performance Report 2013-14*. There is a total of approximately 70 Queensland country utilities. The 2014-15 results are the median for the 19 QLD country utilities reporting in the 2014-15 NPR.
7. WA Country - *Government Trading Enterprises Performance Indicators 1992-93 to 1996-97 and 1990-91 to 1994-95*, (published by Steering Committee on National Performance Monitoring of Government Trading Enterprises), used to obtain results for 1990-91 to 1996-97. Results from 1999-2005 obtained from *Water Performance Information* on 32 Major WA Towns 1999-2003 and 2001-2005 prepared by the Western Australia Economic Regulation Authority. The results are for regional towns and do not include Perth. Results from 2005-06 to 2014-15 obtained from median of WA NMUs (Albany, Australind/Eaton, Bunbury, Busselton, Geraldton, Kalgoorlie-Boulder, Mandurah) published in the *National Performance Report 2014-15*. **The results shown from 1999 do not report the overall performance of WA country utilities.** The 2014-15 results are for water supply and sewerage utilities for the above 7 regions.
8. Except for Graphs 3 and 5 to 7, which are in 2015-16 dollars, financial data is presented in 2014-15 dollars.
9. The National Median is the median value of the 2014-15 results published in the *National Performance Report 2014-15*.
10. Hobart and Darwin results have not been included in the graphs due to space limitations and the limited data coverage by these utilities. For Darwin, 2014-15 results for NWI indicators W12, P8, A8, C9 and H3 are 409, 1871, 21, 2 and 100% respectively. For the Tasmanian Water and Sewerage Corporation, which includes Hobart, results are available for only 3 of these indicators - W12 (172), F13 (888) and H3 (99%).

PERFORMANCE COMPARISONS - Social

- NOTES**
- 1. The Typical Residential Bill (TRB) is the annual bill paid by a residential customer using the utility's average annual residential water supplied.
  - 2. The TRB is the principal indicator of the overall cost of a water supply or sewerage system.
  - 3. The 2015-16 Usage Charge and TRB (graphs 3 and 5 to 7) for the metropolitan water utilities have been determined from data published on each utility's website.
  - 4. As the 2009-10 to 2014-15 values for Indicator F4 were not reported by ICON Water, they have been conservatively estimated in graph 4 from the utility's reported TRB and fixed charge for these years: (TRB - Fixed Charge)/TRB x 100.

PERFORMANCE COMPARISONS - Social (Water)

PERFORMANCE COMPARISONS - Social (Sewerage)

|         |         |         |         |         |         |         |           |         |         |         |         |
|---------|---------|---------|---------|---------|---------|---------|-----------|---------|---------|---------|---------|
| 1992-93 | 1993-94 | 1994-95 | 1995-96 | 1996-97 | 1997-98 | 1998-99 | 1999-2000 | 2000-01 | 2001-02 | 2002-03 | 2003-04 |
| 2004-05 | 2005-06 | 2006-07 | 2007-08 | 2008-09 | 2009-10 | 2010-11 | 2011-12   | 2012-13 | 2013-14 | 2014-15 |         |

**\* Microbiological Water Quality Compliance**

1991 to 1998 results are generally on the basis of the 1987 NHMRC/AWRC Drinking Water Quality Guidelines.

1998-99 and subsequent results are generally on the basis of E. coli in the more stringent 1996 NHMRC/ARMCANZ and 2004 NHMRC/NRMMC Australian Drinking Water Guidelines (ADWG) [refer also to page 8].

The exceptions are Victorian country utilities where results up to 2003-04 are on the basis of the less stringent 1984 World Health Organisation Guidelines and which are now on the basis of the Victorian Safe Drinking Water Regulations 2005, and also Melbourne Water where prior to 2004-05 the results are on the basis of the above 1987 Guidelines and which were subsequently on the basis of the 2004 ADWG.

For 2005-06 to 2014-15, the results shown are for "% of population where microbiological compliance was achieved", in accordance with NWI Indicator H3.

As noted on page 7 of the 2014-15 NSW Water Supply and Sewerage Performance Monitoring Report ([www.water.nsw.gov.au](http://www.water.nsw.gov.au)), from 2012 to 2015, the public drinking water supply for 99.9% of the urban population in regional NSW complied with 2011 ADWG for both microbiological and chemical water quality. In 2014-15 99.9% of the 19,400 samples tested complied for microbiological water quality (health related) and 99.9% of the 4,800 samples tested complied for chemical water quality (health related). Refer also to Table 12 on page 183 and Appendix D1 on page 280.

**\* NSW Effluent Result**

The values shown for country NSW are the percentages of total volume of sewage collected in regional NSW that was recycled. For country NSW, 39,000 ML of wastewater was recycled in 2014-15, which is 22 per cent of the total volume of sewage collected and was carried out by 70 per cent of the utilities, mostly for agriculture. Refer also to figures 26a and 27 on page 111.

PERFORMANCE COMPARISONS - Environmental (Sewerage)

\* The values shown prior to 2010-11 are the reported values for sewerage breaks and chokes for indicator A12 in the National Performance Framework 2008-09 Urban Water Performance Indicators and Definitions Handbook.

+ The values shown prior to 2008-09 are all reported sewer overflows in accordance with definition for indicator E13 in the National Performance Framework 2007-08 Urban Water Performance Indicators and Definitions Handbook.

PERFORMANCE COMPARISONS - Economic

**NOTES:** 1. As the economic real rate of return (ERRR) was not reported by utilities other than NSW NMUs and Country NSW in 2001/02 to 2004/05, the reported values for "return on assets" has been shown in graph 24 for all the other utilities for these years.  
2. Operating Cost (OMA) is the Operation, Maintenance and Administration Cost in 2014-15\$.

PERFORMANCE COMPARISONS - Economic

**NOTES:** 1. The Water Supply Capital Expenditure per property shown for Melbourne Water for 2009-10 includes the full \$3.5B capital expenditure by a private consortium for the Victorian Desalination Plant project.

2. The Water Supply Capital Expenditure per property shown for Queensland Urban Utilities (QUU) for 2009-10 includes the \$230M capital expenditure by SEQ Water and LinkWater.

# APPENDIX B: NSW PERFORMANCE MONITORING DATABASE

## Water business data

| WB8                   |         | Dams                                      | Capacity                                     |         | ML   |   |  |
| WB9                   |         | Service reservoirs                        | Number                                       |         | n    | Distribution storage facilities used in the delivery of potable water to customers such as steel or concrete tanks used as daily balancing storages.  | Include clear water tanks at water treatment works.  |
| WB10                  |         | Service reservoirs                        | Capacity                                     |         | ML   |   |  |
| WB11                  |         | Weirs                                     | Number                                       |         | n    | Low barriers, generally within the stream banks, to divert flow to an offtake.  |  |
| WB12                  |         | Weirs                                     | Capacity                                     |         | ML   |   |  |
| WB13                  |         | Bores                                     | Number                                       |         | n    | Bore holes connecting to an aquifer from which water is drawn.  |  |
| WB14                  |         | Bores                                     | Capacity                                     |         | ML/d |   |  |
| WB15                  |         | Pumping stations - potable and nonpotable | Number                                       |         | n    | Pumping stations for headworks and distribution systems.  | Include potable and non-potable pumping stations. Include pumping stations at treatment works that are used to deliver treated water into the distribution system. A pump station may include multiple pumps.  |
| WB16                  |         | Pumping stations - potable and nonpotable | Capacity                                     |         | ML/d |   |  |
| WB17                  | A1      | Treatment works                           | Number                                       |         | n    | Treatment works providing comprehensive water treatment to achieve high quality water.  | Include facilities that remove colour and/or turbidity as well as filtration, disinfection and pH adjustment. Exclude facilities that do not provide filtration and disinfection. Exclude secondary or booster disinfection plants. Exclude fluoridation plants.   |
| WB18                  |         | Treatment works                           | Capacity                                     |         | ML/d |   |  |
| WB20a                 |         | Water mains - potable and nonpotable      | Headworks transfer length                    |         | km   | Trunk mains which are part of the headworks system (eg. dam, river) for delivery of raw water either from scheme to scheme or to treatment works. Bulk suppliers should include trunk mains delivering raw water to other urban centres or schemes. Exclude disused pipe even if maintained for future use.   | Include potable and non-potable mains.   |
| WB20                  | [A2]    | Water mains - potable and nonpotable      | Transfer main length                         |         | km   | A transfer main delivering treated water from a treatment works or service reservoir to a distribution area or other urban centre.  | Include potable and non-potable gravity and rising (pressure) mains. Exclude disused pipe even if maintained for future use.   |
| WB21                  | [A2]    | Water mains - potable and nonpotable      | Reticulation length                          |         | km   | A reticulation main is relatively small pipework distributing supply to a network of customers.   | Include potable and non-potable reticulation. Exclude non-potable reticulation to non-urban areas (eg. for agriculture). Exclude disused pipe even if maintained for future use. Exclude pipework associated with property water services (mains to property meter or service connections). Exclude private mains.   |
| WB22                  | A2      | Water mains - potable and nonpotable      | Total length                                 |         | km   | Sum of (WB20) and (WB21). Excludes (WB20a).   |  |
| WB23                  |         | Renewals - potable and nonpotable         | Mains renewed                                |         | km   | Existing water mains renewed or replaced in the reporting period.   | Exclude maintenance work (refer to Section 5 of NSW Local Government Asset Accounting Manual, 1999). Refer also to page 66 of the NSW Water and Sewerage Strategic Business Planning Guidelines, 2011 ( <a href="http://www.water.nsw.gov.au/ArticleDocuments/36/utilities_nsw_water_sewerage_strategic_planning_guidelines.pdf.aspx">http://www.water.nsw.gov.au/ArticleDocuments/36/utilities_nsw_water_sewerage_strategic_planning_guidelines.pdf.aspx</a> ).   |
| WB24                  |         | Renewals - potable and nonpotable         | Property service connections                 |         | n    | Existing service connections renewed or replaced in the reporting period.   |  |
| WB25                  |         | Renewals - potable and nonpotable         | Customer water meters                        |         | n    | Existing customer water meters renewed or replaced in the reporting period.   |  |
| <b>Connections</b>    |         |   |  |         |      |   |  |
| WB30                  |         | Service connections                       | Service connections                          |         | n    | A service connection is not the same as a connected property. The number of service connections is the number of metered accounts minus the total of any submeters (after master meters eg. to shops or flats) plus the estimated service connections (eg fire connections). The number of service connections includes residential and non-residential and is only used to calculate the Infrastructure Leakage Index and real losses (L / connection / d). For utilities with a dual supply, only the potable service connections should be reported. | The number of metered units and their configuration are not material for determining the number of service connections. Examples: a block of 30 units with a single shared connection is one service connection; a block of 30 units with sub-meters and separate bills for each unit but with a single shared connection to the water main is also one service connection; retirement villages, where there is a single shared connection to the water main that services the whole of the retirement village are also counted as one service connection. |
| WB30a                 |         | Service connections                       | Connections to recycled non-potable supplies |         | n    | The number of accounts for metered and unmetered recycled non-potable supplies. Exclude accounts for non-potable raw water supplies.  | Include connections to wastewater and stormwater recycling systems such as those associated with Water Sensitive Urban Design developments. Exclude connections to non-potable raw water sources (dual supplies). Exclude greywater connections.   |

## Water business data

| NSW No. | NWI No. | Indicator Group                      | Reported Indicator  | 2014/15 | Unit | Indicator Definition   | Instruction   |
|---------|---------|--------------------------------------|---|---------|------|--|---|
| WB31    |         | New connections                      | New residences connected  |         | n    | Number of new residences connected to water supply this reporting year. Excludes vacant subdivided lots. INCLUDES connections resulting from backlog schemes (indicator WB31a).  | Include each individual house, flat, villa, unit, townhouse etc whether separately metered or not.  |
| WB31a   |         | New connections                      | New residences connected - backlog scheme   |         | n    | New residences connected to water supply as a result of connection of a backlog scheme, not residential growth.  | This is a component of indicator WB31.  |
| WB32    | [C2]    | Assessments                          | Residential assessments   |         | n    | Residential assessments for water supply services.   | Include vacant lots.  |
| WB33    | [C3]    | Assessments                          | Non-residential assessments   |         | n    | Non-residential assessments for water supply services.   | Include vacant lots.  |
| WB36    | [C4]    | Assessments                          | Total assessments   |         | n    | Sum of (WB32) and (WB33).  |   |
| WB32a   | [C2]    | Assessments                          | Residential assessments - ADOPTED BY DPI WATER AFTER DATA VALIDATION              |         | n    | Residential assessments ADOPTED BY DPI WATER after data validation.  | Refer to Appendix H of Benchmarking Report.   |
| WB33a   | [C3]    | Assessments                          | Non-residential assessments - ADOPTED BY DPI WATER AFTER DATA VALIDATION          |         | n    | Non-residential assessments ADOPTED BY DPI WATER after data validation.  | Refer to Appendix H of Benchmarking Report.   |
| WB36a   | [C4]    | Assessments                          | Total assessments - ADOPTED BY DPI WATER AFTER DATA VALIDATION                    |         | n    | Total assessments ADOPTED BY DPI WATER after data validation.  | Refer to Appendix H of Benchmarking Report.   |
| WB37    |         | Connected Property Assessment ratios | Connected properties / total assessments  |         | n    | See notes for (WB38).  |   |
| WB37a   |         | Connected Property Assessment ratios | Residential assessments / total assessments                                       |         | n    | See notes for (WB38).  |   |
| WB38    |         | Connected Property Assessment ratios | Connected residential properties / residential assessments                        |         | n    | These ratios do not vary significantly from year to year for water supply systems. NOW has worked with LWUs to establish these ratios and will continue to use the existing ratio shown. If you consider that another ratio is more appropriate, you will need to provide detailed evidence to NOW to support such a change. Evidence that would be required includes the number of residential (single and multi) and non-residential assessments and connected properties from your financial, water and sewerage reports over the last 3 years together with details of vacant lots and new properties connected. Note that ratios are stored as floating decimals but are displayed on this page to two decimal places only. | Connected properties are not the same as assessments. Connected properties rather than assessments are used for consistency with the National Performance Framework. A connected property is one which is connected to the water supply system but which may or may not have a separate assessment. |
| WB32b   | C2      | Connected Properties                 | Residential connected properties - ADOPTED BY DPI WATER AFTER DATA VALIDATION     |         | n    | Residential connected properties calculated by multiplying ADOPTED residential assessments (WB32a) with the connected residential property - residential assessment ratio (WB38).  | Refer to Appendix H of Benchmarking Report.   |
| WB33b   | C3      | Connected Properties                 | Non-residential connected properties - ADOPTED BY DPI WATER AFTER DATA VALIDATION |         | n    | Non-residential connected properties calculated by subtracting ADOPTED residential connected properties (WB32b) from ADOPTED connected properties (WB36b).   | Refer to Appendix H of Benchmarking Report.   |
| WB36b   | C4      | Connected Properties                 | Total connected properties - ADOPTED BY DPI WATER AFTER DATA VALIDATION           |         | n    | Total connected properties calculated by multiplying ADOPTED assessments (WB36a) with the connected property - assessment ratio (WB37).  | Refer to Appendix H of Benchmarking Report.   |
| WB39    |         | Unserved properties and population   | Unserved urban properties   |         | n    | Number of properties in urban zoned land in towns and villages in your utility's area of operations not served by a reticulated public water supply scheme.  | Only applies to properties in urban zoned land. Information on the unserved urban properties and population of each village is available in your LWU's water supply strategic business plan. Exclude vacant lots and rural properties. Exclude premises in land zoned rural residential.            |
| WB40    |         | Unserved properties and population   | Unserved urban population   |         | n    | Estimated permanent population occupying unserved urban properties.  |   |
| WB40a   |         | Unserved properties and population   | Unserved urban population - ADOPTED BY DPI WATER AFTER DATA VALIDATION            |         | n    | Unserved urban population ADOPTED BY DPI WATER after data validation.  | Refer to Appendix H of Benchmarking Report.   |

Water business data

| NSW No.              | NWI No. | Indicator Group        | Reported Indicator  | 2014/15 | Unit | Indicator Definition  | Instruction   |
|----------------------|---------|------------------------|---|---------|------|---|---|
| Water Data (Losses)  |         |                        |   |         |      |   |   |
| WB65                 |         | Water Losses (Potable) | Apparent loss - Unauthorised supply   |         | ML   | Include theft and illegal use (illegal connections, illegal use of unmetered fire connections).   | Exclude firefighting and mains flushing - this is included in unbilled authorised potable supply (indicator WB61). The National Performance Framework default value for unauthorised consumption is 0.1% of total water supplied.   |
| WB66                 |         | Water Losses (Potable) | Apparent loss - Meter inaccuracies  |         | ML   | Under-registration of customer meters and errors in system meters.  | Your utility should have in place a meter testing program and appropriate statistical analysis to determine metering error. Retail meter error defaults are: 2.0% of BACMR (billed authorised consumption, metered residential) or 2.0% of indicator (WB54a) less estimated non-metered supply (Note: an additional sum of 0.5% of BACMR may be added to the residential meter error to account for meter non-registration); 2% of BACMN (billed authorised consumption, metered non-residential) or 2% of indicators (WB62) - (WB54a) less non-metered water supplied. |
| WB67                 |         | Water Losses (Potable) | Total apparent losses   |         | ML   | Apparent losses are the sum of unauthorised potable supply plus meter inaccuracies.   |   |
| WB68                 | [A10]   | Water Losses (Potable) | Real loss - Leakage - Reported by LWU   |         | ML   | Leakage from mains, reservoirs and connections including property service connections to customer meters.   | If leakage is less than 6% of total water supplied, your data should be carefully re-examined as leakage studies have found 6% to be a minimum for leakage for other than bulk water suppliers. Losses of less than 6% should be supported by evidence (eg. waste metering, reservoir drop test or night flow analysis).  |
| WB68a                | [A10]   | Water Losses (Potable) | Real loss - Leakage - ADOPTED BY DPI WATER AFTER DATA VALIDATION                      |         | ML   | Leakage ADOPTED BY DPI WATER after data validation.   | Refer to Appendix H of Benchmarking Report.   |
| WB69                 |         | Water Losses (Potable) | Total potable losses - reported   |         | ML   | Sum of Real losses reported by LWU (WB68) plus Apparent losses (WB67).  | Water losses are only identified for POTABLE water distribution systems.  |
| WB69a                |         | Water Losses (Potable) | Total potable losses - ADOPTED BY DPI WATER AFTER DATA VALIDATION                     |         | ML   | Sum of Real losses ADOPTED BY DPI WATER after data validation (WB68a) plus Apparent losses (WB67).  | Refer to Appendix H of Benchmarking Report.   |
| WB61                 | [W10.1] | Non-revenue water      | Unbilled water  |         | ML   | As entered on the potable supply screen.  |   |
| WB70                 | [W10.1] | Non-revenue water      | Total Potable Losses plus Unbilled Water - reported by LWU                            |         | ML   | Sum of Potable Losses (WB69) and Unbilled Water (WB61).   | Refer to Appendix H of Benchmarking Report.   |
| WB71                 | [W10.1] | Non-revenue water      | Total Potable Losses plus Unbilled Water - ADOPTED BY DPI WATER AFTER DATA VALIDATION |         | ML   | Sum of Potable Loss adopted by DPI Water after data validation (WB69a) plus Unbilled Water (WB61).  | Refer to Appendix H of Benchmarking Report.   |
| WB77                 |         | Leakage factors        | Average system pressure   |         | m    | Estimated average operating pressure in the distribution system.  | Pressures should be averaged over 24 hours. For multiple zones report a weighted average using average pressures and the number of connections in each zone.  |
| WB78                 |         | Leakage factors        | Average length of private pipeline  |         | m    | Estimated average length of property service from the reticulation main to the customer meter.  | Assumed to be zero if the customer meter is normally located at or close to the property boundary. If the customer meter is normally located some distance from the boundary, estimate the average length by randomly sampling an appropriate number of property service connections.   |
| WB74                 |         | Leakage testing        | Leakage test method   |         |      | Select the test used or leave as 'unknown' if no test was carried out.  |   |
| WB75                 |         | Leakage testing        | Year of test  |         | year | Year that latest leakage measurement was carried out or leave as 'unknown' if no test was carried out.  | Enter the final year if testing was undertaken over several years (eg. if 2008 to 2010, enter 2010).  |
| WB76                 |         | Leakage testing        | Result of leakage test  |         | %    | If leakage is less than 6% of total water consumption, this data should be carefully examined as leakage studies have found 6% to be a minimum for leakage for other than bulk water suppliers. Losses of less than 6% should be supported by evidence (eg. waste metering, reservoir drop test, or night flow analysis). |   |
| Water Data (Sourced) |         |                        |   |         |      |   |   |
| WB41                 | [W1]    | Water sourced          | Off-stream dams   |         | ML   | Volume of water abstracted from off-stream dams.  | Measured at the point of abstraction. Include volumes pumped from open channels supplied by these dams.   |
| WB42                 | [W1]    | Water sourced          | On-stream dams  |         | ML   | Volume of water abstracted from on-stream dams.   | Measured at the point of abstraction. Include volumes pumped from open channels fed by these dams. Exclude volumes fed to off-stream dams for storage.  |
| WB43                 | [W1]    | Water sourced          | Run-of-river pumping excluding volumes pumped to dams                                 |         | ML   | Volume of water abstracted from run-of-river pumping.   | Measured at the point of abstraction. Exclude volumes pumped to an off-stream dam or desalination plant.  |
| WB44                 | [W1]    | Water sourced          | River release from Water NSW dams   |         | ML   | Volume of water drawn as a release from a Water NSW dam.  |   |
| WB44a                | W1      | Water sourced          | Total surface water   |         | ML   | Sum of (WB41) + (WB42) + (WB43) + (WB44) + (WB46c).   | Includes surface water desalination.  |
| WB45                 | [W2]    | Water sourced          | Groundwater extraction  |         | ML   | Volume abstracted from groundwater.   | Measured at the point of abstraction, not delivery. Exclude desalinated groundwater. Exclude volumes from artificial recharge by sources counted elsewhere eg. rivers, desalination plants and sewage treatment works (recycling).  |
| WB45a                | W2      | Water sourced          | Total groundwater   |         | ML   | Sum of (WB45) + (WB46b).  | Includes groundwater desalination.  |
| WB46a                | W3.1    | Water sourced          | Marine desalination   |         | ML   | Volume of seawater sourced for desalination. Exclude desalinated surface and groundwater.   |   |

Water business data

| NSW No.                           | NWI No. | Indicator Group               | Reported Indicator                   | 2014/15 | Unit | Indicator Definition  | Instruction   |
|-----------------------------------|---------|-------------------------------|--------------------------------------|---------|------|---|---|
| WB47                              | W4      | Water sourced                 | Recycling                            |         | ML   | Volume of water sourced from recycling. Include residential, industrial, commercial, municipal irrigation and on-site substitution where it replaces potable water. Water for agribusinesses should be included where potable (or untreated water in storage) would normally be used. | Includes water discharged to a waterway for environmental purposes as prescribed by the environmental regulator (WB153). Excludes managed aquifer recharge, both where potable (or untreated water in storage) would normally be used (WB156). Excludes urban stormwater use. This differs from (WB158) where any agricultural or on-site uses are counted. |
| WB174                             | W28.4   | Water sourced                 | Urban stormwater used                |         | ML   | Includes potable and non-potable urban stormwater used by the utility for urban water supply. Excludes stormwater supplied for managed aquifer recharge.  | This is a component of (WB53) (Total sourced water - W7) and Total urban water supplied - W11.  |
| WB48                              |         | Water sourced                 | Total water from utility's sources   |         | ML   | Sum of (WB41) + (WB42) + (WB43) + (WB44) + (WB45) + (WB46a) + (WB47) + (WB174) or NWI Indicators W1+W2+W3.1+W4+W28.4  |   |
| WB49                              | W5.1    | Water sourced                 | Bulk purchase - potable              |         | ML   | Volume of potable water received from a bulk supplier outside your utility's geographic area of responsibility (excludes recycled sewage and urban stormwater).   |   |
| WB50                              | W5.2    | Water sourced                 | Bulk purchase - non-potable          |         | ML   | Volume of non-potable water purchased from a bulk supplier outside your utility's geographic area of responsibility (excludes recycled sewage and urban stormwater).  |   |
| WB52a                             | W6      | Water sourced                 | Bulk purchase - recycled             |         | ML   | Volume of recycled water (potable and non-potable) received from another utility outside your utility's geographic area of responsibility. This is a component of (WB52b).  |   |
| WB52b                             | W5      | Water sourced                 | Total bulk water purchased           |         | ML   | Sum of (WB49) + (WB50) + (WB52a) + (WB172) or NWI Indicator W5 = W5.1+W5.2+W6+W28.2   | Total volume of water (potable or non-potable) received from another utility outside your utility's geographic area of responsibility. Includes water from recycled sewage and urban stormwater received. The volume of water will include water that is subsequently exported to another utility.  |
| WB53                              | W7      | Water sourced                 | Total water sourced                  |         | ML   | Sum of (WB48) + (WB52b) or NWI Indicator W7 = W1+W2+W3.1+W4+W5+W28.4  |   |
| WB51                              |         | Water sourced                 | Potable bulk supplier-supply scheme  |         |      | Select the name of bulk supplier or bulk supply scheme, or leave as 'unknown' if no purchase was made.  | If a bulk supplier or scheme is not included in the pick list, please notify the Manager, Performance Monitoring, DPI Water for rectification (9842 8505).  |
| WB52                              |         | Water sourced                 | Purchase price potable bulk water    |         | c/kL |   |   |
| Water Data (Supplied Non Potable) |         |                               |                                      |         |      |   |   |
| WB63                              | W8.2    | Authorised non-potable supply | Residential                          |         | ML   | Non-potable water reticulated to residential customers.   | Include metered and estimated unmetered supply. Exclude recycled water and urban stormwater.<br><br>See potable water supplied indicator (WB54a) for definition of Residential.   |

| WB54a                                | W8.1    | Authorised potable supply     | Residential  |         | ML   | Total metered and estimated non-metered potable water supplied to residential properties. Excludes recycled water and urban stormwater.   | Include retirement villages. Exclude caravan parks (long term stay/holiday parks) and mobile home villages.   |
| WB54b                                | W8.1    | Authorised potable supply     | Residential - ADOPTED BY DPI WATER AFTER DATA VALIDATION |         | ML   | Total metered and estimated non-metered potable water supplied to residential properties ADOPTED BY DPI WATER after data evaluation. Excludes recycled water and urban stormwater.                          | Refer to Appendix H of Benchmarking Report.   |
| WB55                                 | [W9.1]  | Authorised potable supply     | Commercial   |         | ML   | Total metered and estimated non-metered potable water supplied to commercial customers. Excludes recycled water and urban stormwater use.   | Include offices, shops, clubs, hotels, motels, mobile home villages, caravan parks (including long stay/holiday parks) etc.   |
| WB55a                                | [W9.1]  | Authorised potable supply     | Commercial - ADOPTED BY DPI WATER AFTER DATA VALIDATION  |         | ML   | Total metered and estimated non-metered potable water supplied to commercial customers ADOPTED BY DPI WATER after data evaluation. Excludes recycled water and urban stormwater use.                        | Refer to Appendix H of Benchmarking Report.   |
| WB56a                                | [W9.1]  | Authorised potable supply     | Industrial - mining                                      |         | ML   | Total metered and estimated non-metered potable water supplied to mining industry customers. Excludes recycled water and urban stormwater use.  | <p>For industrial customers within urban zoned land or industrial customers that are supplied with potable water outside of urban zoned land.</p> <p>Mining includes customers that mainly extract naturally occurring mineral solids (eg.coal and ores); liquid minerals (eg.crude petroleum); and gases, such as natural gas. The term mining is used in the broad sense to include: underground or open cut mining; dredging; quarrying; well operations or evaporation pans; recovery from ore dumps or tailings as well as beneficiation activities (i.e. preparing, including crushing, screening, washing and flotation) and other preparation work customarily performed at the mine site, or as a part of mining activity.</p> <p>Mining is distinguished by two basic activities: mine operation and mining support activities.</p> <p>Mine operation includes units operating mines, quarries, or oil and gas wells on their own account, or for others on a contract or fee basis, as well as mining sites under development.</p> <p>Mining support activities include units that perform mining services on a contract or fee basis, and exploration (except geophysical surveying).</p> <p>Mining excludes refining or smelting of minerals or ores (other than preliminary smelting of gold), or in the manufacture of such products of mineral origin as coke or cement. These are classified to Manufacturing.</p> |
| WB56b                                | [W9.1]  | Authorised potable supply     | Industrial - manufacturing                               |         | ML   | Total metered and estimated non-metered potable water supplied to manufacturing customers. Excludes recycled water and urban stormwater use.  | <p>For industrial customers within urban zoned land or industrial customers that are supplied with potable water outside of urban zoned land.</p> <p>Manufacturing includes customers mainly engaged in the physical or chemical transformation of materials, substances or components into new products (except agriculture and construction). Manufacturing units are often described as plants, factories or mills and characteristically use power-driven machines and other materials-handling equipment.</p> <p>Assembly of the component parts of manufactured products, either self-produced or purchased from other units, is considered manufacturing. For example, assembly of self-manufactured prefabricated components at a construction site is considered manufacturing, as the assembly is incidental to the manufacturing activity.</p>   |
| WB56c                                | [W9.1]  | Authorised potable supply     | Industrial - electricity generation                      |         | ML   | Total metered and estimated non-metered potable water supplied to electricity generating customers. Excludes recycled water and urban stormwater use.   | For industrial customers within urban zoned land or industrial customers that are supplied with potable water outside of urban zoned land.  |
| WB56d                                | [W9.1]  | Authorised potable supply     | Industrial - other                                       |         | ML   | Total metered and estimated non-metered potable water supplied to other industrial customers (excludes mining, manufacturing and electricity generation). Excludes recycled water and urban stormwater use. | For industrial consumers within urban zoned land or industrial consumers that are supplied with potable water outside of urban zoned land.  |
| WB57                                 | [W9.1]  | Authorised potable supply     | Rural  |         | ML   | Total metered and estimated non-metered potable water supplied to farms and hobby farms outside urban zoned land.   | Include potable water supplied for stock and domestic uses outside of urban zoned land including market gardens, agricultural irrigation. Include metered and estimated unmetered water supplied. Exclude non-potable water supplied.   |
| WB58                                 | [W9.1]  | Authorised potable supply     | Municipal - excluding public parks                       |         | ML   | Total metered and estimated non-metered potable water supplied to municipal customers. Exclude recycled and urban stormwater use.   | Include hospitals, schools, nursing homes, colleges, universities, public pools, gaols etc. Include metered and estimated unmetered water supplied. Exclude public parks.   |
| WB60                                 | [W9.1]  | Authorised potable supply     | Municipal - public parks                                 |         | ML   | Total metered and estimated non-metered potable water supplied for watering public parks and gardens.   | Include potable supply for watering of public parks, gardens and ovals etc. Include metered and estimated unmetered water supplied.   |

Water business data

| NSW No.                        | NWI No. | Indicator Group               | Reported Indicator   | 2014/15 | Unit | Indicator Definition   | Instruction   |
|--------------------------------|---------|-------------------------------|--|---------|------|--|---|
| WB60a                          | W9.1    | Authorised potable supply     | Total non-residential  |         | ML   | Sum of (WB55) + (WB56a) + (WB56b) + (WB56c) + (WB56d) + (WB57) + (WB58) + (WB60).  |   |
| WB59                           | W14.1   | Authorised potable supply     | Bulk water exports   |         | ML   | Total volume of water (potable) supplied to other utilities or entities outside your utility's geographic area of responsibility. Exclude recycled water and urban stormwater use.   |   |
| WB61                           | [W10.1] | Authorised potable supply     | Unbilled water   |         | ML   | Volume of unbilled water is the potable water supplied, excluding residential, commercial, municipal and industrial water. Metered and estimated unmetered potable authorised supply for which a bill is not issued to the consumer. | Include firefighting and mains flushing as this is authorised supply and is not a water loss. The National Performance Framework default value for unmetered, unbilled authorised supply is 0.5% of total water supplied. Examples: firefighting (customer fire connections and street hydrants); mains flushing etc. |
| WB62                           | W11.1   | Authorised potable supply     | Total authorised potable supply - Reported                                   |         | ML   | Sum of (WB54a) + (WB55) + (WB56a) + (WB56b) + (WB56c) + (WB56d) + (WB57) + (WB58) + (WB60) + (WB61)<br>or NWI Indicator W11.1 = W8.1+W9.1+ [W10.1]   | Excludes losses, recycled water (WB158), urban stormwater used (WB174) and bulk water exports (WB59).   |
| WB62a                          | W11.1   | Authorised potable supply     | Total authorised potable supply - ADOPTED BY DPI WATER AFTER DATA VALIDATION |         | ML   | Total authorised potable supply ADOPTED BY DPI WATER after data validation. Sum of (WB54b) + (WB55a) + (WB56a) + (WB56b) + (WB56c) + (WB56d) + (WB57) + (WB58) + (WB60) + (WB61).  | Refer to Appendix H of Benchmarking Report.   |
| Water Data (Supplied Recycled) |         |                               |  |         |      |  |   |
| WB150                          | W20     | Authorised recycled supply    | Residential  |         | ML   | Recycled water for potable and non-potable town water supply reticulated to residential customers. Excludes urban stormwater use.  | Include metered and estimated unmetered recycled water supplied. Note that recycled water components should now be reported at the sewage treatment works level. These are then aggregated across each of the treatment works and imported into the existing water business indicators for recycled water supplied.   |
| WB151                          | W21     | Authorised recycled supply    | Commercial, Industrial, Municipal  |         | ML   | Recycled water supplied to commercial, industrial, municipal properties. Includes golf courses. Excludes urban stormwater use.   |   |
| WB152                          | W22     | Authorised recycled supply    | Agricultural   |         | ML   | Recycled water supplied for agricultural purposes. Includes irrigation, forestry and livestock. Excludes urban stormwater use.   |   |
| WB153                          | W23     | Authorised recycled supply    | Environmental  |         | ML   | Recycled water supplied for environmental purposes as prescribed by the environmental regulator. Includes discharge to rivers, sea or natural wetlands, provided there is a beneficial use rather than disposal.                     |   |
| WB154                          | W24     | Authorised recycled supply    | On-site  |         | ML   | Recycled water used on-site external to the treatment process.   |   |
| WB155                          | W25     | Authorised recycled supply    | Other  |         | ML   | Recycled water supplied to other users including managed aquifer recharge, firefighting, mains flushing, losses and leakage.   |   |
| WB156                          | W25.1   | Authorised recycled supply    | Managed aquifer recharge   |         | ML   | Recycled water supplied for managed aquifer recharge, excluding environmental water and urban stormwater use.  |   |
| WB157                          | W15     | Authorised recycled supply    | Bulk recycled water exports  |         | ML   | Recycled water supplied to other utilities or entities outside your utility's geographic area of responsibility. Excludes urban stormwater.  |   |
| WB158                          | W26     | Authorised recycled supply    | Total recycled supplied  |         | ML   | Total treated effluent excluding evaporation and urban stormwater use.<br>Sum of (WB150) + (WB151) + (WB152) + (WB153) + (WB154) + (WB155).<br>or NWI Indicator W26 = W20+W21+W22+W23+W24+W25  |   |
| WB158a                         | W26     | Authorised recycled supply    | Total recycled supplied - ADOPTED BY DPI WATER AFTER DATA VALIDATION         |         | ML   | Total recycled supplied ADOPTED BY DPI WATER after data validation.  | Refer to Appendix H of Benchmarking Report.   |
| Demand Management              |         |                               |  |         |      |  |   |
| WB84                           |         | Demand management initiatives | Customer education program   |         | Y/N  |  |   |
| WB85                           |         | Demand management initiatives | Permanent water saving measures  |         | Y/N  | Permanent water saving measures in place to conserve water.  | Example: no hosing of concrete or hard surfaces at any time.  |
| WB86                           |         | Demand management initiatives | Effluent or stormwater use   |         | Y/N  |  |   |
| WB87                           |         | Demand management initiatives | Leakage reduction program  |         | Y/N  |  |   |
| WB88                           |         | Demand management initiatives | Retrofit program   |         | Y/N  |  |   |
| WB89                           |         | Demand management initiatives | Rebates for water efficient appliances                                       |         | Y/N  |  |   |

Water business data

| NSW No.        | NWI No. | Indicator Group               | Reported Indicator                     | 2014/15 | Unit | Indicator Definition  | Instruction  |
|----------------|---------|-------------------------------|--|---------|------|---|--|
| WB90           |         | Demand management initiatives | Customer billing interval              |         | mths | Interval between customer bills this reporting year.  |  |
| WB91           |         | Demand management initiatives | Other initiative                       |         |      | Other demand management initiatives the utility has in place, such as 'Water saving tips on Council's website' or 'Member of the Savewater! Alliance'.  | Exclude initiatives that are already mentioned in indicators (WB84) to (WB89) - customer education program, permanent water saving measures, effluent or stormwater use, leakage reduction program, retrofit program, rebates for water efficient appliances.  |
| WB92           |         | Demand management initiatives | Other initiative                       |         |      |   |  |
| WB93           |         | Rainwater tanks               | Rebate for tanks                       |         | Y/N  |   |  |
| WB94           |         | Rainwater tanks               | Maximum rebate available               |         | \$   |   |  |
| WB95           |         | Drought restrictions          | Days water restrictions due to drought |         | days | Include all days of drought water restriction regardless of the level of restriction.   |  |
| Service Levels |         |                               |  |         |      |   |  |
| WB96           | [C10]   | Complaints                    | Service complaints                     |         | n    | Complaints relating to service quality and reliability, including leaks. Exclude water quality complaints and billing complaints. Exclude queries about service quality and reliability and requests for information on efficient water use and 'water saving'.                         | <p>Include bursts, leaks, service interruptions, adequacy of service, water pressure, affordability, behaviour of staff or agents.</p> <p>Exclude complaints about tariff structure. A complaint is a written or verbal expression of dissatisfaction about an action, proposed action or failure to act by the water utility, its employees or contractors. Complaints from separate customers arising from the same cause count as separate complaints. Include complaints received by the water utility in person, by mail, by fax, phone, email or text message.</p> <p>Exclude complaints about planned service interruptions unless the customer expresses dissatisfaction about the interruption. Australian Standard AS ISO 10002-2006 refers.</p> <p>Examples: Include complaints about pressure when found to be caused by a leaking mains or when a customer expresses dissatisfaction with the normal pressure.</p> <p>If the operator is uncertain whether the customer is DISSATISFIED, the operator should ask 'Do you wish to report a complaint on this matter?'.</p>                     |
| WB97           |         | Complaints                    | Frequent service complaint 1           |         |      | A complaint is a written or verbal expression of dissatisfaction about an action, proposed action or failure to act by the utility, its employees or contractors.   | Include complaints in person, by mail, email, fax, phone, or text messaging.   |
| WB98           |         | Complaints                    | Frequent service complaint 2           |         |      |   |  |
| WB98a          |         | Complaints                    | Customer contacts/inquiries            |         | n    | A request by a customer for information about a product or service provided by the water utility (eg. 'tips on water saving') that does not indicate customer dissatisfaction. The customer may also call to advise the utility of asset condition (eg. a 'weep' at their water meter). |  |
| WB99           | [C12]   | Complaints                    | Billing complaints                     |         | n    | Complaints concerning account payment, financial loss or overcharging and billing errors. Exclude queries (WB98a).  | <p>Do not include complaints on government pricing policy or complaints about the tariff or queries about how the tariff is calculated. A complaint is a written or verbal expression of dissatisfaction about an action, proposed action or failure to act by the water utility, its employees or contractors. Complaints from separate customers arising from the same cause count as separate complaints. Includes complaints received by the water utility in person, by mail, by fax, phone, email or text message.</p> <p>When a customer queries an account, this is not counted as a complaint unless the customer identifies that they have rung to make a complaint. If the customer rings to make an inquiry but remains dissatisfied or the inquiry identifies an error in the bill, this should be recorded as a complaint.</p> <p>If a customer makes repeated contact on the same billing issue this should be recorded as a complaint. If the operator is uncertain whether the customer is DISSATISFIED, the operator should ask 'Do you wish to report a complaint on this matter?'.</p> |
| WB100          | [C10]   | Complaints                    | Other complaints                       |         | n    | Complaints other than water quality, service or billing. Exclude queries (WB98a).   | <p>A complaint is a written or verbal expression of dissatisfaction about an action, proposed action or failure to act by the water utility, its employees or contractors. Complaints from separate customers arising from the same cause count as separate complaints. Include complaints received by the water utility in person, by mail, by fax, phone, email or text message. Exclude complaints on government pricing policy or tariff structures.</p> <p>If the operator is uncertain whether the customer is DISSATISFIED, the operator should ask 'Do you wish to report a complaint on this matter?'.</p>  |

Water business data

| NSW No. | NWI No. | Indicator Group                | Reported Indicator   | 2014/15 | Unit | Indicator Definition   | Instruction  |
|---------|---------|--------------------------------|--|---------|------|--|--|
| WB101a  | C9      | Complaints                     | Water quality complaints (bulk supplies)                   |         | n    | Customer complaints concerning the quality of reticulated bulk potable supplies. Exclude queries (WB98a).  | Water quality complaints for areas where your utility did not carry out water treatment (ie. where the supply is obtained from a bulk supplier).<br><br>If the operator is uncertain whether the customer is DISSATISFIED, the operator should ask 'Do you wish to report a complaint on this matter?'.  |
| WB101b  | [C9]    | Complaints                     | Water quality complaints (treated supplies)                |         | n    | Complaints relating to water treated by your utility's treatment plants. Exclude queries (WB98a).  | Sum of water quality complaints for your treatment works (entered under Water Treatment/Service Levels NSW indicator number (WT37)).   |
| WB102   | [C13]   | Complaints                     | Total complaints   |         | n    | Sum of (WB96) + (WB99) + (WB100) + (WB101a) + (WB101b).  |  |
| WB103   | C14     | Telephone connect time         | Percent of calls answered by an operator within 30 seconds |         | %    | Percentage of calls answered by an operator within 30 seconds. If a percentage is provided for Sewerage indicator (WB41), do not provide a percentage here.  | If your utility does not record the 'time to connect to telephone' leave this indicator blank. Exclude calls resolved by automated systems, hang-ups or where the customer has selected an incorrect dialing option.<br><br>Examples: if a customer elects to speak with an operator via automatic dialling, the connect time is from the time when the customer was connected by the system until it is answered by an operator. The connect time starts when the call gets connected by person, (in which case the connect time would be zero), by an auto attendant (IVR) or by a message informing the caller they have been put in a queue. The connect time finishes when the caller is answered by a person. If the caller hangs up before they speak to a person, the call is not counted. Similarly, if the caller's question is answered by an IVR, meaning they dont need to speak to an operator, the call is not counted. |
| WB104   | [A8]    | Unplanned supply interruptions | Water main breaks  |         | n    | Total number of water main breaks, bursts and leaks in all diameter water distribution and reticulation mains. Includes potable and non-potable water mains.   | Exclude: Breaks in the property service connection; weeps and seepages in above-ground mains that can be fixed without shutting down the main.   |
| WB105   |         | Unplanned supply interruptions | Property service connection failures                       |         | n    | Unplanned incidents where water is lost due to failure of a property service connection.   | Exclude a burst or leak which causes no discernible impact on customers, property or the environment.  |
| WB106   | [C17]   | Unplanned supply interruptions | Incidence of unplanned interruptions                       |         | n    | Incidence of unplanned interruptions is the number of connected properties affected by a total loss of the potable water supply service due to failure of the water asset. An unplanned interruption is a total loss of water supply due to failure of the water asset.  | An unplanned interruption is when the customer has not received at least 24 hours notification of the interruption. Interruptions include both potable and recycled interruptions. Include each occurrence of interruption. Exclude interruptions caused by burst or leaks in the property service connection and interruptions where there is some reduction to service but where normal activities (eg. shower, washing machine, toilet flushing etc) are still possible.  |
| WB107   | [C15]   | Unplanned supply interruptions | Average duration   |         | min  | <p>The average duration for which a customer is without potable water supply for the reporting period due to an unplanned interruption.</p> <p>A water supply interruption is any event causing a total loss of water supply due to any cause. Interruptions do not include those caused by bursts or leaks in the property service (mains to meter connection) unless the burst or leak requires the mains to be shut down for repair.</p> <p>An unplanned water supply interruption is when the customer has NOT received at least 24 hours notification (or as otherwise prescribed by regulatory requirements) of the interruption. It also includes situations where the duration of a planned interruption exceeds that which was originally notified. In this circumstance the length of the entire interruption is counted. All un-notified interruptions caused by third parties should be included.</p> <p>An interruption commences when the water utility is aware that 'water is no longer available at the customer's first cold water tap and ceases 'when "normal" service is restored'.</p> <p>Where the utility is aware of a water supply interruption through its internal systems alarms, the duration commences when the alarm is raised.</p> <p>If a customer notifies the water utility they are without water, the duration commences at the time of notification. If the water utility is responding to a notification of a broken main, unless this notification also indicates a loss of supply, the duration commences once the break is isolated (if repairs are not being done under pressure).</p> | <p>If the utility responds to notification of a broken main, unless the notification also indicates a loss of supply, duration commences once the break is isolated.</p> <p>Examples - A utility advises customers an interruption will occur and will last 3 hours. The actual duration is 5 hours. The unplanned interruption duration is 5 hours. - A customer calls advising they are without water. The interruption commences at the time of notification. - A customer calls advising of a broken main. Unless the notification also indicates a loss of supply, the interruption commences when staff arrive at the main and isolate the break. - Mains are shut down due to fire fighting requirements. This interruption is included and commences at the time the mains are shut down. Include un-notified interruptions caused by third parties.</p>   |
| Health  |         |                                |  |         |      |  |  |
| WB113   | H6      | Water quality management       | Risk-based drinking water quality plan?                    |         | Y/N  | <p>Minimum requirement for answering 'yes' is a documented water quality management system in accordance with page 2-1 of the Australian Drinking Water Quality Guidelines 2011. Any other more rigorous plans are also satisfactory.</p> <p>Note: Commencing in the 2014-15 financial year, the minimum requirement will be a Drinking Water Quality System in accordance with the 'NSW Guidelines for drinking water systems, NSW Health and NSW Office of Water', 2013 (www.health.nsw.gov.au/publichealth/environment).</p> <p>The Drinking Water Quality System will need to be independently audited in order to comply with the Public Health Act 2010 and to report 'Yes' for 'Externally Assessed - NWI Indicator H5' (WB113a).</p>   |  |
| WB113a  |         | Water quality management       | Specify planning framework                                 |         |      | State the basis for your Drinking Water Management System.   | Examples: NSW Guidelines for Drinking Water Management Systems, 2013; Framework for Management of Drinking Water Quality, HACCP, ISO 9001, WSAA (National Water Quality Framework Continuous Improvement Tool).  |

# Water business data

| NSW No.          | NWI No. | Indicator Group          | Reported Indicator                                      | 2014/15 | Unit | Indicator Definition  | Instruction   |
|------------------|---------|--------------------------|---|---------|------|---|---|
| WB114            | H5      | Water quality management | External assessment of plan                             |         |      | State the basis for the external accreditation.   | For each external assessment, external third party accredited assessments must have taken place within the last 12 months. The scope of these quality systems must cover the entire water business water quality management system. If the quality system covers a more limited area, the indicated quality system must be footnoted with a description of the area covered. Commencing in the 2014-15 financial year, assessments must be independently audited in accordance with NSW Guidelines for Drinking Water Management Systems, 2013.   |
| WB114a           |         | Water quality management | Water Supply distribution system integrity examination? |         | Y/N  | Did your LWU carry out a detailed examination of the integrity of your water supply distribution systems in accordance with Circular LWU 18 of 4 June 2014 in this financial year? Note that a detailed examination is required at least every 4 years (or more frequently if warranted by your LWU's risk assessment or if the free chlorine residual at the extremities of a distribution system is below 0.2mg/L). | Refer also to Appendix E of 2013-14 NSW Benchmarking Report ( <a href="http://www.water.nsw.gov.au">www.water.nsw.gov.au</a> ). LWU Circulars can be accessed in the Trade Waste section of the NSW Performance Monitoring Database.  |
| WB114b           |         | Water quality management | Summary of Distribution System Deficiencies identified  |         |      | Examples of deficiencies are shown in the Instructions. Indicate the name of the distribution system in each case.  | Examples: (1) Mesh openings are too large or the reservoir roof design is deficient, allowing entry of small birds, vermin, rain water and windblown material to contaminate the stored water. The roof design and/or the mesh must be modified to rectify. - refer to page 10 of the 2013-14 NSW Benchmarking Report ( <a href="http://www.water.nsw.gov.au">www.water.nsw.gov.au</a> ). (2) Rain can enter the reservoir from the roof drainage system or a leaking reservoir roof, holes in the reservoir wall or gaps around the openings on the roof – rectify. (3) Inspection hatches not closed and locked at all times or the reservoir site and roof are not secured from unauthorised access – rectify. Refer also to Appendix E of 2013-14 NSW Benchmarking Report ( <a href="http://www.water.nsw.gov.au">www.water.nsw.gov.au</a> ). |
| WB114c           |         | Water quality management | Distribution System Deficiencies Rectified?             |         | Y/N  | Indicate the name of the distribution system in each case in Indicator (WB114b).  | Any deficiencies in distribution system integrity identified in Indicator 114b should be rectified as a matter of priority in accordance with Circular LWU 18 of 4 June 2014.   |
| WB114d           |         | Water quality management | Provided summary report to DPI Water?                   |         | Y/N  | Summary Report provided to DPI Water following investigation of the integrity of each water supply distribution system?   |   |
| WB115            |         | Public health incidents  | Category 1 incidents                                    |         | n    | Incidents with nil or inconsequential public health effects.  | Example: a minor failure of a water treatment process or asset that results in a limited boil water alert. Examples of Category 1, 2 or 3 Public Health and/or Environmental Incidents are shown on page 237 of the 2013-14 NSW Water Supply and Sewerage Benchmarking Report ( <a href="http://www.water.nsw.gov.au/_data/assets/pdf_file/0006/562758/nsw_water_supply_and_sewerage_benchmarking_report_2013_14.pdf">http://www.water.nsw.gov.au/_data/assets/pdf_file/0006/562758/nsw_water_supply_and_sewerage_benchmarking_report_2013_14.pdf</a> ).  |
| WB116            |         | Public health incidents  | Category 2 incidents                                    |         | n    | Incidents with a limited public health impact.  | Examples: non-compliance with health parameters (E. coli) of ADWG, 2011 for more than 7 days; system-wide boil water notice; failure of a disinfection system of more than 3 days; failure of a major treatment process or asset at a treatment works of more than 4 days; chlorine or ammonia gas leak (chlorination/chloramination); non-pathogenic/toxic contamination of the potable water supply due to a cross connection; an incident resulting in unplanned interruptions to supply of more than 2 days (if more than 7 days report as Category 3).   |
| WB117            |         | Public health incidents  | Category 3 incidents                                    |         | n    | Incidents with a major impact on public health.   | Examples: outbreak of water borne disease and/or hospitalisation from water supplied by your utility's water supply system; an incident resulting in unplanned interruptions to supply of more than 7 days; pathogenic contamination of the potable water supply due to a cross connection; toxic contamination of water supply.  |
| WB118            |         | Public health incidents  | Category 3 incidents - detail                           |         |      |   |   |
| WB119            |         | Public health investment | Capital investment to improve health performance        |         | \$k  | Capital expenditure with the principal outcome of improved health performance.  | This indicator highlights public health improvement and innovation. Include expenditure undertaken for compliance purposes having IMPROVED performance as an outcome. Include new treatment works. Exclude renewals. (Enter \$111,500 as 111.5, \$3,999,000 as 3999 etc).   |
| <b>Workforce</b> |         |                          |   |         |      |   |   |
| WB120            |         | Workforce and training   | Total workforce in water business                       |         | FTE  | A full-time employee has an FTE of 1. Part-time and casual employees will have an FTE of less than one based on hours employed.   | Include water supply business workforce engaged in operation, maintenance and management including billing as well as contracted staff. Exclude staff engaged on design and construction.   |
| WB121            |         | Workforce and training   | Female workforce  |         | FTE  |   |   |
| WB122            |         | Workforce and training   | Workforce receiving 2 or more training days             |         | FTE  | The training days FTE of water supply business employees that have undertaken at least 2 days of training in the reporting year. This number will be less than or equal to the workforce FTE.   | The training days FTE of a casual or part-time employee is the FTE of that employee multiplied by the number of days that employee trained in the reporting year.   |
| WB123            |         | Days lost                | Total days lost   |         | FTE  | Total FTE days lost for water supply business.  | Include days lost due to workplace injury, sick leave and industrial action. Exclude recreation leave, long-service leave, public holidays, rostered days off or flexi-leave, maternity leave, jury duty, leave for Army Reserve training, etc. Exclude days lost for staff engaged in design or  |
| WB124            |         | Days lost                | Confirmed injuries                                      |         | n    | Include water supply business injuries that resulted in a fatality, permanent disability or time lost from work of one day or more. Include injuries for equivalent contractor employees. Exclude injuries for employees engaged in design or construction.   |   |
| WB125            |         | Days lost                | Days lost due to injury                                 |         | FTE  | Total FTE days lost due to injury.  | Include days lost for injuries for equivalent contractor employees. Exclude days lost for injuries for employees engaged in design or construction.   |
| WB128            |         | Workforce outsourced     | Management costs outsourced                             |         | %    | The percentages expended by the water supply business on outsourcing of management, operational and maintenance costs.  |   |
| WB129            |         | Workforce outsourced     | Operational costs outsourced                            |         | %    |   |   |
| WB130            |         | Workforce outsourced     | Maintenance costs outsourced                            |         | %    |   | Outsourcing is subcontracting part of the operation and/or management of a utility's business to a third party, where the subcontractor undertakes work that would normally be done by the utility's workforce. Include legal work, electrical maintenance, operation of a treatment works etc.   |

Water business data

| NSW No.                     | NWI No. | Indicator Group                    | Reported Indicator  | 2014/15 | Unit     | Indicator Definition  | Instruction  |
|-----------------------------|---------|------------------------------------|---|---------|----------|---|--|
| Expenses, Charges And Bills |         |                                    |   |         |          |   |  |
| WB131                       |         | Community                          | Reduction in fees and charges to community organisations  |         | \$k      | The value of reductions in fees or charges permitted by legislation which are provided by your water supply business to the community. Exclude pensioner rebates.   | Utilities may elect to provide reduced fees and charges for certain non-profit and community organisations and charities (including non-rateable properties) as permitted by legislation. This indicator reports the total amount of reductions provided to such community organisations in comparison with the standard fees and charges for non-residential customers.   |
| WB131a                      |         | Community                          | Progress towards implementing the National Guidelines for Residential Customers' Water Accounts |         | %        | Estimate your utility's percent progress towards implementing the National Guidelines for Residential Customers' Water Accounts, 2006 (available at <a href="http://www.environment.gov.au">www.environment.gov.au</a> ).   |  |
| WB132a                      | C18     | Community                          | Restrictions for non-payment of water bill  |         | n        | Restrictions and disconnections applied for non-payment of water bills in the reporting period.   | Include: all cases where restriction devices are fitted to reduce water flows to a customer (residential and non-residential). Multiple restrictions for one customer are to be counted as separate restrictions. Exclude: customers who choose to disconnect from the water supply; disconnections carried out due to unsafe infrastructure connected to the water utility's system; instances where your utility elects not to restrict supply due to non-payment. |
| WB132b                      | C19     | Community                          | Legal action for non-payment of water bill  |         | n        | Legal actions for non-payment of water bills in the reporting period.   | Legal action commences from issue of summons. Include action taken against both residential and non-residential customers. Multiple actions against one customer are to be counted as separate actions. Exclude cases where your utility threatens to take legal action but does not   |
| WB133                       |         | Operation and Maintenance expenses | Headworks   |         | %        | Financial data is provided by your utility in Special Schedule No.3 to the Annual Financial Statements, specifically 'Operation and Maintenance Expenses'. Divide this total into 'headworks' and 'distribution and reticulation'.  | Headworks and reticulation OMA are percentages estimated from your operations over the last year. Special Schedule 3 can be used to estimate this by assigning part or all of each OMA expense to either headworks or reticulation.  |
| WB134                       |         | Operation and Maintenance expenses | Distribution and reticulation   |         | %        |   | See (WB133).   |
| WB135                       |         | Developer charges                  | Typical developer charge for this reporting year  |         | \$       | This is the typical developer charge determined by your utility to recover part of the cost of water supply infrastructure for new development.   |  |
| WB136                       |         | Developer charges                  | Typical developer charge for next reporting year  |         | \$       |   |  |
| Environment                 |         |                                    |   |         |          |   |  |
| WB137                       |         | Environmental incidents            | Category 1 incidents  |         | n        | Incidents with little or no impact on the environment.  | Examples: a reportable incident but not a breach of environmental regulations; an incident resulting in under 4 days of odour or noise complaints; a minor spillage of non-toxic chemicals or sludge to waterway or land.  |
| WB138                       |         | Environmental incidents            | Category 2 incidents  |         | n        | Incidents with limited and non-permanent impact on the environment.   | Examples: a minor breach of environmental regulations eg. non maintenance of the required environmental flows, an incident resulting in over 4 days of odour or noise complaints, a major soil erosion incident requiring remediation, a significant chemical or sludge spill to waterway or land.   |
| WB139                       |         | Environmental incidents            | Category 3 incidents  |         | n        | Incidents with major and irreversible impact on the environment.  | Examples: a major breach of environmental regulations, a dam failure, a severe algal outbreak in storages/waterways, a major toxic chemical or sludge spill into waterways, widespread destruction of native forests/ecosystems.   |
| WB140                       |         | Environmental incidents            | Category 3 incidents detail   |         |          |   |  |

|--|---------|----------------------------------|---|---------|----------|---|---|
| WB148b                                   | E11     | Greenhouse gas emissions - water | Net administrative emissions  |         | t CO2 eq | Net greenhouse gas emissions for other water supply activities (transport, office buildings and sequestration).   | See (WB148a).   |
| <b>Integrated Water Cycle Management</b> |         |                                  |   |         |          |   |   |
| WB94a                                    |         | Rainwater tanks                  | Number of residential rainwater tanks                               |         | No.      | Total number of residential rainwater tanks in your area used as a supplementary water supply for serving urban areas (towns and villages) serviced by your water utility.  | Excludes commercial, industrial and municipal premises. Excludes reticulated urban stormwater use and greywater collection tanks. Excludes rainwater tanks used for stormwater attenuation.   |
| WB94b                                    |         | Rainwater tanks                  | Typical rainwater tank volume                                       |         | kL       | Typical volume of residential rainwater tanks in your area (WB94a).   |   |
| WB94c                                    |         | Rainwater tanks                  | Total volume of rainwater tanks - Commercial                        |         | kL       | Total volume of rainwater tanks for commercial premises in your area.   |   |
| WB94d                                    |         | Rainwater tanks                  | Total volume of rainwater tanks - Industrial                        |         | kL       | Total volume of rainwater tanks for industrial premises in your area.   |   |
| WB94e                                    |         | Rainwater tanks                  | Number of rainwater tanks used for stormwater attenuation           |         | No.      | Total number rainwater tanks where 'emptiness' is provided for stormwater attenuation.  | Eg. tanks remain empty, or not more than say 50% full in order to provide capacity for stormwater attenuation. Excludes reticulated urban stormwater use.   |
| WB94f                                    |         | Rainwater tanks                  | Percentage of rainwater tank 'emptiness' for stormwater attenuation |         | %        | Typical percentage of rainwater tank 'emptiness' for stormwater attenuation for the rainwater tanks in (WB94c).   |   |
| WB95a                                    |         | Water Sensitive Urban Design     | WSUD implementation – new lots – residential                        |         | No.      | Total number of lots in new residential subdivisions where Water Sensitive Urban Design (WSUD) has been implemented by your Council.  | Includes WSUD implementation of stormwater filtration devices (bio-retention gardens, sediment basins, rain gardens, sand filters, swales, wetlands, infiltration trenches, porous paving), urban stormwater harvesting and use, ponds, stormwater outlet protection, buffer strips, dispersal trenches, urban creek design with habitat value, planting of natural vegetation, impervious area minimisation, and rainwater tanks for public parks and gardens. |
| WB95b                                    |         | Water Sensitive Urban Design     | WSUD implementation – new lots – commercial                         |         | No.      | Total number of lots in new commercial subdivisions where Water Sensitive Urban Design (WSUD) has been implemented by your Council.   | See (WB95a). Includes car parks.  |
| WB95c                                    |         | Water Sensitive Urban Design     | WSUD implementation – new lots – industrial                         |         | No.      | Total number of lots in new industrial subdivisions where Water Sensitive Urban Design (WSUD) has been implemented by your Council.   | See (WB95a). Includes car parks.  |
| WB95d                                    |         | Water Sensitive Urban Design     | WSUD implementation – existing lots – residential                   |         | No.      | Total number of lots in existing residential development areas where Water Sensitive Urban Design (WSUD) has been implemented retrospectively.  | See (WB95a) for information on WSUD implementation.   |
| WB95e                                    |         | Water Sensitive Urban Design     | WSUD implementation – existing lots – commercial                    |         | No.      | Total number of lots in existing commercial development areas where Water Sensitive Urban Design (WSUD) has been implemented retrospectively.   | See (WB95a). Includes car parks.  |
| WB95f                                    |         | Water Sensitive Urban Design     | WSUD implementation – existing lots – industrial                    |         | No.      | Total number of lots in existing industrial development areas where Water Sensitive Urban Design (WSUD) has been implemented retrospectively.   | See (WB95a). Includes car parks.  |
| WB95g                                    |         | Water Sensitive Urban Design     | Stormwater channels managed under WSUD principles                   |         | km       | Total length of urban creeks and trunk stormwater drainage channels within the stormwater catchment that are managed under 'liveable towns and cities' or Water Sensitive Urban Design (WSUD) principles. See (WB95a) for information on WSUD implementation. | Includes urban creeks and trunk stormwater drainage channels within the stormwater catchment upstream of the stormwater discharge point. The stormwater discharge point includes discharge points into watercourses and marine water bodies and points where stormwater is exported to another stormwater drainage system operator.   |
| WB95h                                    |         | Water Sensitive Urban Design     | Development Control Plan for WSUD?                                  |         | Y/N      | Does your Council have a Regional Development Control Plan which requires 'liveable towns and cities' development or Water Sensitive Urban Design (WSUD) for new developments?  | See (WB95a) for information on WSUD implementation.   |
| WB95i                                    |         | Water Sensitive Urban Design     | Development Control Plan details                                    |         | -        | If 'Yes' was answered for 95h, provide the name, date and web link of the Development Control Plan.   |   |
| WB95j                                    |         | Water Sensitive Urban Design     | Stormwater Harvesting   |         | Y/N      | Does your Council have infrastructure in place for urban stormwater harvesting? Uses may include irrigation of sports fields and parks, agriculture or industrial uses.   | Excludes stormwater supplied for managed aquifer recharge.  |
| WB95k                                    |         | Water Sensitive Urban Design     | Price for urban stormwater use                                      |         | c/kL     | Price (c/kL) for urban stormwater use in your utility's area.   | Guidance on suitable water pricing for urban stormwater use is available in the NWI Pricing Principles (2010) [ <a href="http://www.environment.gov.au/water/publications/action/nwi-pricing-principles.html">http://www.environment.gov.au/water/publications/action/nwi-pricing-principles.html</a> ].  |
| WB95l                                    |         | Water Sensitive Urban Design     | Annual budget for maintaining WSUD systems                          |         | \$       |   |   |
| WB95m                                    |         | Water Sensitive Urban Design     | Are your WSUD systems maintained at the required frequency?         |         | Y/N      | The required frequency may have been determined at the project design phase, or is determined as the frequency required for proper functioning of the WSUD system.  |   |
| WB95n                                    |         | Water Sensitive Urban Design     | No. of staff (FTE) maintaining your WSUD systems                    |         | No.      |   |   |
| WB95o                                    |         | Water Sensitive Urban Design     | What is your annual stormwater levy per assessment?                 |         | \$       |   |   |

|------------------|---------|-----------------|--|---------|------|--|---|
| Sampling Results |         |                 |  |         |      |  |   |
| WT26             |         | E.coli          | Number of system samples               |         | n    | Include samples taken at this treatment works for system performance monitoring. Exclude samples for operational monitoring.   | <p>System performance monitoring is a wide ranging assessment of the quality of the water supplied to customers. Operational monitoring is used as a trigger for immediate corrective action to improve water quality and to check equipment is working properly. Sampling location and frequency should be scheduled sampling on the basis of page 235 of the 2013-14 NSW Water Supply and Sewerage Benchmarking Report and ADWG 2011.</p> <p>The number of samples reported should be those taken for system performance monitoring from representative locations in the water supply system and not those taken for operational monitoring.</p> <p>In the reporting up to and including 2011-12, the reporting of additional samples to those reported in the NSW Health Drinking Water Quality Program has been accepted for those LWUs that have confirmed that they have undertaken additional sampling to that required by the Drinking Water Program.</p> <p>Commencing in the 2012-13 financial year, the reported results are restricted to those tested by NSW Health or by a NATA accredited laboratory. [Refer also to the final sentence of Note 4 on page 288 of the 2013-14 NSW Water Supply and Sewerage Benchmarking Report (<a href="http://www.water.nsw.gov.au/__data/assets/pdf_file/0006/562758/nsw_water_supply_and_sewerage_benchmarking_report_2013_14.pdf">http://www.water.nsw.gov.au/__data/assets/pdf_file/0006/562758/nsw_water_supply_and_sewerage_benchmarking_report_2013_14.pdf</a>)].</p> |
| WT26a            |         | E.coli          | Number of system samples - DOH results |         | n    | *Results from the NSW Health Drinking Water Database for this treatment works.   |   |
| WT27             | H2      | E.coli          | Percent complying                      |         | %    | Number of samples taken for system compliance monitoring divided by the total number of such samples. Water quality compliance data for each treatment works will be used to determine NWI indicators H2, H3 and H4. | It is neither physically nor economically feasible to test on an ongoing basis for all substances in a water supply system. Each water supply system will have its own key characteristics. It is therefore common for water utilities to monitor regularly for contaminants such as disinfection by-products whereas a wide range of other non-key characteristics will only be monitored irregularly.   |

| SB7            | [A5]    | Sewage mains                         | Gravity (reticulation) length  |         | km   | Length of mains, including trunk and reticulation mains, aqueducts etc. of all diameters.  | Exclude pressure (rising) mains. Exclude property or house connections and conduits carrying treated effluent.   |
| SB8            | [A5]    | Sewage mains                         | Pressure (rising) length   |         | km   | Length of pressure (rising) mains.   |  |
| SB9            | A5      | Sewage mains                         | Total length   |         | km   | Sum of (SB7) + (SB8).  |  |
| SB10           |         | Renewals                             | Mains renewed or replaced in reporting year                              |         | km   |  | Include existing mains renewed or replaced in the reporting year. Exclude maintenance work (Sect 5 of NSW Local Government Asset Accounting Manual, 1999). Refer also to page 66 of the NSW Water and Sewerage Strategic Business Planning Guidelines, 2011 ( <a href="http://www.water.nsw.gov.au/ArticleDocuments/36/utilities_nsw_water_sewerage_strategic_planning_guidelines.pdf.aspx">http://www.water.nsw.gov.au/ArticleDocuments/36/utilities_nsw_water_sewerage_strategic_planning_guidelines.pdf.aspx</a> ). |
| SB11           |         | Renewals                             | Property connections renewed or replaced in reporting year               |         | n    | A house or property connection is a short sewer owned and operated by your utility which connects the main sewer and the customer sanitary drain.  |  |
| Connections    |         |                                      |  |         |      |  |  |
| SB12           |         | New connections                      | New residences connected   |         | n    | Number of new residences connected to sewerage this reporting year. INCLUDES connections resulting from backlog schemes (indicator SB12a).   | Include each individual flat, villa, unit, townhouse etc. whether separately metered or not.   |
| SB12a          |         | New connections                      | New residences connected - backlog scheme                                |         | n    | New residences connected to sewerage as a result of connection of a backlog scheme, not residential growth.  | This is a component of indicator (SB12).   |
| SB13           | [C6]    | Assessments                          | Residential  |         | n    | Residential assessments for sewerage services. Include vacant lots.  |  |
| SB14           | [C7]    | Assessments                          | Non-residential  |         | n    | Non-residential assessments for sewerage services. Include vacant lots.  |  |
| SB17           | [C8]    | Assessments                          | Total assessments  |         | n    | Sum of (SB13) + (SB14).  |  |
| SB13a          | [C6]    | Assessments                          | Residential assessments - ADOPTED BY DPI WATER AFTER DATA VALIDATION     |         | n    | Residential assessments ADOPTED BY DPI WATER after data validation.  | Refer to Appendix H of Benchmarking Report.  |
| SB14a          | [C7]    | Assessments                          | Non-residential assessments - ADOPTED BY DPI WATER AFTER DATA VALIDATION |         | n    | Non-residential assessments ADOPTED BY DPI WATER after data validation.  | Refer to Appendix H of Benchmarking Report.  |
| SB17a          | [C8]    | Assessments                          | Total assessments - ADOPTED BY DPI WATER AFTER DATA VALIDATION           |         | n    | Total assessments ADOPTED BY DPI WATER after data validation.  | Refer to Appendix H of Benchmarking Report.  |
| SB18           | [C8]    | Connected Property Assessment ratios | Connected properties / total assessments                                 |         | n    | See notes for (SB19).  |  |
| SB18a          | [C6]    | Connected Property Assessment ratios | Residential assessments / total assessments                              |         | n    | See notes for (SB19).  |  |
| SB19           | [C6]    | Connected Property Assessment ratios | Connected residential properties / residential assessments               |         | n    | These ratios do not vary significantly from year to year for sewerage systems. NOW has worked with LWUs to establish these ratios and will continue to use the existing ratio shown. If you consider that another ratio is more appropriate, you will need to provide detailed evidence to NOW to support such a change. Evidence that would be required includes the number of residential (single and multi) and non-residential assessments and connected properties from your financial, water and sewerage reports over the last 3 years together with details of vacant lots and new properties connected. Note that ratios are stored as floating decimals but are displayed on this page to two decimal places only. | Connected properties are not the same as assessments. Connected properties rather than assessments are used for consistency with the National Performance Framework. A connected property is one which is connected to the sewerage system but which may or may not have a separate assessment.  |

Sewerage business data

| NSW No.        | NWI No. | Indicator Group            | Reported Indicator  | 2014/15 | Unit | Indicator Definition   | Instruction   |
|----------------|---------|----------------------------|---|---------|------|--|---|
| SB13b          | C6      | Connected Properties       | Residential connected properties - ADOPTED BY DPI WATER AFTER DATA VALIDATION     |         | n    | Residential connected properties calculated by multiplying ADOPTED residential assessments (SB13a) with the connected residential properties - residential assessment ratio (SB19).  | Refer to Appendix H of Benchmarking Report.   |
| SB14b          | C7      | Connected Properties       | Non-residential connected properties - ADOPTED BY DPI WATER AFTER DATA VALIDATION |         | n    | Non-residential connected properties calculated by subtracting ADOPTED residential connected properties (SB13b) from ADOPTED total connected properties (SB17b).   | Refer to Appendix H of Benchmarking Report.   |
| SB17b          | C8      | Connected Properties       | Total connected properties - ADOPTED BY DPI WATER AFTER DATA VALIDATION           |         | n    | Total connected properties calculated by multiplying ADOPTED total assessments (SB17a) with the connected property - total assessment ratio (SB18).  | Refer to Appendix H of Benchmarking Report.   |
| SB20           |         | Unserved in reporting year | Unserved urban properties   |         | n    | Number of properties in urban zoned land in towns and villages in your utility's area of operations that are not served by a reticulated public sewerage service.  | Exclude premises in land zoned rural residential. Information on the unserved urban properties and population of each village is available in your LWU's sewerage strategic business plan.  |
| SB21           |         | Unserved in reporting year | Unserved urban population   |         | n    | Estimated permanent population in unserved urban properties.   |   |
| SB21a          |         | Unserved in reporting year | Unserved urban population - ADOPTED BY DPI WATER AFTER DATA VALIDATION            |         | n    | Unserved urban population ADOPTED BY DPI WATER after data validation.  | Refer to Appendix H of Benchmarking Report.   |
| Service Levels |         |                            |   |         |      |  |   |
| SB34           | [C11]   | Complaints                 | Sewage chokes   |         | n    | Complaints relating to sewage chokes. Exclude odour, billing and sewerage service complaints. Exclude queries.   | Exclude complaints relating to property connections.<br><br>If the operator is uncertain whether the customer is DISSATISFIED, the operator should ask 'Do you wish to report a complaint on this matter?'.   |
| SB38           | [C11]   | Complaints                 | Service   |         | n    | Complaints other than chokes, odour or billing. Exclude queries.   | Include complaints concerning sewerage system reliability, trade waste services, behaviour of staff and all other sewerage issues. Exclude complaints about chokes, odour or billing. Australian Standard AS ISO 10002-2006 refers.<br><br>If the operator is uncertain whether the customer is DISSATISFIED, the operator should ask 'Do you wish to report a complaint on this matter?'.  |
| SB35           |         | Complaints                 | Frequent service complaint 1  |         |      | Most frequent service complaints should be entered in these two fields.  |   |
| SB36           |         | Complaints                 | Frequent service complaint 2  |         |      |  |   |
| SB36a          |         | Complaints                 | Customer contacts/inquiries   |         | n    | A request by a customer for information about a product or service provided by the sewerage utility (eg. 'an inquiry on their dual flush toilet') that does not indicate customer dissatisfaction. The customer may also call to advise the utility of asset condition (eg. report that a 'red light' is on at sewage pump station No. 200). |   |
| SB37           | [C12]   | Complaints                 | Billing   |         | n    | Complaints concerning account payment, financial loss or overcharging and billing errors. Exclude queries.   | Exclude complaints about government pricing policy, the tariff structure or queries about how the tariff is calculated.<br><br>If the operator is uncertain whether the customer is DISSATISFIED, the operator should ask 'Do you wish to report a complaint on this matter?'.  |
| SB39           | [C11]   | Complaints                 | Odour   |         | n    | Sum of odour complaints for treatment works, pumping stations and pipe network in your sewerage business.  | See Sewage Treatment/Service Levels NSW Indicators (ST68) and (ST69).<br><br>If the operator is uncertain whether the customer is DISSATISFIED, the operator should ask 'Do you wish to report a complaint on this matter?'.  |
| SB40           | [C13]   | Complaints                 | All complaints  |         | n    | Sum of complaints: (SB34) + (SB37) + (SB38) + (SB39).  | A complaint is a written or verbal expression of dissatisfaction about an action, proposed action or failure to act by the water utility, its employees or contractors. Complaints from separate customers arising from the same cause count as separate complaints. Includes complaints received by the utility in person, by mail, by fax, phone, email or text message.<br><br>If the operator is uncertain whether the customer is DISSATISFIED, the operator should ask 'Do you wish to report a complaint on this matter?'. |

Sewerage business data

| NSW No.   | NWI No. | Indicator Group          | Reported Indicator   | 2014/15 | Unit | Indicator Definition  | Instruction  |
|-----------|---------|--------------------------|--|---------|------|---|--|
| SB41      | C14     | Telephone connect time   | Percent of calls answered by an operator within 30 seconds |         | %    | Percentage of calls answered by an operator within 30 seconds. If a percentage is provided for Water indicator (WB103), do not provide a percentage here.   | <p>If your utility does not record the 'time to connect to telephone' leave this indicator blank. Exclude calls resolved by automated systems, hang-ups or where the customer has selected an incorrect dialing option.</p> <p>Examples: if a customer elects to speak with an operator via automatic dialing, the connect time is from the time when the customer was connected by the system until it is answered by an operator. The connect time starts when the call gets connected by person, (in which case the connect time would be zero), by an auto attendant (IVR) or by a message informing the caller they have been put in a queue. The connect time finishes when the caller is answered by a person. If the caller hangs up before they speak to a person, the call is not counted.</p> <p>Similarly, if the caller's question is answered by an IVR, meaning they don't need to speak to an operator, the call is not counted.</p> |
| SB43      | [C16]   | Unplanned interruptions  | Average break or choke repair time                         |         | min  | Measured from time when utility is aware that sewerage services are no longer available. This is an average based on the total minutes of all interruptions divided by the total number of  | Exclude planned interruptions, repair times relating to breaks, chokes and leaks in the property connection and time for site restoration. Include un-notified interruptions caused by third parties.  |
| Health    |         |                          |  |         |      |   |  |
| SB44      |         | Public health incidents  | Category 1 incidents                                       |         | n    | Incidents with no or inconsequential public health effects.   | Example: minor failure of sewage treatment processes.  |
| SB45      |         | Public health incidents  | Category 2 incidents                                       |         | n    | Incidents with a limited public health impact.  | Examples: an algal outbreak in receiving waters attributable to sewerage system; issue of public no-contact notice with receiving waters; sewer overflow affecting public access to land or water; sewage contamination of fishing or recreational water areas; a failure of effluent disinfection system; a failure of major treatment processes at a treatment works of more than 4 days; an incident resulting in unplanned interruptions to service of more than 3 days (if more than 20 days, report as Category 3); a chlorine leak.   |
| SB46      |         | Public health incidents  | Category 3 incidents                                       |         | n    | Incidents with a major impact on public health.   | Examples: an outbreak of water borne disease due to sewerage system; hospitalisations from water borne disease due to sewerage system; contamination of an oyster farming area; sewer overflow into a water supply catchment; an incident resulting in unplanned interruptions to service of more than 20 days.  |
| SB47      |         | Public health incidents  | Category 3 incidents detail                                |         |      |   |  |
| SB48      |         | Public health investment | Capital investment to improve health performance           |         | \$k  | Capital expenditure with the principal outcome of improved health performance.  | This indicator highlights public health improvement and innovation. Include expenditure undertaken for compliance purposes having IMPROVED performance as an outcome. Include new treatment works. Exclude renewals. (Enter \$111,500 as 111.5, \$3,999,000 as 3999 etc).  |
| Workforce |         |                          |  |         |      |   |  |
| SB49      |         | Resources and training   | Total workforce in sewerage business                       |         | FTE  | A full-time employee has an FTE of 1. Part-time and casual employees will have an FTE of less than one based on hours employed.   | Include sewerage business employees engaged in operation, maintenance and management including billing. Include equivalent contractor employees. Exclude employees engaged on design and construction.   |
| SB50      |         | Resources and training   | Female workforce   |         | FTE  |   |  |
| SB51      |         | Resources and training   | Workforce receiving 2 or more training days                |         | FTE  | The training days FTE of sewerage business employees that have undertaken at least 2 days of training in the reporting year. This number will be less than or equal to the workforce FTE.   | The training days FTE of a casual or part-time employee is the FTE of that employee multiplied by the number of days that employee trained in the reporting year.  |
| SB52      |         | Days lost                | Total days lost  |         | FTE  | Total FTE days lost for sewerage business.  | Include days lost due to workplace injury, sick leave and industrial action. Exclude recreation leave, long-service leave, public holidays, rostered days off or flexi-leave, maternity leave, jury duty, leave for Army Reserve training, etc. Exclude days lost for staff engaged in design or construction.   |
| SB53      |         | Days lost                | Confirmed injuries   |         | n    | Include sewerage business injuries that resulted in a fatality, permanent disability or time lost from work of one day or more. Include injuries for equivalent contractor employees. Exclude injuries for employees engaged in design or construction. |  |
| SB54      |         | Days lost                | Days lost due to injury                                    |         | FTE  | Total FTE days lost due to injury.  | Include days lost for injuries for equivalent contractor employees. Exclude days lost for injuries for employees engaged in design or construction.  |
| SB57      |         | Workforce outsourced     | Management costs outsourced                                |         | %    | The percentages expended by the sewerage business on outsourcing of management, operational and maintenance costs.  |  |
| SB58      |         | Workforce outsourced     | Operational costs outsourced                               |         | %    |   |  |
| SB59      |         | Workforce outsourced     | Maintenance costs outsourced                               |         | %    |   | Outsourcing is subcontracting part of the operation and/or management of a utility's business to a third party, where the subcontractor undertakes work that would normally be done by the utility's workforce. Include legal work, electrical maintenance, operation of a treatment works etc.  |

Sewerage business data

| NSW No.           | NWI No. | Indicator Group                             | Reported Indicator  | 2014/15 | Unit     | Indicator Definition  | Instruction   |
|-------------------|---------|---|---|---------|----------|---|---|
| Charges and Bills |         |   |   |         |          |   |   |
| SB60              |         | Community                                   | Reduction in fees and charges to community organisations                              |         | \$k      | The value of reductions in fees or charges permitted by legislation which are provided by the sewerage business to the community. Exclude pensioner rebates.  | Utilities may elect to provide reduced fees and charges for certain non-profit and community organisations and charities (including non-rateable properties) as permitted by legislation. This indicator reports the total amount of reductions provided to such community organisations in comparison with the standard fees and charges for non-residential customers.  |
| SB61              |         | Developer charges                           | Typical developer charge for this reporting year                                      |         | \$       | The typical developer charge per equivalent tenement determined to recover part of the cost of sewerage infrastructure for new developments.  |   |
| SB62              |         | Developer charges                           | Typical developer charge for next reporting year                                      |         | \$       |   |   |
| Environment       |         |   |   |         |          |   |   |
| SB63a             |         | Overflows                                   | Overflows   |         | n        | Include all overflows/surcharges in utility sewers, access chambers and pumping stations in any weather.  | Include contained and uncontained spills. Count each access chamber, pumping station etc. overflow as one overflow. Exclude spills or overflow caused by a blockage in the property connection sewer or customers house drains. Exclude overflows contained within emergency storages where there is no pollution of the environment.   |
| SB63b             | [E13]   | Overflows                                   | Reported overflows  |         | n        | Overflows/surcharges required to be reported to the environmental regulator.  | Exclude overflows/surcharges not required to be reported to the environmental regulator.  |
| SB64              | [A14]   | Breaks and chokes                           | Gravity (reticulation) main chokes and breaks   |         | n        | Confirmed partial or total blockages, or failures in a reticulation (gravity) sewer resulting in an interruption to the sewerage service.   | Exclude breaks and chokes in rising mains, property connections or chokes within customers house drains. Exclude pipelines carrying treated effluent.   |
| SB65              | [A14]   | Breaks and chokes                           | Rising (pressure) main chokes and breaks  |         | n        | Confirmed chokes, breaks and leaks in sewer rising (pressure) mains resulting in a significant interruption to the sewerage service.  |   |
| SB66              |         | Breaks and chokes                           | Sewer chokes and breaks attended within 5 hours                                       |         | n        |   |   |
| SB67              | [A15]   | Breaks and chokes                           | Chokes or breaks in property connections  |         | n        | Chokes, breaks or leaks in property connections resulting in an interruption to the sewerage service.   | Exclude blockages in customer's house drains (internal drains).   |
| SB69              |         | Environmental incidents                     | Category 1 incidents  |         | n        | Incidents with little or no impact on the environment.  | Examples: a reportable incident but not a breach of environmental regulations; an incident resulting in under 4 days of odour or noise complaints; a minor spillage of non-toxic chemicals or sludge to waterway or land.   |
| SB70              |         | Environmental incidents                     | Category 2 incidents  |         | n        | Incidents with limited and non-permanent impact on the environment.   | Examples: a minor breach of environmental regulations eg. non maintenance of the required environmental flows; an incident resulting in over 4 days of odour or noise complaints; a major soil erosion incident requiring remediation; a significant chemical or sludge spill to waterway or land.  |
| SB71              |         | Environmental incidents                     | Category 3 incidents  |         | n        | Incidents with major and irreversible impact on the environment.  | Examples: a dry weather sewer overflow; a major breach of environmental regulations; a major wet weather sewer overflow or an overflow for more than 3 hours; a failure of STW resulting in discharge of large volumes of untreated sewage to the environment; a major toxic chemical or sludge spill into waterways; widespread destruction of native forests/ecosystems; embankment failure of a sludge lagoon. |
| SB72              |         | Environmental incidents                     | Category 3 incidents detail   |         |          |   |   |
| SB73              |         | Environmental management                    | Environmental management plan?  |         | Y/N      |   |   |
| SB74              |         | Environmental management                    | Plan developed in consultation with other bodies including Catchment Management Board |         | Y/N      |   |   |
| SB75              |         | Environmental management                    | Environmental consultative process in place   |         | Y/N      |   |   |
| SB76              |         | Environmental management                    | Capital investment to improve environmental performance                               |         | \$k      | Capital expenditure with the principal outcome of improved environmental performance.   | This indicator highlights environmental improvement and innovation. Include expenditure undertaken for compliance purposes having IMPROVED performance as an outcome. Include new treatment works. Exclude renewals. (Enter \$111,500 as 111.5, \$3,999,000 as 3999 etc).   |
| SB77              |         | Energy                                      | Non-renewable energy  |         | MWh      |   |   |
| SB78              |         | Energy                                      | Renewable energy  |         | MWh      | Energy derived from accredited renewable sources used by the sewerage business.   |   |
| SB79              |         | Energy                                      | Total energy  |         | MWh      | Sum of (SB77) + (SB78).   |   |
| SB80a             | E10     | Greenhouse gas emissions - sewerage service | Operating emissions   |         | t CO2 eq | Greenhouse gas emissions for all operations relating to sewerage service.   | The Greenhouse Gas calculator provided to you by DPI Water will simplify this task (copy available in Appendix G on page 332 of the 2013-14 NSW Water Supply and Sewerage Benchmarking Report).   |
| SB80b             | E11     | Greenhouse gas emissions - sewerage service | Net administrative emissions  |         | t CO2 eq | Net greenhouse gas emissions for other sewerage service activities (transport, office buildings and sequestration). If your utility cannot split this value between sewerage and water, leave this field blank and place the consolidated value under water business at NSW Indicator (WB148b). | See (SB80a).  |

| ST64             | E7      | Compliance summary                      | Compliance with environmental regulators   |         | Y/N        | Compliance occurs when the licence conditions prescribed for the treatment plant and all attached system components (network, treatment, recycling and disposal) have been met.   | Non-compliance is where your utility did not meet licence conditions, or received a financial penalty (>\$10,000) or had any successful litigation against it, by the environmental regulator. Include: penalties relating to infringements occurring in a previous reporting year.   |
| ST65             |         | Compliance summary                      | Penalty or litigation for non-compliance   |         | Y/N        | Include successful litigation against your utility by an environmental regulator, a financial penalty, any other penalty imposed by an enviromental regulator.  |   |
| ST66             |         | Compliance summary                      | Details of penalty or litigation   |         |            | Provide brief details of penalties and litigation.  |   |
| ST89             |         | Compliance summary                      | Pollution Incident Response Management Plan?   |         | Y/N        | Is a Pollution Incident Response Management Plan (PIRMP) currently in place for this sewage treatment works?  |   |
| ST63             |         | Sampling days                           | Number of scheduled sampling days  |         | days       | The scheduled sampling days are those specified in the treatment work's licence.  |   |
| ST49             |         | Biochemical oxygen demand               | 90th percentile limit  |         | mg/L       | The limit shown is reproduced from this plant's EPA licence. 100 percentile limits are shown where 90th percentiles are not specified. Absence of a value indicates that no limit is specified.   |   |
| ST50             |         | Biochemical oxygen demand               | Percent compliance   |         | %          | Where the licence specifies a 90th percentile limit and the number of complying samples divided by the total number of scheduled samples is greater than 90%, compliance is deemed to be  |   |
| ST51             |         | Total suspended solids                  | 90th percentile limit  |         | mg/L       | The limit shown is reproduced from this plant's EPA licence. 100 percentile limits are shown where 90th percentiles are not specified. Absence of a value indicates that no limit is specified.   |   |
| ST52             |         | Total suspended solids                  | Percent compliance   |         | %          | Where the licence specifies a 90th percentile limit and the number of complying samples divided by the total number of scheduled samples is greater than 90%, compliance is deemed to be  |   |
| ST53             |         | Nitrogen (total)                        | 90th percentile limit  |         | mg/L       | The limit shown is reproduced from this plant's EPA licence. 100 percentile limits are shown where 90th percentiles are not specified. Absence of a value indicates that no limit is specified.   |   |
| ST54             |         | Nitrogen (total)                        | Percent compliance   |         | %          | Where the licence specifies a 90th percentile limit and the number of complying samples divided by the total number of scheduled samples is greater than 90%, compliance is deemed to be  |   |
| ST55             |         | Ammonia                                 | 90th percentile limit  |         | mg/L       | The limit shown is reproduced from this plant's EPA licence. 100 percentile limits are shown where 90th percentiles are not specified. Many licences specify that where a limit is not specified, no concentration of the pollutant is authorised to be released. |   |
| ST56             |         | Ammonia                                 | Percent compliance   |         | %          | Where the licence specifies a 90th percentile limit and the number of complying samples divided by the total number of scheduled samples is greater than 90%, compliance is deemed to be  |   |
| ST59             |         | Phosphorus (total)                      | 90th percentile limit  |         | mg/L       | The limit shown is reproduced from this plant's EPA licence. 100 percentile limits are shown where 90th percentiles are not specified. Absence of a value indicates that no limit is specified.   |   |
| ST60             |         | Phosphorus (total)                      | Percent compliance   |         | %          | Where the licence specifies a 90th percentile limit and the number of complying samples divided by the total number of scheduled samples is greater than 90%, compliance is deemed to be  |   |
| ST57             |         | Oil and grease                          | 90th percentile limit  |         | mg/L       | The limit shown is reproduced from this plant's EPA licence. 100 percentile limits are shown where 90th percentiles are not specified. Absence of a value indicates that no limit is specified.   |   |
| ST58             |         | Oil and grease                          | Percent compliance   |         | %          | Where the licence specifies a 90th percentile limit and the number of complying samples divided by the total number of scheduled samples is greater than 90%, compliance is deemed to be  |   |
| ST61             |         | Faecal coliforms                        | 90th percentile limit  |         | cfu/100 mL | The limit shown is reproduced from this plant's EPA licence. 100 percentile limits are shown where 90th percentiles are not specified. Absence of a value indicates that no limit is specified.   |   |
| ST62             |         | Faecal coliforms                        | Percent compliance   |         | %          | Where the licence specifies a 90th percentile limit and the number of complying samples divided by the total number of scheduled samples is greater than 90%, compliance is deemed to be  |   |

| ST33a      | W18.2   | Volumes collected by this works             | Sewage received from other utilities |         | ML   | Bulk volume of sewage received from other utilities outside your utility's geographic area of responsibility.  |   |
| ST33b      | W18.3   | Volumes collected by this works             | Sewage collected from sewer mining   |         | ML   | Volumes collected from sewer mining within your utility's geographic area of responsibility.   |   |
| ST12       | [W16]   | Volumes collected by this works             | Tankered septic tank effluent        |         | kL   | Enter volume in kilolitres not Megalitres.   |   |
| ST13       | [W16]   | Volumes collected by this works             | Tankered septic sludge - pan         |         | kL   | Enter volume in kilolitres not Megalitres.   |   |
| ST34       | W17     | Volumes collected by this works             | Network trade waste                  |         | ML   | Estimated non-metered and metered network trade waste.   |   |
| ST14       | [W16]   | Volumes collected by this works             | Tankered grease trap waste           |         | kL   | Enter volume in kilolitres not Megalitres.   |   |
| ST15       | W18     | Volumes collected by this works             | Total sewage collected               |         | ML   | Sum of all volumes collected: (ST31) + (ST32) + (ST33) + (ST34) + (ST12) + (ST13) + (ST14).  |   |
| ST16       |         | Volumes treated by this works               | No treatment                         |         | ML   |  |   |
| ST17       | E1      | Volumes treated by this works               | Primary treatment only               |         | ML   | Include only volume treated to remove suspended solids (primary standard). Exclude volumes treated to secondary or tertiary standard.  | Primary treatment may include screening, clarification and grease removal.  |
| ST18       | E2      | Volumes treated by this works               | Secondary treatment only             |         | ML   | Include only volume treated to primary standard with further polishing of effluent to reduce at least 85% of biochemical oxygen demand and suspended solids (secondary standard). Exclude volume treated to primary standard only or tertiary standard.  | Secondary treatment may include a polishing step, activated sludge, anaerobic/aerobic processes, biological/sand filtration and lagoon sedimentation.   |
| ST19       | E3      | Volumes treated by this works               | Tertiary treatment only              |         | ML   | Include only volume treated to secondary standard with further disinfection of effluent and filtering to remove nutrients and nitrogen using artificial wetland, ponds, chlorination, ozonation or UV treatment (tertiary standard). Exclude volume treated to primary or secondary standard only. | Tertiary treatment may include biological/chemical dosing nutrient removal, reverse osmosis, advanced filtration systems, membrane bioreactors and secondary treatment with wetland nutrient removal. |
| ST80       | [W20]   | Volumes recycled and supplied by this works | Residential                          |         | ML   | Recycled water for potable and non-potable town water supply reticulated to residential customers. Excludes urban stormwater use.  | Include metered and estimated unmetered recycled water supplied.  |
| ST81       | [W21]   | Volumes recycled and supplied by this works | Commercial, Industrial, Municipal    |         | ML   | Recycled water supplied to commercial, industrial, municipal properties. Includes golf courses. Excludes urban stormwater use.   |   |
| ST82       | [W22]   | Volumes recycled and supplied by this works | Agricultural                         |         | ML   | Recycled water supplied for agricultural purposes. Includes irrigation, forestry and livestock. Excludes urban stormwater use.   |   |
| ST83       | [W23]   | Volumes recycled and supplied by this works | Environmental                        |         | ML   | Recycled water supplied for environmental purposes as prescribed by the environmental regulator. Includes discharge to rivers, sea or natural wetlands, provided there is a beneficial use rather than disposal.   |   |
| ST84       | [W24]   | Volumes recycled and supplied by this works | On-site                              |         | ML   | Recycled water used on-site external to the treatment process.   |   |
| ST85       | [W25]   | Volumes recycled and supplied by this works | Other                                |         | ML   | Recycled water supplied to other users including managed aquifer recharge, firefighting, mains flushing, losses and leakage.   |   |
| ST86       | [W25.1] | Volumes recycled and supplied by this works | Managed aquifer recharge             |         | ML   | Recycled water supplied for managed aquifer recharge, excluding environmental water and urban stormwater use.  |   |
| ST87       | [W15]   | Volumes recycled and supplied by this works | Bulk recycled water exports          |         | ML   | Recycled water supplied to other utilities or entities outside your utility's geographic area of responsibility. Excludes urban stormwater.  |   |

Sewerage treatment data

| NSW No. | NWI No. | Indicator Group                             | Reported Indicator                              | 2014/15 | Unit   | Indicator Definition   | Instruction |

| ST41    |         | Volumes disposed by this works              | Volume disposed to river - creek                |         | ML     | Include effluent disposed to wetlands connected to a river or creek. Exclude disposal within estuaries. Exclude volumes recycled for environmental purposes.   |             |
| ST42    |         | Volumes disposed by this works              | Volume disposed to land                         |         | ML     | Include effluent disposed to evaporation basins, dunes and exfiltration beds. Exclude recycled water (ie. reuse farms etc).  |             |
| ST70    | W18.1   | Volume exported by this works               | Sewage supplied to other utilities              |         | ML     | Bulk volume of sewage supplied to other utilities outside your utility's geographic area of responsibility.  |             |
| ST43    |         | Flow data                                   | Average dry weather flow - permanent population |         | L/s    | Summed values of dry weather flows outside peak population periods divided by number of these records.   |             |
| ST44    |         | Flow data                                   | Average dry weather flow - peak population      |         | L/s    | Summed values of dry weather flows during peak population periods divided by number of these records.  |             |
| ST45    |         | Flow data                                   | Peak dry weather flow - permanent population    |         | L/s    | Maximum flow rate recorded during dry weather outside peak population periods.   |             |
| ST46    |         | Flow data                                   | Peak dry weather flow - peak population         |         | L/s    | Maximum flow rate recorded during dry weather during peak population periods.  |             |
| ST48    |         | Flow data                                   | Peak 1 hour wet weather flow                    |         | L/s    | Maximum volume recorded in any 1 hour period following a wet weather event during the reporting year.  |             |
| ST47    |         | Flow data                                   | Peak 24 hr wet weather volume                   |         | ML     | Maximum volume recorded in any 24 hour period following a wet weather event during the reporting year.   |             |
| ST26    | [E8]    | Biosolids produced by this works            | Mass extracted                                  |         | tonnes | Include stabilised organic solids extracted from effluent. Exclude screened inorganic material.  |             |
| ST27    | E8      | Biosolids produced by this works            | Percentage of mass reused                       |         | %      | Include application as a soil conditioner on land used for agriculture or forestry, rehabilitation of mine and industrial sites and general landscaping. Include use in manufacturing other products. Include energy generation. Exclude landfill. |             |
| ST29    |         | Biosolids produced by this works            | Percent of total disposed to landfill           |         | %      | Include injection below ground level, burial and disposal to tip or treatment works site.  |             |
| ST30    |         | Biosolids produced by this works            | Percent to other                                |         | %      | Include incineration.  |             |

## Australian Drinking Water Guidelines 2011 and NSW Health Drinking Water Monitoring Program – Sampling location and frequency

### Guidelines

The Australian Drinking Water Guidelines 2011 (NHMRC/NRMMC) supersede the 2004 Guidelines. The 2011 Guidelines continue to emphasise the need to implement a framework for good management of drinking water supplies in order to assure safety at point of use.

NSW local water utilities (LWUs) are required to adopt a 'best practice' approach for the supply of drinking water using the Framework for Management of Drinking Water Quality (*Public Health Act 2010*). LWUs need to prepare and implement a risk based drinking water management system by 1 September 2014 in accordance with the NSW guidelines for drinking water management systems, NSW Health and NSW Office of Water, 2013. Refer also to pages 9 and 10 of the *2014-15 NSW Water Supply and Sewerage Benchmarking Report*. The management systems must include verification monitoring of drinking water quality. The measurable characteristics fall into the following categories:

- Microbiological
- Physical
- Chemical
- Radiological.

For each characteristic, the Guidelines identify three parameters, namely location of sampling, frequency of sampling and acceptable performance measures. Compliance requires that all three parameters be satisfied. NSW Health advises each LWU of the recommended minimum number of samples to be tested annually. See the *NSW Health Drinking Water Monitoring Program* booklet for more information.

Table 1 indicates the number of microbiological samples recommended annually for systems supplying populations of varying sizes. See note to Table 1.

### Sampling location

Samples for verification monitoring should be taken at representative locations throughout the drinking water distribution system. Suggested locations for each characteristic are shown on pages 9-19 (page numbers refer to the 2011 Guidelines). NSW Health recommends that drinking water quality monitoring rotate amongst designated sample sites throughout the distribution system. Sample sites should give good geographical representation of

the water supply system and enable the comparison of water quality over time for particular sections of the system. For more information refer to the NSW Health Drinking Water Monitoring Program

(<http://www.health.nsw.gov.au/environment/water/Pages/drinkwater-nsw.aspx>).

### Sampling frequency

The frequency of sampling is dependent on the type of characteristic. The suggested sampling frequency for various drinking water characteristics are shown on pages 9-20 to 9-21.

The sampling frequency required for microbiological quality is provided in Table 9.4 on page 9-20 and summarised in Table 1 below. The frequency should be increased following repair work, interruptions to supply, at times of flooding or during/after emergency operations. With small water supply systems, periodic sanitary surveys are likely to yield more information than infrequent sampling.

**Table 1 - Microbiological sampling frequency**

| <b>Discrete systems</b><br>(supplying a single town and surrounds)  |   |
|---|---|
| <b>Town population</b>  | <b>Recommended minimum number of samples<sup>+</sup></b>  |
| <100  | 12 samples per year (1 per month)   |
| <500  | 26 samples per year (1 per fortnight)   |
| 500 - 5,000   | 52 samples per year (1 per week)  |
| 5,000 - 100,000   | 52 samples per year (1 per week), plus one additional sample per month for each 5,000 above 5,000 |
| >100,000  | 6 samples per week, plus one additional sample per month for each 10,000 above 100,000            |
| + Note: The above indicates that for a system supplying a population of under 100, under 500, 5,000, 50,000, 100,000 and 150,000, the recommended minimum number of samples per year are 12, 26, 52, 160, 280 and 380 respectively. |   |
| <b>Complex systems</b><br>(supplying more than one town and surrounds)  |   |
| Note: the sample numbers apply to each town or zone within the system and the total number of samples must be not less than 52  |   |
| <1,000  | 12 samples per year (1 per month)   |
| 1,000 - 5,000   | 26 samples per year (1 per fortnight)   |
| 5,000 - 100,000   | 52 samples per year (1 per week), plus one additional sample per month for each 5,000 above 5,000 |

The sampling frequency required for physical, chemical and radiological quality is provided in *NSW Health Drinking Water Monitoring Program* and Table 9.5 on page 9-21 and summarised in Tables 2 and 3 below.

Sampling for the key physical characteristics should be carried out as shown in Table 5 where these are significant.

**Table 2 - Physical quality sampling frequency+**

| Characteristic   | Sampling frequency  |
|--|---|
| pH, Turbidity, Colour, total dissolved solids (or conductivity)  | Weekly at water treatment works or chlorinator. Monthly sample to lab in systems serving a population of 5,000 or more, otherwise biannually. |
| Hardness   | Monthly or more frequent at treatment works (or lab) if treating for hardness. Otherwise as above.  |
| + All of these are aesthetic (non-health related). However, turbidity >1 may reduce the effectiveness of disinfection. |   |

NSW Health recommends monthly physical/chemical sampling for systems serving a population of 5,000 or more, otherwise biannually. NSW Health recommends a minimum set of characteristics to be tested (see Table 3). In addition, tests for key characteristics of a particular water supply should be undertaken more frequently as shown in Table 3 where these are significant.

**Table 3 - Chemical quality sampling frequency#**

| Characteristic   | Sampling frequency  |
|--|---|
| Fluoride   | Daily at treatment works and monthly sample to lab if the water supply is fluoridated |
| Antimony, arsenic, cadmium, chromium, copper, fluoride, iodine, iron, lead, manganese, mercury, nickel, nitrate, nitrite, sulfate  | Monthly in systems serving a population of 5,000 or more, otherwise biannually.       |
| # NSW Health may agree to vary this list where indicated by a risk assessment. NSW Health Forensic and Analytical Science service test for a wider range of characteristics than listed above. |   |

The need for radiological (Radionuclides) sampling should be assessed annually. New supplies should be assessed quarterly for one year, then every 2 years (groundwater) or 5 years (surface water).

Increase frequency to quarterly if guideline screening levels are exceeded (page 9-21).

Water utilities should assess risks and, if necessary, monitor to satisfy themselves of the safety of their supply with respect to pesticides, disinfection by-products and other organic chemicals. Pesticide and organic toxicants – monthly or quarterly sampling if previously (or potentially) detected; seasonally annually, or event-related (e.g. storm events, spills) for other pesticides/organic toxicants.

In order to satisfy the guidelines it may be necessary to carry out more frequent monitoring for some characteristics. Each water utility should carry out a detailed assessment of its water supply system when planning a monitoring program.

## Performance

Performance measure for *Escherichia coli* within the distribution system is summarised in Table 4.

**Table 4 - Microbiological performance**

| Indicator  | Guideline value  |
|--|--|
| E. coli  | Should not be detected in a minimum 100mL sample of drinking water.<br>If detected, immediate corrective action must be taken <sup>1</sup> . |
| 1 Such action is needed to determine whether there is a real problem with drinking water quality in accordance with the NSW Health Protocol: ( <a href="http://www.health.nsw.gov.au/environment/water/Pages/nswhrp-microbiological.aspx">http://www.health.nsw.gov.au/environment/water/Pages/nswhrp-microbiological.aspx</a> ) |  |

Microbiological compliance is achieved if the required number of samples has been tested and at least 98% of the samples had no *E. coli*. This value (98%) has been determined by NSW Health in accordance with section 10.3.1 on page 10-11 of 2011 ADWG and is the same value as applied for the 2004 ADWG.

Tables 10.4 and 10.5 on pages 10-19 to 10-32 of the guidelines summarise the guideline values for microbial, chemical and physical characteristics, to provide a ready reference when monitoring results are being evaluated. More detailed information on each characteristic can be found in the relevant fact sheet in the guidelines.

## Examples of environmental and public health incidents

### Water supply

**Environmental incidents** (NSW Indicators WB137 to WB140 on page 222)

Category 1 – Minor incidents with inconsequential effects

- A reportable incident but not a breach of environmental regulations.
- An incident resulting in under four days of odour or noise complaints.
- A minor spillage of non-toxic chemicals or sludge to waterway or land.

Category 2 – Incident with limited environmental effects

- A minor breach of environmental regulations, e.g. non maintenance of the required environmental flows.
- An incident resulting in over four days of odour or noise complaints.
- A major soil erosion incident requiring remediation.
- A significant chemical or sludge spill to waterway or land.

Category 3 – Severe incident with irreversible environmental effects

- A major breach of environmental regulations.
- A dam failure.
- A severe algal outbreak in storages/waterways.
- A major toxic chemical or sludge spill into waterways.
- Widespread destruction of native forests/ecosystems.

**Public health incidents** (NSW Indicators WB115 to WB118 on page 221)

Category 1 – Minor incidents with inconsequential effects

- A minor failure of water treatment processes.
- An incident resulting in a limited boil water notice.

Category 2 – Incidents with limited health effects

- Non-compliance with health parameters (E. coli) of 2011 NHMRC/NRMMC Australian Drinking Water Guidelines (ADWG) for over seven days.
- A system-wide boil water notice.
- A failure of a disinfection system for over three days.
- A failure of major treatment processes at a treatment works for over four days.
- A chlorine or ammonia gas leak (chlorination/chloramination).
- Non-pathogenic/toxic contamination of the potable water supply due to a cross connection.
- An incident resulting in unplanned interruptions to supply for > 2 days (if > 7 days report as Category 3).

Category 3 – Incidents with major health effects

- An outbreak of water borne disease due to water supply system.
- Hospitalisations from water borne disease due to water supply.
- An incident resulting in unplanned interruptions to supply for over seven days.
- A pathogenic contamination of the potable water supply due to a cross connection.
- A toxic contamination of water supply.

#### Notes:

(16) Environmental regulations include any licence conditions.

(17) An incident with both environmental and public health impacts should be reported in both categories.

### Sewerage

**Environmental incidents** (NSW Indicators SB69 to SB72 on page 230)

- Category 1 – Minor Incidents with Inconsequential Effects

- A reportable incident but not a breach of environmental regulations
- An incident resulting in under 4 days of odour or noise complaints
- A minor spillage of non-toxic chemicals or sludge to waterway or land

#### Category 2 – Incident with limited environmental effects

- A minor breach of environmental regulations, e.g.:
  - discharge of partially treated effluent to receiving waters
  - embankment failure of an effluent pond.
- A wet weather sewer overflow for under three hours.
- An incident resulting in over four days of odour or noise complaints.
- A major soil erosion incident requiring remediation.
- A significant chemical or sludge spill to waterways or land.

#### Category 3 – Severe incident with irreversible environmental effects

- A dry weather sewer overflow
- A major breach of environmental regulations, e.g.:
  - a major wet weather sewer overflow or an overflow for over three hours
  - a failure of STW, resulting in discharge of large volume of untreated sewage to environment
  - a major toxic chemical or sludge spill into waterways
  - widespread destruction of native forests/ecosystems
  - embankment failure of a sludge lagoon.

### Public health incidents (NSW Indicators SB44 to SB47 on page 229)

#### Category 1 – Minor Incidents with Inconsequential Effects

- A minor failure of sewage treatment processes.

#### Category 2 – Incidents with limited health effects

- An algal outbreak in receiving waters attributable to sewerage system.
- Issue of public no-contact notice with receiving waters.
- Sewer overflow affecting public access to land or water.
- Sewage contamination of fishing or recreational water areas.
- A failure of effluent disinfection system.
- A failure of major treatment processes at a treatment works for over four days.
- An incident resulting in unplanned interruptions to service for over three days (if over 20 days, report as Category 3).
- A chlorine leak.

#### Category 3 – Incidents with major health effects

- An outbreak of water borne disease due to sewerage system.
- Hospitalisations from water borne disease due to sewerage system.
- Contamination of an oyster farming area due to sewerage system.
- A sewer overflow into a water supply catchment.
- An incident resulting in unplanned interruptions to service for over 20 days.

| 35. Other assets   |         |             |       |
| 36. <b>Total assets</b>                                    |         |             |       |
| <b>Liabilities</b>   |         |             |       |
| 37. Bank overdraft   |         |             |       |
| 38. Creditors  |         |             |       |
| 39. Borrowings   |         |             |       |
| a. Loans   |         |             |       |
| b. Advances  |         |             |       |
| c. Finance leases  |         |             |       |
| 40. Provisions   |         |             |       |
| a. Tax equivalents   |         |             |       |
| b. Dividend  |         |             |       |
| c. Other   |         |             |       |
| 41. <b>Total liabilities</b>                               |         |             |       |
| 42. <b>Net assets committed</b>                            |         |             |       |
| <b>Equity</b>  |         |             |       |
| 43. Accumulated surplus                                    |         |             |       |
| 44. Asset revaluation reserve                              |         |             |       |
| 45. <b>Total equity</b>                                    |         |             |       |
| <b>Note to system assets:</b>                              |         |             |       |
| 46. Current replacement cost of system assets              |         |             |       |
| 47. Accumulated current cost depreciation of system assets |         |             |       |
| 48. Written down current cost of system assets             |         |             |       |

## Notes to Special Schedules 3 and 5

**Administration<sup>(1)</sup>** (item 1a of Special Schedules 3 and 5) comprises the following:

- Administration staff:
  - Salaries and allowance
  - Travelling expenses
  - Accrual of leave entitlements
  - Employment overheads.
- Meter reading.
- Bad and doubtful debts.
- Other administrative/corporate support services.

**Engineering and supervision<sup>(1)</sup>** (item 1b of Special Schedules 3 and 5) comprises the following:

- Engineering staff:
  - Salaries and allowance
  - Travelling expenses
  - Accrual of leave entitlements
  - Employment overheads.
- Other technical and supervision staff:
  - Salaries and allowance
  - Travelling expenses
  - Accrual of leave entitlements
  - Employment overheads.

**Operation expenses** (item 2 of Special Schedules 3 and 5) comprise the day to day operational expenses excluding maintenance expenses.

**Maintenance expenses** (item 2 of Special Schedules 3 and 5) comprise the day to day repair and maintenance expenses. (Refer to Section 5 of the Local Government Asset Accounting Manual regarding capitalisation principles and the distinction between capital and maintenance expenditure).

**Other expenses** (item 4c of Special Schedules 3 and 5) include all expenses not recorded elsewhere.

**Impairment losses** (items 4d and 4e of Special Schedules 3 and 5) are to be used when the carrying amount of an asset exceeds its recoverable amount (refer to page D-31).

**Aboriginal Communities Water and Sewerage Program** (item 4f of Special Schedules 3 and 5) is to be used when operation and maintenance work has been undertaken on behalf of the Aboriginal Communities Water and Sewerage Program. Similarly, income for item 11a of Special Schedule 3 and item 12a of Special Schedule 5 are for services provided to the Aboriginal Communities Water and Sewerage Program and is not part of Council's water supply and sewerage revenue.

**Revaluation decrements** (item 4b of Special Schedules 3 and 5) is to be used when infrastructure assets have decreased in fair value.

**Residential charges<sup>(2)</sup>** (items 6a, 6b and item 6 of Special Schedules 3 and 5 respectively) include all income from residential charges. Item 6 of Schedule 3 should be separated into 6a Access Charges (including rates if applicable) and 6b User Charges. Exclude non-residential charges.

**Non-residential charges<sup>(2)</sup>** (items 7a, 7b of Special Schedules 3 and 5) include all income from non-residential charges separated into 7a Access Charges (including rates if applicable) and 7b User Charges. Exclude residential charges.

**Trade waste charges** (item 8 of Special Schedule 5) include all income from trade waste charges separated into 8a Annual Fees, 8b Usage Charges, 8c Excess Mass Charges and 8d Re-inspection Fees.

**Other income** (items 10 and 11 of Special Schedules 3 and 5 respectively) include all income not recorded elsewhere.

**Other contributions** (items 12c and 13c of Special Schedules 3 and 5 respectively) include capital contributions for water supply or sewerage services received by Council under Section 565 of the Local Government Act.

### Notes:

- (1) Administration and engineering costs for the development of capital works projects should be reported as part of the capital cost of the project and not as part of the recurrent expenditure (ie. in item 16 for water supply and item 17 for sewerage, and **not** in items 1a and 1b).
- (2) To enable accurate reporting of **residential revenue from usage charges**, it is essential for councils to accurately separate their residential (item 6) and non-residential (item 7) charges.

## NSW Council Special Schedule No. 7: Report on Infrastructure Assets as at 30 June 2015

| Asset class          | Asset category                          | Estimated cost to bring to a satisfactory standard<br>\$'000 | Required annual maintenance<br>\$'000 | 2014/15 Actual maintenance<br>\$'000 | Written Down Value (WDV) | Assets in Condition as a % of WDV* |   |   |   |   |

### Infrastructure Asset Condition Assessment

| Level | Condition | Description                           |
|-------|-----------|---------------------------------------|
| 1     | Excellent | No work required (normal maintenance) |
| 2     | Good      | Only minor maintenance work required  |
| 3     | Average   | Maintenance work required             |
| 4     | Poor      | Renewal required                      |
| 5     | Very Poor | Urgent renewal/upgrading required     |

## NSW Council

## Commentary – Report on Infrastructure Assets

The Report on Infrastructure Assets provides information on a council's assets in addition to that contained in Note 9 Infrastructure, Property, Plant and Equipment. The nature of the information in the Report on Infrastructure Assets is related to the condition, maintenance and renewal of infrastructure assets.

### Asset Condition

Asset condition assessment is the process of continuous or periodic inspection, assessment, measurement and interpretation of the data to indicate the condition of a specific asset so as to determine the need for some preventative or remedial action.

Councils are strongly encouraged to use the asset condition rankings as set out in the Asset Condition Assessment table in the Integrated Planning and Reporting Manual for local government in NSW. Asset conditions are assessed using a scale of one to five. Assets in condition one are considered to be excellent and that there is no work required (other than normal maintenance) while assets in condition five are considered to be very poor with urgent renewal or upgrading being required. Asset condition should be based on up to date asset condition assessments rather than an engineering estimates.

**WDV** is the written down value of the assets. The WDV \$ column which the condition assessments are to be made against is mandatory & cannot be changed to any other "base" figure. Should a Council want to publish condition assessments against "GBV \$" then they should publish a second SS7 within the Special Schedules.

**Estimated cost to bring to a satisfactory standard (BTS).** Satisfactory is defined as "*satisfying expectations or needs, leaving no room for complaint, causing satisfaction, adequate*"<sup>1</sup>. The estimated cost to bring assets to a satisfactory standard is the amount of money that is required to be spent on an asset to ensure that it is in a satisfactory standard. This should not include any planned enhancements.

Unless Council has undertaken consultation with their community and has agreed to a level of service from councils assets the BTS should be measured against the second condition rating of Good as stated in the Integrated Planning and Reporting Manual for local government in NSW.

**Renewal** is defined by the IIMM as "works to upgrade, refurbish or replace existing facilities with facilities of equivalent capacity or performance capability".

**Enhancement** means to "heighten, intensify or improve the facilities".

**Required annual maintenance** is "what should be spent to maintain assets in a satisfactory standard".

### Actual maintenance

Actual maintenance, previously referred to as current annual maintenance is what has been spent in the current year to maintain the assets (This figure should be sourced from Note 4). This may be higher or lower than the required annual maintenance due to the timing of when the maintenance actually occurs.

For further information, councils should consult the Integrated Planning and Reporting Guidelines and Manual for local government in NSW located on the Office of Local Government's website ([www.olg.nsw.gov.au](http://www.olg.nsw.gov.au)).

### Asset Classes

It should be noted that within the Buildings asset class 'Other Buildings' Category may include assets such as childcare centres, aged care facilities and multi-purpose centres for example. Cultural Facilities may include assets such as museums, art galleries and entertainment centres. 'Other Structures' is designed for the following types of infrastructure assets: statues, fences, monuments, clock towers and so on. 'Open Space/Recreational Assets' may include assets such as swimming pools (but not including buildings, plant & equipment, car parks etc. that are associated with the swimming pool), playground equipment, BBQ's and outdoor fitness facilities. 'Other infrastructure' may include jetties, boat ramps, sea/rock/retaining walls etc. The Asset Classes & Asset Categories as listed in SS7 are MANDATORY. If Councils want to add more line items to SS7, then they must be sub-categories (or individual assets) of the listed Asset Categories.

### Infrastructure Asset Performance Indicators.

The Office of Local Government requires a minimum number of prescribed indicators in relation to infrastructure asset management, to be presented as follows:

#### 1. Building and infrastructure renewal ratio

Purpose:- To assess the rate at which these assets are being renewed against the rate at which they are depreciating. The benchmark is greater than 100%.

Asset renewals (building, infrastructure and other structures)

Depreciation, amortisation and impairment (building, infrastructure and other structures)

(Expressed as a ratio)

#### 2. Infrastructure backlog ratio

Purpose:- This ratio shows what proportion the backlog is against the total value of a Council's infrastructure. The benchmark is less than 2%.

Estimated cost to bring assets to a satisfactory condition

Total value\* of infrastructure, building, other structures and depreciable land improvement assets

### 3. Asset maintenance ratio

Purpose:- This ratio compares actual versus required annual asset maintenance. A ratio of above 1.0 indicates that the Council is investing enough funds within the year to stop the Infrastructure Backlog from growing. The benchmark is greater than 1.0.

Actual asset maintenance

Required asset maintenance

### 4. Capital expenditure ratio

Purpose:- This indicates the extent to which a Council is forecasting to expand its asset base with capital expenditure spent on both new assets, and replacement and renewal of existing assets. The benchmark is greater than 1.1. The calculation is based on Note 9 and the balance sheet i.e. building, infrastructure and other structures additions less WDV of disposals over annual depreciation.

Annual capital expenditure

Annual depreciation

## Infrastructure Asset Performance Indicators by Fund

General Fund refers to all Council activities except Water and Sewer. Where Councils do not have Water and Sewer Funds this is not required.

## Auditing Infrastructure Asset Information

The Local Government Infrastructure Audit undertaken by the Office of Local Government recommended that:

- *“clearly defined and specific asset management measurement parameters to be developed with the local government sector”* and for
- *“aspects of asset management to be subjected to an audit. Audit parameters to be developed to ensure a level of assurance that asset management information is reliable”*

A commitment was made during the release of the Local Government Code of Accounting Practice and Financial Reporting Code update 22 that the infrastructure asset information of councils would be audited in 2015.

A three stage approach has been developed to meet the requirement of auditing infrastructure asset information. The approach has been developed taking into account the requirements of councils in the Fit for the Future program, the need for a review of Special Schedule 7 to occur and the importance of infrastructure assets in the delivery of services and making sure the auditing process is appropriate.

### Stage one

Local Government auditors will be required to check the systems and processes councils have in place for capturing, recording and reporting councils' asset information. The purpose of this is to test how prepared councils are for an audit.

The Office of Local Government will issue a circular to all councils and auditors with the format and a list of questions that should be used to inform the auditor, council and the OLG of how well prepared councils are for an audit. The councils will also be able to use this document to assess if there are any areas that need improving. Stage one will be conducted during the audit of the 2014/15 financial reports, that is, July to October 2015.

### Stage two

This stage involves reviewing the Report on Infrastructure Assets (SS7) and also the information contained within the Integrated Planning and Reporting Manual and Guidelines.

It has been recognised by the industry and the Office that more information needs to be available to councils related to SS7, together with a more consistent approach to calculating the cost to bring assets to a satisfactory standard. The plan for this stage is to prepare an updated SS7 and to release it to the industry for comment in the second half of 2015.

A review of the IP&R asset management information should also take place at the same time to ensure there is consistency between the two.

### Stage three

Stage three involves auditing the information contained within SS7. The OLG will work with the NSW Audit Office and the LG Auditor's Association of NSW to develop an audit framework.

The audit will be conducted on the information reported as at 30 June 2016.

**Note 2 Water Supply Business best practice management disclosure requirements****2015****1. Calculation and Payment of Tax-Equivalents**

|       |  |    |  |
|-------|--|----|--|
| (i)   | Calculated Tax Equivalents                                   | \$ |  |
| (ii)  | No of assessments multiplied by \$3/assessment               | \$ |  |
| (iii) | Amounts payable for Tax Equivalents (lesser of (i) and (ii)) | \$ |  |
| (iv)  | Tax Equivalents paid   | \$ |  |

**2. Dividend from Surplus**

|       |   |    |  |
|-------|---|----|--|
| (i)   | 50% of Surplus before Dividends<br>(Calculated in accordance with Best Practice Management for Water Supply and Sewerage guidelines.) | \$ |  |
| (ii)  | No of assessments multiplied by \$30/assessment, less tax equivalent charges/assessment   | \$ |  |
| (iii) | Cumulative Surplus before Dividends for 3 years to 30 June 2015, less cumulative dividends paid for 2 years to 30 June 2014           | \$ |  |
| (iv)  | Maximum Dividend from Surplus (least of (i), (ii) and (iii))  | \$ |  |
| (v)   | Dividend paid from Surplus  | \$ |  |

**3. Required Outcomes for 6 Criteria**

|       |   |        |  |
|-------|---|--------|--|
| (i)   | Complete current Strategic Business Plan (including Financial Plan)   | Yes/No |  |
| (ii)  | Full cost-recovery, without significant cross subsidies<br>(Item 2(a) in Table 1 on page 22 of Best Practice Management Guidelines) | Yes/No |  |
|       | Complying charges (Item 2(b) in Table 1)  | Yes/No |  |
|       | DSP with Commercial Developer Charges (Item 2(e) in Table 1)  | Yes/No |  |
|       | If Dual Water Supplies, Complying Charges (Item 2(g) in Table 1)  | Yes/No |  |
| (iii) | Sound Water Conservation & Demand Management implemented  | Yes/No |  |
| (iv)  | Sound Drought Management implemented  | Yes/No |  |
| (v)   | Complete Performance Reporting (by 15 September each year)  | Yes/No |  |
| (vi)  | a. Complete Integrated Water Cycle Management Evaluation  | Yes/No |  |
|       | b. Complete and implement Integrated Water Cycle Management Strategy  | Yes/No |  |

- Notes:
- References to s (eg s12) refer to item numbers in Special Schedules Nos. 5 and 6 of each Council's Annual Financial Statements.
  - The NWI performance indicators are based on the National Performance Framework handbook for Urban Performance Reporting Indicators and Definitions.  
The NWI indicators are to be calculated using the formulae shown above.

Formulae for calculation of performance indicators in tables 5 to 18

Formulae for calculation of performance indicators in table 5

| 5. 2014/15 NSW Water Utility Performance Summary |  |  |   |
|--|--|--|---|
| Column No.                                       | Performance Indicator  | Background to Formula  | Formula   |
| (1)  | Water Supply Connected Properties (No.)  | Total number of water supply connected properties (Residential plus Non-residential).  | From Col (20) Table 9                                 |
| (2)  | Total Urban Water Supplied (ML)  | Total annual water supplied (Potable plus Non-potable plus recycled. Excludes bulk water supplied). Where a Local Water Utility (LWU) has not reported the total water supplied, the previous year's value has been used and is shown in italics bold. | From Col (49) Table 10                                |
| (3)  | Residential Revenue from Usage Charges - Water Supply (% of residential bills) | Revenue from residential usage charges divided by total residential revenue (residential usage plus access charges including any rates).   | $W\_6b \times 100 \div [W\_6a + W\_6b]$               |
| (4)  | Typical Residential Bill - Water Supply (\$/assessment) (see note B)           | Calculated using the average residential water supplied for 2014/15 multiplied by the usage charges for 2014/15 plus the access charge for 2014/15.  | $Col (5) \times Col (14a) \div 100 + Col (2) Table 6$ |
| (5)  | Typical Residential Bill - Sewerage (\$/assessment) (see note B)               | Calculated using the access charge for 2014/15 plus, if council has residential sewer usage charges, the average residential water consumption for 2014/15 multiplied by the usage charges and usage factor for 2014/15.                               | $Col (1) + Col (1a) Table 7$                          |
| (6)  | Typical Residential Bill - Water Supply & Sewerage (\$/assessment)             | Sum of water supply and sewerage Typical Residential Bills.  | $Col (4) Table 5 + Col (5) Table 5$                   |
| (7)  | Typical Developer Charge - Water Supply & Sewerage (\$/ET)                     | Sum of water and sewerage Typical Developer Charges.   | $Col (7) Table 6 + Col (7) Table 7$                   |
| (8)  | Current Replacement Cost per Assessment - W&S (\$/assessment)                  | The value of the infrastructure assets divided by the number of assessments.   | $Col (62) Table 11 + Col (47) Table 16$               |
| (9)  | E. coli Compliance Achieved?   | E. coli water quality compliance (ADWG 2011) achieved - Yes or % if No. Number of samples tested that meet the water quality requirements divided by the total number of samples tested.   | From Col (71) Table 12                                |
| (10)   | % Population with E. coli Compliance   | From population served and compliance achieved by each zone.   | From Col (71c) Table 12                               |
| (11)   | Chemical Compliance Achieved?  | Chemical water quality compliance (ADWG 2011) achieved - Yes or % if No.   | From Col (70) Table 12                                |
| (12)   | % of Population with Chemical Compliance                                       | From population served and compliance achieved by each zone.   | From Col (70c) Table 12                               |
| (13)   | Water Quality Complaints (per 1000 properties)                                 | Complaints are any expression of customer dissatisfaction reported in person, by phone, fax, letter or email. Water quality complaints are reported under the relevant source water treatment works.   | From Col (73) Table 12                                |
| (14)   | Average Duration of an Unplanned Interruption (mins) - Water Supply            | Sum of total minutes of interruption divided by the total number of interruptions.   | From Col (78) Table 12                                |
| (15)   | Water Main Breaks (per 100km of main)  | Number of main breaks per 100km of main. A main break is where the water main has to be shut down. Excludes service connection breaks.   | From Col (42) Table 10                                |
| (16)   | Total Water Supply and Sewerage Complaints (no.)                               | Sum of water supply complaints (service, billing, water quality, other) and sewerage complaints (sewage chokes, service, billing, odour).  | $WB102 + SB40$  |
| (17)   | Average Annual Residential Water Supplied (kL/connected property)              | Average annual residential consumption (potable + non potable).  | From Col (56) Table 10                                |
| (18)   | Real Losses (L/connection/d) - Water Supply                                    | Real loss or leakage L per day per connection.   | From Col (41) Table 10                                |
| (19)   | % Sewage Treated that was Compliant  | The number of scheduled samples that complied in the reporting period divided by the number of scheduled samples in the reporting period.  | From Col (33a) Table 15                               |
| (20)   | Breaks and Chokes - Sewerage (No. per 100km of main)                           | Breaks and chokes are partial or total blockages resulting in an interruption to sewerage services or overflows at gully traps. Blockages in risers and sidelines are excluded.  | $SB64 \div (SB9 \div 100)$                            |
| (21)   | Recycled Water (% of effluent)   | Percent of Effluent Recycled   | From Col (41c) Table 15                               |
| (22)   | Recycled Water (Total ML)  | Total Effluent Recycled  | From Col (41a) Table 15                               |
| (23)   | Total Revenue - W&S (\$M)  | Sum of water supply revenue and sewerage revenue.  | $[Col (57) Table 11 + Col (42) Table 16] \div 1000$   |
| (24)   | Net Debt to Equity - W&S (%)   | See Col (26) of Table 5A   | From Col (26) Table 5A                                |
| (25)   | Capital Expenditure - W&S (\$/prop)  | Assets, renewals, plant/equipment.   | From Col (24b) Table 5A                               |
| (26)   | Capital Expenditure - W&S (\$M)  | Assets, renewals, plant/equipment.   | $Col (31a) Table 9 + Col (13a) Table 14$              |
| (27)   | Economic Real Rate of Return - Water Supply (%)                                | See Col (12) of Table 6  | From Col (12) Table 6                                 |
| (28)   | Economic Real Rate of Return - Sewerage (%)                                    | See Col (11) of Table 7  | From Col (11) Table 7                                 |
| (29)   | Full Cost Recovery - Water Supply (N / Y* / Y)                                 | Achieved if either the economic real rate of return or return on assets is $\geq 0$ , or if a LWU has significantly increased its charges to recover its costs.  | From Col (14d) Table 6                                |
| (30)   | Full Cost Recovery - Sewerage (N / Y* / Y)                                     | Achieved if either the economic real rate of return or return on assets is $\geq 0$ , or if a LWU has significantly increased its charges to recover its costs.  | From Col (11a) Table 7                                |
| (31)   | OMA Cost - Water Supply (\$/connected property)                                | See Col (67) of Table 11   | From Col (67) Table 11                                |
| (32)   | OMA Cost - Sewerage (\$/connected property)                                    | See Col (52) of Table 16   | From Col (52) Table 16                                |
| (33)   | Best Practice Implementation - Water Supply and Sewerage (%)                   | Implementation of the 19 requirements of the Best-Practice Management Framework for Water Supply and Sewerage.   | From Col (7) Table 3                                  |
| (34)   | Strategic Business Plans Completed? (Yes/No)                                   | 30-year Strategic Business Plan and financial plan are soundly based and are less than 5 years old.  | From Col (1) Table 3                                  |

**Notes:**

A. References to W\_ (eg. W\_15) refer to items in Special Schedules Nos 3 and 4 of each LWU's Annual Financial Statements. Similarly, references to S\_ (eg. S\_16) refer to each LWU's Special Schedules Nos 5 and 6. Note that dollar values in the Special Schedules are reported in '\$000 whereas the whole dollar value is used in these Tables and formulae.

B. Where LWU data is missing or ambiguous, the figure has been determined from other supporting information in accordance with section H2 on page 351.

C. References to WB and SB (eg. WB15, SB9) refer to questions in each LWU's Water Supply or Sewerage Performance Monitoring Database. Eg. refer to pages 213 and 227.

Formulae for calculation of performance indicators in table 5A

| 5A. 2014/15 NSW Water Utility Performance Summary |                                      |   |  |
|---|--------------------------------------|---|--|
| Column No.  | Performance Indicator                | Background to Formula   | Formula  |
| Water Supply & Sewerage                           |                                      |   |  |
| (23)  | Operating Cost (OMA) (\$/property)   | Total water supply and sewerage operation, maintenance and administration (OMA) costs (excluding cost of purchasing water) divided by number of connected properties. OMA includes engineering and supervision costs.   | Col (67) Table 11 + Col (52) Table 16  |
| (24)  | Income per Property (\$/property)    | Total income divided by total connected properties (water or sewerage)  | Col (24a) ÷ Col (20) Table 9   |
| (24a)   | Total Income (\$M)                   | Total income plus gain/loss on disposal of assets less grants for acquisition of assets less interest income.   | [(W_13 + W_14 - W_11a - W_9) + (S_14 + S_15 - S_12a - S_10)] ÷ 1,000,000   |
| (24b)   | Capital Expenditure (\$/property)    | Assets, Renewals, Plant/Equipment.  | (W_16 ÷ Col (20) Table 9) + (S_17 ÷ Col (3) Table 14)  |
| (24c)   | Return on Assets (%)                 | Total revenue less grants for acquisition of assets less total expenses plus revaluation decrements plus other expenses divided by written down replacement value of operational assets. Total revenue excludes gain/loss on disposal of assets. Operational assets include system assets plus plant and equipment.   | [(W_13 - W_11a - W_5 + W_4b + W_4c) + (S_14 - S_12a - S_5 + S_4b + S_4c)] x 100 ÷ (W_47 + W_33b + S_48 + S_34b)          |
| (25)  | Economic Real Rate of Return (%)     | Revenue from operations (water supply and sewerage) less operating expenses (OMA + current cost depreciation) divided by written down replacement value of water supply and sewerage operational assets. Revenue from operations excludes interest income, grants for acquisition of assets or gain/loss on disposal of assets. Operational assets include system assets and plant and equipment. | [(W_13 - W_9 - W_11a - W_1 - W_2 - W_3) + (S_14 - S_10 - S_12a - S_1 - S_2 - S_3)] x 100 ÷ (W_47 + W_33b + S_48 + S_34b) |
| (26)  | Net Debt to Equity - W&S (%)         | Net debt (water supply and sewerage) divided by equity (water supply and sewerage). Net debt is borrowings plus bank overdrafts less cash and investments. Equity is Total Assets less Total Liabilities.   | [(W_36 + W_38 - W_30) + (S_37 + S_39 - S_31)] x 100 ÷ (W_44 + S_45)  |
| (27)  | Interest Cover                       | Earnings before interest and tax (EBIT) for the whole water utility (water supply and sewerage) divided by net interest expense for the whole water utility (water supply and sewerage). The interest cover is nil for a loss making utility. Net interest expense is interest expenses less interest income and is zero for interest income greater than interest expense.                       | [(W_15a + W_4a - W_9 - W_14 + W_4b + W_4c) + (S_16a + S_4a - S_10 - S_15 + S_4b + S_4c)] ÷ (W_4a - W_9 + S_4a - S_10)    |
| (28)  | Dividend Payable (\$'000)            | Dividends paid, payable or proposed to be paid in relation to current year profit for the water and sewerage business for the whole water utility.  | From SPFR Notes 2 & 3  |
| (29)  | Dividend Payout Ratio (%)            | From SPFR Note 3  | (Dividend paid or payable or proposed) x 100 ÷ (Net profit after tax)  |
| (30)  | CSOs (\$'000)                        | Subsidy provided by government to allow for the provision of a service at less than the total cost. Eg. If legislation requires a utility to provide a \$100 reduction to the water bills for pensioners for which the government provides \$60, the CSO is \$60.   | From SPFR Note 3   |
| (31)  | % Revenue from CSOs                  | Revenue from CSOs divided by the total revenue (including CSOs).  | [Col (30) ÷ Col (24a) Table 5A] x 100  |
| (32)  | Net Profit After Tax (NPAT) (\$'000) | Surplus before dividends less tax paid.   | [(W_15a + S_16a) - Tax paid] ÷ 1000<br>From SPFR Notes 2 & 3   |
| (32a)   | NPAT Ratio                           | Net profit after tax divided by Total Income.   | Col (32) ÷ [Col (24a) Table 5A x 1000] x 100   |

- Notes:**
- A. References to W\_ (eg. W\_15) refer to items in Special Schedules Nos 3 and 4 of each LWU's Annual Financial Statements. Similarly, references to S\_ (eg. S\_16) refer to each LWU's Special Schedules Nos 5 and 6. Note that dollar values in the Special Schedules are reported in \$'000 whereas the whole dollar value is used in these Tables and formulae.
- B. Where LWU data is missing or ambiguous, the figure has been determined from other supporting information in accordance with section H2 on page 351.
- C. References to WB and SB (eg. WB15, SB9) refer to questions in each LWU's Water Supply or Sewerage Performance Monitoring Database. Eg. refer to pages 213 and 227.

Formulae for calculation of performance indicators in table 5B

| 5B. 2014/15 NSW Water Utility Performance Summary |  |  |                                  |
|---|--|--|----------------------------------|
| Column No.  | Performance Indicator  | Background to Formula  | Formula                          |
| Water Supply & Sewerage                           |  |  |                                  |
| (33)  | Billing Complaints (per 1000 properties)                             | Billing complaints for both water supply and sewerage businesses.  | (WB99 + SB37) ÷ Col (20) Table 9 |
| (34)  | % of calls answered by Operator within 30 seconds                    | Proportion of calls that, where the customer has selected a relevant operator option, are answered by an operator within 30 seconds.   | WB103                            |
| (35a)   | Greenhouse Gas Emissions - Water (tonnes CO2 per 1000 properties)    | The greenhouse gas emissions (CO <sub>2</sub> -equivalent) generated by the water utility, directly (scope 1) and indirectly (scope 2), through all its operations relating to water supply.   | WB148                            |
| (35b)   | Greenhouse Gas Emissions - Sewerage (tonnes CO2 per 1000 properties) | The greenhouse gas emissions (CO <sub>2</sub> -equivalent) generated by the water utility, directly (scope 1) and indirectly (scope 2), through all its operations relating to sewerage.   | SB80a                            |
| (35c)   | Greenhouse Gas Emissions - Other (tonnes CO2 per 1000 properties)    | This indicator is a balancing item, which reports the net greenhouse gas emissions generated by the water utility, directly (scope 1) and indirectly (scope 2) relating to other activities such as transport (vehicles) and office buildings. Scope 3 emissions are excluded. | WB148b + SB80b                   |
| (35d)   | Greenhouse Gas Emissions - Total (tonnes CO2 per 1000 properties)    | Total net greenhouse gas emissions from water, sewerage and other.   | WB148 + SB80a + WB148b + SB80b   |
| (36)  | Major Sources of Water   | The utility's major sources of water, including ground water in ML/d, surface water, bulk supply and the towns supplied to.  |                                  |
| (37)  | Storage Dams   | Major dams used to source water and their capacity.  |                                  |
| (38)  | Bulk Raw Water Supply  | Bulk raw water supplier.   |                                  |
| (39)  | >50% of Supply from Ground Water                                     | More than 50% of the utility's water is sourced from ground water.   |                                  |
| (40)  | No. Bores  | Bore holes connecting to an aquifer from which water is drawn.   | Col (29) Table 9                 |
| (41)  | Bulk Supplier (potable water)  | Bulk potable water supplier.   | WB51                             |

- Notes:**
- A. References to W\_ (eg. W\_15) refer to items in Special Schedules Nos 3 and 4 of each LWU's Annual Financial Statements. Similarly, references to S\_ (eg. S\_16) refer to each LWU's Special Schedules Nos 5 and 6. Note that dollar values in the Special Schedules are reported in '\$000 whereas the whole dollar value is used in these Tables and formulae.
- B. Where LWU data is missing or ambiguous, the figure has been determined from other supporting information in accordance with section H2 on page 351.

Formulae for calculation of performance indicators in table 5C

| 5C. Water Supply 2014/15 - Infrastructure Asset Condition and Performance |  |  |                                      |
|---|--|--|--------------------------------------|
| Column No.  | Performance Indicator  | Background to Formula  | Formula                              |
| (42)  | Written Down Value Current Replacement Cost per property (\$)                      | The written down value of the infrastructure assets divided by the number of connected properties.   | From Col (62a) Table 11.             |
| (43)  | Current Replacement Cost (CRC) of System Assets (\$'000)                           | The value of the infrastructure assets expressed in terms of how much it would cost to construct modern assets to provide the same function (ie. MEERA - Modern Engineering Equivalent Replacement Asset).   | Col (61) Table 11 x 1,000            |
| (44)  | Written Down Replacement Cost (\$'000)   | Written down replacement cost of system assets.  | Col (60) Table 11 x 1,000            |
| (45)  | Current Depreciation of System Assets (\$'000)                                     | Depreciation expense of system assets and plant and equipment.   | From Special Schedule 3: W_3a + W_3b |
| (46)  | Capital Expenditure (Total \$'000)   | Assets, renewals, plant/equipment.   | Col (31a) Table 9 x 1,000            |
| (47)  | Estimated Cost to Bring to a Satisfactory Standard (\$'000)                        | The amount of money that is required to be spent on an asset to ensure that it is in a satisfactory standard.  | From Special Schedule 7              |
| (48)  | Actual Annual Maintenance (\$'000)   | Amount spent in the current year to maintain the assets.   | From Special Schedule 7              |
| (49)  | Mains Maintenance Cost (\$'000/100km)  | Expenditure on maintenance of mains per 100km of main.   | From Col (48) Table 10               |
| (50)  | Rehabilitation of mains (km/100km)   | Length of mains rehabilitated per 100km of main.   | From Col (44) Table 10               |
| (51)  | Rehabilitation of service connections (%)  | Number of service connections rehabilitated as % of total.   | From Col (45) Table 10               |
| (52)  | Rehabilitation of water meters (%)   | Number of water meters rehabilitated as % of total.  | From Col (45a) Table 10              |
| (53)  | Asset Renewals (\$'000)  | Expenditure on renewals.   | From Special Schedule 3: W_16c       |
| (54)  | Asset Renewals (\$'000 per 100km of main)  | Expenditure on renewals per 100km of main.   | From Col (46) Table 10               |
| (55)  | Asset Renewals (% of CRC)  | Expenditure on renewals as percentage of Current Replacement Cost (CRC) of systems assets.   | From Col (47) Table 10               |
| (56)  | Assets in Condition as % of WDV  | Assets in condition one are considered to be excellent and that there is no work required (other than normal maintenance) while assets in condition five are considered to be very poor with urgent renewal or upgrading being required.   | From Special Schedule 7              |
| (57)  | Renewals Ratio (%)   | Asset renewals (building and infrastructure) divided by Depreciation, amortisation and impairment (building and infrastructure). (Expressed as a ratio).   | From Special Schedule 7              |
| (58)  | Backlog Ratio (%)  | Estimated cost to bring assets to a satisfactory condition divided by total written down value of infrastructure, building, other structures and depreciable land improvement assets.  | From Special Schedule 7              |
| (59)  | Asset Maintenance Ratio (%)  | Actual asset maintenance divided by Required asset maintenance.  | From Special Schedule 7              |
| (60)  | Capital Expenditure Ratio (%)  | Annual capital expenditure divided by Annual depreciation.   | From Special Schedule 7              |
| (61)  | Operating Cost OMA (\$/property)   | Total operation, maintenance and administration costs (plus proportion of bulk supplier OMA or purchase cost of water if no bulk supplier) divided by total number of connected properties.  | From Col (67) Table 11               |
| (62)  | Net Debt to Equity - W&S (%)   | Net debt (water supply and sewerage) divided by equity (water supply and sewerage). Net debt is borrowings plus bank overdrafts less cash and investments. Equity is Total Assets less Total Liabilities.  | From Col (26) Table 5A               |
| (63)  | Economic Real Rate of Return - Water Supply (%)                                    | Revenue from operations less operating expenses (OMA + current cost depreciation) divided by written down replacement value of operational assets. Revenue from operations excludes interest income and grants for acquisition of assets and gain/loss on disposal of assets. Operational assets include system assets plus plant and equipment. | From Col (12) Table 6                |
| (64)  | Main Breaks (per 100km of main)  | Number of main breaks per 100km of main. A main break is where the water main has to be shut down. Excludes service connection breaks.   | From Col (42) Table 10               |
| (65)  | Unplanned Interruptions to Supply (per 1000 properties)                            | Number of properties affected by unplanned interruptions to supply per 1000 properties. Includes each occurrence. Excludes breaks in service connections or instances of low pressure.   | From Col (43) Table 10               |
| (66)  | Real Losses (Leakage) (L/d/c)  | Real loss or leakage L per day per connection.   | From Col (41) Table 10               |
| (67)  | Water Quality Complaints (per 1000 properties)                                     | Complaints are any expression of customer dissatisfaction reported in person, by phone, fax, letter or email. Water quality complaints are reported under the relevant source water treatment works.   | From Col (73) Table 12               |
| (68)  | Water Service Complaints (per 1000 properties)                                     | Complaints are any expression of customer dissatisfaction reported in person, by phone, fax, letter or email.  | From Col (74) Table 12               |
| (69)  | % of Population with E. coli Compliance  | From population served and compliance achieved by each zone.   | From Col (71c) Table 12              |
| (70)  | Typical Residential Bill - Water Supply (\$/assessment)                            | Calculated using the average residential water supplied for 2014/15 multiplied by the usage charges for 2015/16 plus the access charge for 2015/16.  | From Col (8) Table 6                 |
| (70a)   | Drinking Water Management System (DWMS)? (Yes/No)                                  | May include HACCP, ISO 9001, WSAA ADWG Aquality assessment, ADWG Framework for Management of Drinking Water Quality.   | From Col (68a) Table 12              |
| (70b)   | No. of Water Treatment Operators Meeting National Certification Requirements (No.) | Operators with a Certificate III in Water Operations (Water Treatment) or equivalent; OR a NSW Office of Water Part 1 Certificate (Chemical Dosing Systems) or equivalent AND have completed chlorine safety training. Employed in operating a LWU treatment works or a chlorinator/aerator.   | From Appendix I: Col (1) + Col (2)   |
| (71)  | Best Practice Implementation - Water Supply (%)                                    | Implementation of the 10 requirements of the Best-Practice Management Framework for Water Supply.  | From Col (7) Table 3                 |
| (72)  | Strategic Business Plans Completed? (Yes/No)                                       | 30-year Strategic Business Plan and financial plan are soundly based and are less than 5 years old.  | From Col (1) Table 3                 |

**Notes:**

A. References to W\_ (eg. W\_15) refer to items in Special Schedules Nos 3 and 4 of each LWU's Annual Financial Statements. Note that dollar values in the Special Schedules are reported in \$'000 whereas the whole dollar value is used in these Tables and formulae.

B. Where LWU data is missing or ambiguous, the figure has been determined from other supporting information in accordance with section H2 on page 351.

| (85)  | Asset Renewals (% of CRC)                                     | Expenditure on renewals as percentage of Current Replacement Cost (CRC) of systems assets.  | From Col (30) Table 15               |
| (86)  | Assets in Condition as % of WDV                               | Assets in condition one are considered to be excellent and that there is no work required (other than normal maintenance) while assets in condition five are considered to be very poor with urgent renewal or upgrading being required.  | From Special Schedule 7              |
| (87)  | Renewals Ratio (%)  | Asset renewals (building and infrastructure) divided by Depreciation, amortisation and impairment (building and infrastructure). (Expressed as a ratio).  | From Special Schedule 7              |
| (88)  | Backlog Ratio (%)   | Estimated cost to bring assets to a satisfactory condition divided by total written   | From Special Schedule 7              |
| (89)  | Asset Maintenance Ratio (%)                                   | Actual asset maintenance divided by Required asset maintenance.   | From Special Schedule 7              |
| (90)  | Capital Expenditure Ratio (%)                                 | Annual capital expenditure divided by Annual depreciation.  | From Special Schedule 7              |
| (91)  | Operating Cost OMA (\$/property)                              | Total operation, maintenance and administration costs (plus proportion of bulk supplier OMA or purchase cost of water if no bulk supplier) divided by total number of connected properties.   | From Col (52) Table 16               |
| (92)  | Net Debt to Equity - W&S (%)                                  | Net debt (water supply and sewerage) divided by equity (water supply and sewerage). Net debt is borrowings plus bank overdrafts less cash and investments. Equity is Total Assets less Total Liabilities.   | From Col (26) Table 5A               |
| (93)  | Economic Real Rate of Return - Sewerage (%)                   | Revenue from operations less operating expenses (OMA + current cost depreciation) divided by written down replacement value of operational assets. Revenue from operations excludes interest income, grants for acquisition of assets and gain/loss on disposal. Operational assets include system assets plus plant and equipment. | From Col (11) Table 7                |
| (94)  | Breaks and Chokes (No. per 100km of main)                     | Breaks and chokes are partial or total blockages resulting in an interruption to sewerage services or overflows at gully traps. Blockages in risers and sidelines are excluded.   | From Col (24) Table 15               |
| (95)  | Infiltration (ML per 100km of main)                           | Estimated groundwater infiltration and stormwater inflow into the system per 100km of main.   | From Col (23) Table 15               |
| (96)  | Overflows (No. per 100km of main)                             | Recorded overflows in sewers, access chambers and pumping stations.   | From Col (25) Table 15               |
| (97)  | Service Complaints (per 1000 properties)                      | Service complaints including chokes and odour, but excluding billing. Exclude queries.  | From Col (62) Table 17               |
| (98)  | Sewage Treated that was Compliant                             | Percent of sewage volume treated that was compliant.  | From Col (59e) Table 17              |
| (99)  | Odour Complaints (per 1000 properties)                        | Odour complaints for treatment works, pumping stations and pipe network in your sewerage business.  | From Col (61) Table 17               |
| (100)   | Typical Residential Bill - Sewerage (\$/assessment)           | Calculated using the access charge for 2014-15 plus, if council has residential sewer usage charges, the average residential water consumption for 2013-14 multiplied by the usage charges and usage factor for 2014-15.  | From Col (8) Table 7                 |
| (100a)  | Pollution Incident Response Management Plan (PIRMP)? (Yes/No) | A Pollution Incident Response Management Plan (PIRMP) is made available on the utility's website for each sewage treatment works, as required by EPA.   | From Col (64a) Appendix D2           |
| (100b)  | No. of Wastewater Treatment Operators (No.)                   | The number of suitably qualified employees operating the utility's sewage treatment works.  | From Appendix I: Col (5)             |
| (101)   | Best Practice Implementation - Sewerage (%)                   | Implementation of the 9 requirements of the Best-Practice Management Framework for Sewerage.  | From Col (7) Table 3                 |
| (102)   | Strategic Business Plans Completed? (Yes/No)                  | 30-year Strategic Business Plan and financial plan are soundly based and are less than 5 years old.   | From Col (1) Table 3                 |

**Notes:**  
A. References to S\_ (eg. S\_16) refer to items in Special Schedules Nos 5 and 6 of each LWU's Annual Financial Statements. Note that dollar values in the Special Schedules are reported in \$'000 whereas the whole dollar value is used in these Tables and formulae.  
B. Where LWU data is missing or ambiguous, the figure has been determined from other supporting information in accordance with section H2 on page 351.

Formulae for calculation of performance indicators in table 6

| 6. Water Supply - 2014/15 Charges, 2015/16 Bills |   |  |   |
|--|---|--|---|
| Column No.                                       | Performance Indicator   | Background to Formula  | Formula   |
| (1)  | Type of Tariff  | Tariff structure - Two Part, Inclining Block, Unmetered.   | From Council's Schedule of Fees and Charges   |
| (2)  | Fixed Charge (or Minimum) (\$)  | Fixed charge component of tariff.  | From Council's Schedule of Fees and Charges   |
| (4)  | Special Levies (\$)   | Charges directly levied upon properties and are neither a fixed or pay-for-use charge for water or sewage (e.g. environmental improvement levy).   | From Council's Schedule of Fees and Charges   |
| (5a-d)   | Usage Charge for Steps 1 and 2 (c/kL)   | Includes first two steps of usage charges ("All" if no steps or blank if not applicable).  | From Council's Schedule of Fees and Charges   |
| (5e)   | Billing (2006 National Guidelines) (%) implementation)                          |  |   |
| (6)  | Operating Cost (OMA) c/kL   | Total operation, maintenance and administration cost (excluding purchase of water) divided by total annual town water supplied (potable + non-potable).  | $[W\_1 + W\_2] \times 100 \div [[Col (13) + Col (14) Table 8] \times 1000]$                 |
| (7)  | Typical Developer Charge (\$/Equivalent Tenement (ET))                          | Upfront infrastructure contribution for new developments.  | WB136 (see note C)  |
| (8)  | Typical Residential Bill (\$/assessment) (see note C)                           | Calculated using the average residential water supplied for 2013-14 multiplied by the usage charges for 2014-15 plus the access charge for 2014-15.  | $Col (5) \times Col (14a) \div 100 + Col (2) Table 6$                                       |
| (11)   | Return on Assets (%)  | Total revenue less grants for acquisition of assets less total expenses plus revaluation decrements plus other expenses divided by written down replacement value of operational assets. Total revenue excludes gain/loss on disposal of assets. Operational assets include system assets plus plant and equipment.                              | $[(W\_13 - W\_11a - W\_5 + W\_4b + W\_4c)] \times 100 \div (W\_47 + W\_33b)$                |
| (12)   | Economic Real Rate of Return (%)  | Revenue from operations less operating expenses (OMA + current cost depreciation) divided by written down replacement value of operational assets. Revenue from operations excludes interest income and grants for acquisition of assets and gain/loss on disposal of assets. Operational assets include system assets plus plant and equipment. | $(W\_13 - W\_9 - W\_11a - W\_1 - W\_2 - W\_3) \times 100 \div (W\_47 + W\_33b)$             |
| (13)   | Residential Revenue from Usage Charges (% of residential bills)                 | Revenue from residential usage charges divided by total residential revenue (residential usage plus access charges including any rates).   | $W\_6b \times 100 \div [W\_6a + W\_6b]$   |
| (14a)  | Average Annual Residential Water Supplied (potable) (kL/property)               | Average annual residential water supplied (potable). Where an LWU has not reported residential water supplied and at least one of commercial and industrial consumption, 58% of the total potable supply has been used.  | $[Col (1) Table 8] \div [Cols (18) \times (21) \times (22) Table 9]$                        |
| (14b)  | Average Annual Residential Water Supplied (potable + non potable) (kL/property) | Average annual residential water supplied (potable and non potable).   | $[Col (1) + Col (11) + Col (12a) Table 8] \div [Cols (18) \times (21) \times (22) Table 9]$ |
| (14c)  | Average Annual Residential Water Supplied (potable + non potable) (L/c/d)       | Average annual residential water supplied per capita per day.  | $[Col (1) + Col (11) + Col (12a) Table 8] \div [Col (23) Table 9] \div 365$                 |
| (14d)  | Full Cost Recovery? (N / Y* / Y)  | Achieved if either the economic real rate of return or return on assets is >=0, or if a LWU has significantly increased its charges to recover its costs.  | From NOW records  |
| (15)   | Total Connected Properties  | Total connected properties (residential plus non-residential).<br>Calculated from number of assessments multiplied by the ratio of connected properties to assessments.  | from Col (20) Table 9   |

- Notes:**
- A. References to WB (eg. WB99) refer to questions in each LWU's Water Supply Performance Monitoring Database. Eg. refer to page 213.
- B. References to W\_ (eg. W\_15) refer to items in Special Schedules Nos 3 and 4 of each LWU's Annual Financial Statements. Note that dollar values in the Special Schedules are reported in \$'000 whereas the whole dollar value is used in these Tables and formulae.
- C. Where LWU data is missing or ambiguous, the figure has been determined from other supporting information in accordance with section H2 on page 351.

- Notes:**
- A. References to WB (eg. WB99) refer to questions in each LWU's Water Supply Performance Monitoring Database. Eg. refer to page 213.
  - B. References to W\_ (eg. W\_15) refer to items in Special Schedules Nos 3 and 4 of each LWU's Annual Financial Statements. Note that dollar values in the Special Schedules are reported in \$'000 whereas the whole dollar value is used in these Tables and formulae.
  - C. Where LWU data is missing or ambiguous, the figure has been determined from other supporting information in accordance with section H2 on page 351.

Formulae for calculation of performance indicators in table 9

| 9. Water Supply - 2014/15 Utility Characteristics |  |   |  |
|---|--|---|--|
| Column No.  | Performance Indicator  | Background to Formula   | Formula                                  |
| (18)  | Total No. of Assessments (see note C)                                    | Where this data is ambiguous or missing, it has been estimated from other supporting information.   | WB36                                     |
| (18a)   | Number of Service Connections  | Number of physical connections to the water supply system (ie. A multiple dwelling with a single metered connection to the water supply system is counted as one connection).   | WB30                                     |
| (19)  | Ratio of Connected Properties to Assessments (see note C)                | This ratio has been determined from previous performance reports. It does not normally change from year to year and will be continued unless change is considered warranted by the LWU, in which case evidence of a different factor should be provided by the LWU. | WB37                                     |
| (20)  | Connected Properties   | Total connected properties (residential plus non-residential). Calculated from number of assessments multiplied by the ratio of connected properties to assessments.  | Col (18) x Col (19) Table 9              |
| (21)  | Ratio of Residential Assessments to Total Assessments (see note C)       | This ratio has been determined from previous performance reports. It does not normally change from year to year and will be continued unless change is considered warranted by the LWU, in which case evidence of a different factor should be provided by the LWU. | WB37a                                    |
| (22)  | Ratio of Residential Connections to Residential Assessments (see note C) | This ratio has been determined from previous performance reports. It does not normally change from year to year and will be continued unless change is considered warranted by the LWU, in which case evidence of a different factor should be provided by the LWU. | WB38                                     |
| (22a)   | Connected Residential Properties (No.)                                   | A residential property connected to the water supply system, which may or may not have a separate assessment.   | Col (18) x Col (21) x Col (22) Table 9   |
| (22b)   | New Residential Dwellings Connected (%)                                  | New residences connected this reporting year as percentage of connected residential properties.   | WB31 ÷ Col (22a) Table 9                 |
| (23)  | Permanent Population   | Where this data is ambiguous or missing, it has been estimated from other supporting information (financial data, previous year's data).  | WB1                                      |
| (24)  | Peak Population (% of permanent)   | Maximum population supplied anytime this reporting year.  | WB2 x 100 ÷ WB1                          |
| (25)  | Headworks Transfer Mains (raw water) (km)                                | Trunk mains which are part of the headworks system (eg. dam, river) for delivery of water either from scheme to scheme or to treatment works.   | WB20a                                    |
| (25a)   | Trunk and Reticulation Mains (km)  | Total length of mains including trunk mains and reticulation.   | WB22                                     |
| (26)  | Properties Served per km of main   | Total number of connected properties divided by length of mains.  | Col (20) ÷ Col (25a) Table 9             |
| (27)  | Water Treatment Works  | Number of works providing full treatment.   | WB17                                     |
| (28)  | Dams   | Number of dams.   | WB7                                      |
| (29)  | Bores  | Number of water supply bores.   | WB13                                     |
| (30)  | Pumping Stations   | Number of pumping stations.   | WB15                                     |
| (30a)   | Pumping Stations per 100km of main                                       | Number of pumping stations divided by length of main.   | Col (30) ÷ [Col (25a) ÷ 100] Table 9     |
| (31)  | Capital Expenditure (\$/property)  | Assets, renewals, plant/equipment.  | Col (31a) x 1,000,000 ÷ Col (20) Table 9 |
| (31a)   | Capital Expenditure (Total \$M)  | Assets, renewals, plant/equipment.  | W_16 ÷ 1,000,000                         |
| (31b)   | Capital Works Grants (\$'000)  | Grants for acquisition of assets.   | W_11a                                    |
| (32)  | Total Workforce (water supply) (Employees/1000 properties)               | Equivalent full time employees involved with water supply.  | WB120                                    |
| (34)  | % Undergoing Training  | % of employees in water supply workforce undergoing training for 2+ days during the year.   | WB122 x 100 ÷ WB120                      |
| (37)  | Outsourcing % of Maintenance Cost  | % expended on outsourcing for maintenance of water supply business.   | WB130                                    |
| (38)  | Number of Injuries   | Number of injuries (fatality, permanent disability or time loss of 1+ days) in water business.  | WB124                                    |
| (39)  | Total Days Lost (%)  | Number of days lost for all reasons (disputes, sick leave, accidents) in water supply business expressed as a percentage of the total number of days worked.  | WB123 ÷ (230 x WB120)                    |
| (40a)   | Days Lost due to Injuries  | Number of days lost due to injuries (time loss of 1+ days) in water supply business.  | WB125                                    |
| (40b)   | Days Lost due to Injuries (% of Total Days Worked)                       | Number of days lost due to injuries (time loss of one or more days) as a percentage of total days worked in water supply business.  | (WB125 x 100) ÷ (230 x WB120)            |

- Notes:**
- A. References to WB (eg. WB99) refer to questions in each LWU's Water Supply Performance Monitoring Database. Eg. refer to page 213.
- B. References to W\_ (eg. W\_15) refer to items in Special Schedules Nos 3 and 4 of each LWU's Annual Financial Statements. Note that dollar values in the Special Schedules are reported in \$'000 whereas the whole dollar value is used in these Tables and formulae.
- C. Where LWU data is missing or ambiguous, the figure has been determined from other supporting information in accordance with section H2 on page 351.

Formulae for calculation of performance indicators in table 10

| 10. Water Supply - 2014/15 Asset Management |   |   |  |
|---|---|---|--|

Formulae for calculation of performance indicators in table 10A

| 10A. Water Supply - 2014/15 Estimated Real Water Losses |  |  |  |
|---|--|--|--|
| Column No.  | Performance Indicator                              | Background to Formula  | Formula  |
| (1)   | Water Utility                                      | Only water utilities that participated in the Water Loss Management Program (WLMP) for Regional NSW Water Utilities are included.  | Appendix 1 of the WLMP Report.                               |
| (2)   | Zone   | Where water utilities have been divided up into different zones, these are listed separately.  | Appendices 3 and 4 of the WLMP Report.                       |
| (3)   | Utility Connections 2009-10 (No.)                  | Number of physical connections to the water supply system for the water utility in 2009-10 (ie. A multiple dwelling with a single metered connection to the water supply system is counted as one connection).                                 | Col (18a) Table 9 [2009-10 Benchmarking Report]              |
| (4)   | Zone Connections (No.)                             | Number of physical connections to the water supply system for each zone.   | Appendices 3 and 4 of the WLMP Report.                       |
| (5)   | Connection Ratio (Zone:Utility)                    | The ratio of connections for each zone to the total connections for the water utility.   | $100 \times \text{Col (4)} \div \text{Col (3)}$              |
| (6)   | ILI Before   | Infrastructure Leakage Index (ILI) before the WLMP.  | Appendices 3 and 4 of the WLMP Report.                       |
| (7)   | Utility Potable Annual Water Supplied 2009-10 (ML) | Sum of Total Revenue water plus Total Non-revenue water for the water utility in 2009-10.  | Col (10) Table 8 [2009-10 Benchmarking Report]               |
| (8)   | Estimated Water Loss - Before (L/c/d)              | Estimated water losses before leakage detection and repair.  | Appendices 3 and 4 of the WLMP Report.                       |
| (9)   | Estimated Water Loss - Before (ML)                 | Estimated water losses before leakage detection and repair.  | $\text{Col (8)} \times \text{Col (3)} \times 365 \div 10^6$  |
| (10)  | Estimated Water Loss - Before (%)                  | Estimated water losses before leakage detection and repair.  | $100 \times \text{Col (9)} \div \text{Col (7)}$              |
| (11)  | Estimated Water Loss - After (L/c/d)               | Estimated water losses after leakage detection and repair.   | Appendix 4 of the WLMP Report.                               |
| (12)  | Estimated Water Loss - After (ML)                  | Estimated water losses after leakage detection and repair.   | $\text{Col (11)} \times \text{Col (3)} \times 365 \div 10^6$ |
| (13)  | Estimated Water Loss - After (%)                   | Estimated water losses after leakage detection and repair.   | $100 \times \text{Col (11)} \div \text{Col (7)}$             |
| (14)  | Annual Water Savings (ML)                          | Annual water savings for each zone and the water utility as a whole after leakage detection and repair.  | $\text{Col (9)} - \text{Col (12)}$                           |
| (15)  | Test   | The type and extent of leakage detection and repair and/or pressure reduction undertaken for each water utility. Eg. L95 indicates that the leakage detection and repair project carried out covered 95% of the utility's service connections. | Appendix 4 of the WLMP Report.                               |
| (16)  | Test Year  | The year the above test was performed.   | Appendix 4 of the WLMP Report.                               |
| (17)  | Page   | Page reference of the water utility's project summary in the WLMP Report.  | Appendix 1 of the WLMP Report.                               |
| (18)  | Comments   | Details on any significant outcomes from the WLMP.   | Appendices 3 and 4 of the WLMP Report.                       |

**Notes:**  
A. Where LWU data is missing or ambiguous, the figure has been determined from other supporting information in accordance with section H2 on page 351.

Formulae for calculation of performance indicators in table 11

| 11. Water Supply - 2014/15 Financial, Efficiency |   |  |   |
|--|---|--|---|
| Column No.                                       | Performance Indicator   | Background to Formula  | Formula   |
| (57)   | Total Revenue (excl Capital Works Grants) (\$'000)                              | Total Revenue excluding grants for acquisition of assets, interest income and gain/loss from disposal of assets [Residential Charges + Non-residential Charges + Extra Charges + Other Revenues + Grants (excluding for Acquisition of Assets) + Contributions (Developer Charges + Developer Provided Assets + Other Contributions)]. | $(W_{13} - W_9 - W_{11a}) \div 1000$  |
| (57a)  | Revenue per property (\$)   | Total revenue per connected property.  | $[\text{Col (57) Table 11}] \times 1000 \div [\text{Col (20) Table 9}]$                       |
| (58)   | Residential Revenue (% of rates and charges total)                              | Where an LWU has not reported a breakdown of revenue from rates and charges and sales into residential and non-residential, the percentage revenue for such LWUs has been estimated from the reported percentages of similar LWUs.   | $(W_{6a} + W_{6b}) \times 100 \div (W_6 + W_7)$   |
| (59)   | Residential Water Supplied (% of potable water supplied excluding water losses) | % of potable water <u>excluding</u> water losses.  | $(WB54a \div WB62) \times 100$  |
| (58a)  | Residential Revenue from usage charges (%)                                      | Resential revenue from usage charges.  | $W_{6b} \times 100 \div (W_{6a} + W_{6b})$  |
| (60)   | Written Down Replacement Cost (\$M)   | Written down replacement cost of system assets.  | $W_{47} \div 1,000,000$   |
| (61)   | Current Replacement Cost (CRC) of System Assets (\$M)                           | The value of the infrastructure assets expressed in terms of how much it would cost to construct modern assets to provide the same function (ie. MEERA - Modern Engineering Equivalent Replacement Asset).   | $W_{45} \div 1,000,000$   |
| (62)   | Current Replacement Cost per Assessment (\$)                                    | The value of the infrastructure assets divided by the number of assessments.   | $W_{45} \div \text{Col (18) Table 9}$   |
| (63)   | Net Debt to Equity - W&S (%)  | All overdrafts, repayable borrowings, interest bearing non-repayable borrowings, advances and leases less cash and investments divided by total equity.  | $[(W_{36} + W_{38} - W_{30}) + (S_{37} + S_{39} - S_{31})] \times 100 \div (W_{44} + S_{45})$ |
| (62a)  | Written Down Value of Current Replacement Cost per property (\$)                | The written down value of the infrastructure assets divided by the number of connected properties.   | $W_{47} \div \text{Col (20) Table 9}$   |
| (63a)  | Economic Real Rate of Return (%)  | See Col (12) Table 6.  | From Col (12) Table 6.  |

| (70b)  | No. of Zones where Chemical Compliance was Achieved                        | Assessment with the chemical requirements of the water quality guidelines for each zone of the system.   | Report as number of zones complying out of the total number of zones |
| (70c)  | % of Population with Chemical Compliance                                   | From population served and compliance achieved by each zone.   |  |
| (71)   | Microbiological - % of Samples Complying with 2011 ADWG                    | E. coli water quality compliance (ADWG 2011) achieved - %.<br>E. coli contamination is the primary health-related indicator. Compliance refers to the number of samples taken for system performance monitoring and not the number of tests. Excludes samples taken for operational monitoring.                                    | see note D   |
| (71a)  | E. coli Compliance Achieved?   | E. coli water quality compliance (ADWG 2011) achieved - Yes or No. Also see 71 above.  | 'Yes' if Col (71) ≥ 98%  |
| (71b)  | No. of Zones where E. coli Compliance was Achieved                         | Assessment with the E. coli requirements of the water quality guidelines for each zone of the system.  | Report as number of zones complying out of the total number of zones |
| (71c)  | % of Population with E. coli Compliance                                    | From population served and compliance achieved by each zone.   |  |
| (73)   | Water Quality Complaints (per 1000 properties)                             | Complaints are any expression of customer dissatisfaction reported in person, by phone, fax, letter or email. Water quality complaints are reported under the relevant source water treatment works.   | (WB101a + WB101b) x 1000 ÷ Col (20) Table 9                          |
| (74)   | Water Service Complaints (per 1000 properties)                             | Complaints are any expression of customer dissatisfaction reported in person, by phone, fax, letter or email.  | WB96 x 1000 ÷ Col (20) Table 9                                       |
| (75a)  | Customers with Restrictions for Non-payment of Bills (per 1000 properties) | Restrictions and disconnections applied for non-payment of water bills in the reporting period.  | WB132a x 1000 ÷ Col (20) Table 9                                     |
| (75b)  | Customers with Legal Action for Non-payment of Bills (per 1000 properties) | Legal actions for non-payment of water bills in the reporting period.  | WB132b x 1000 ÷ Col (20) Table 9                                     |
| (77)   | Incidence of Unplanned Interruptions (No./1000 properties)                 | Includes each occurrence of unplanned interruptions to supply. Excludes reduced levels of service or breaks in service connections.  | WB105 x 1000 ÷ Col (20) Table 9                                      |
| (78)   | Average Duration of Interruptions (minutes)                                | Average duration of unplanned interruptions.   | WB107  |
| (78a)  | Drought Water Restrictions (% of time)                                     | Percent of time that water restrictions apply.   | (WB95 ÷ 365) x 100   |

- Notes:**
- A. References to WB and WT (eg. WB99, WT16) refer to questions in each LWU's Water Supply Performance Monitoring Database. Eg. refer to page 213.
- B. References to W\_ (eg. W\_15) refer to items in Special Schedules Nos 3 and 4 of each LWU's Annual Financial Statements. Note that dollar values in the Special Schedules are reported in '\$000 whereas the whole dollar value is used in these Tables and formulae.
- C. Physical compliance - sum for all treatment works, the product of WT16 multiplied by WT17 for each treatment works. Divide the total by the sum of WT16 for all treatment works.
- Chemical compliance - sum for all treatment works, the product of WT18 multiplied by WT19 for each treatment works. Divide the total by the sum of WT18 for all treatment works.
- D. Sum for all treatment works, the product of WT26 multiplied by WT27 for each treatment works. Divide the total by the sum of WT26 for all treatment works.
- An LWU complied with the 2011 NHMRC/NRMMC Australian Drinking Water Guidelines for E. coli if the required number of samples was tested and:
- At least 98% of the samples contained no E. coli*
- For LWUs which did not comply, the percentage of samples complying is shown.
- E. Where LWU data is missing or ambiguous, the figure has been determined from other supporting information in accordance with section H2 on page 351.

Formulae for calculation of performance indicators in table 13

| 13. Water Supply - 2014/15 Benchmarking Cost Data |   |   |  |
|---|---|---|--|
| Column No.  | Performance Indicator   | Background to Formula   | Formula  |
| (79a)   | Total O&M Cost (\$/property)  | Maintenance, Operation, Energy, Chemical and Bulk Purchase costs.                 | Col (79) + Col (80) + Col (81) + Col (82) + Col (82a) Table 13 |
| (79)  | Operating Cost Components - Maintenance (\$/property)                       | Maintenance cost of all water system assets.                                      | [W_2b + W_2d + W_2f + W_2i + W_2l + W_2n] ÷ Col (20) Table 9   |

| 17. Sewerage - 2014/15 Environmental, Levels of Service |  |   |  |
|---|--|---|--|
| Column No.  | Performance Indicator                            | Background to Formula   | Formula  |
| (55)  | EPA Licence Compliance BOD (%)                   | Compliance refers to the number of samples taken for system performance monitoring and not the number of tests.   | see note B                                     |
| (56)  | BOD 90 Percentile Discharge Licence Limit (mg/L) | Some councils only have 100 percentile licence limits for their treatment works. In this case the 100 percentile limits should be reported.                                 | see note B                                     |
| (57)  | EPA Licence Compliance SS (%)                    | Compliance refers to the number of samples taken for system performance monitoring and not the number of tests.   | see note C                                     |
| (58)  | SS 90 Percentile Discharge Licence Limit (mg/L)  | Some councils only have 100 percentile licence limits for their treatment works. In this case the 100 percentile limits should be reported.                                 | see note C                                     |
| (59a)   | EPA Licence Compliance N (%)                     | Compliance refers to the number of samples taken for system performance monitoring and not the number of tests.   | see note B                                     |
| (59b)   | EPA Licence Compliance P (%)                     | Compliance refers to the number of samples taken for system performance monitoring and not the number of tests.   | see note B                                     |
| (59c)   | EPA Licence Compliance Oil & Grease (%)          | Compliance refers to the number of samples taken for system performance monitoring and not the number of tests.   | see note B                                     |
| (59d)   | EPA Licence Compliance Faecal Coliform (%)       | Compliance refers to the number of samples taken for system performance monitoring and not the number of tests.   | see note B                                     |
| (59e)   | Sewage Treated that was Compliant (%)            | Percent of sewage volume treated that was compliant.  | see note E                                     |
| (59f)   | STWs Compliant at all times                      | Number of treatment works compliant with licence conditions.  | see note F                                     |
| (60)  | Compliance with Environmental Regulator (Y/N)    |   | see note C                                     |
| (61)  | Odour Complaints (per 1000 properties)           | Odour complaints for treatment works, pumping stations and pipe network in your sewerage business.  | SB39 x 1000 ÷ Col (3) Table 14                 |
| (62)  | Service Complaints (per 1000 properties)         | Service complaints including chokes and odour, but excluding billing. Exclude queries.  | [SB38 + SB34 + SB39] x 1000 ÷ Col (3) Table 14 |
| (65)  | Average Sewerage Interruption (minutes)          | Measured from time when utility is aware that sewerage services are no longer available. Sum of total minutes of interruption divided by the total number of interruptions. | SB43   |

- Notes:**
- A. References to SB (eg. SB9) refer to questions in each LWU's Sewerage Performance Monitoring Database. Eg. refer to page 227.
- B. For multiple treatment works, the Licence Compliance indicators are calculated as a weighted average on the basis of the number of sampling days for each treatment works.
- ie. For BOD compliance, sum for all treatment works, the product of ST50 multiplied by ST63 for each treatment works.
- Divide this total by the sum of ST63 for all treatment works.
- C. SS compliance is calculated in a similar manner to BOD compliance.
- ie. For SS compliance, sum for all treatment works, the product of ST52 multiplied by ST63 for each treatment works.
- Divide the total by the sum of ST63 for all treatment works.
- D. Where LWU data is missing or ambiguous, the figure has been determined from other supporting information in accordance with section H2 on page 351.
- E. From page 57 of the 2013-14 National Performance Framework.
- F. From page 59 of the 2013-14 National Performance Framework.

- Notes:**
- A. References to SB (eg. SB9) refer to questions in each LWU's Sewerage Performance Monitoring Database. Eg. refer to page 227.
- B. References to S\_ (eg. S\_16) refer to items in Special Schedules Nos 5 and 6 of each LWU's Annual Financial Statements. Note that dollar values in the Special Schedules are reported in \$'000 whereas the whole dollar value is used in these Tables and formulae.
- C. Where LWU data is missing or ambiguous, the figure has been determined from other supporting information in accordance with section H2 on page 351.

APPENDIX C: 2014-15 LOCAL WATER UTILITY TBL PERFORMANCE REPORTS

Coffs Harbour City Council Water Supply TBL Report (Page 1)

| Coffs Harbour City Council | TBL Water Supply Performance | 2014-15 |
|----------------------------|------------------------------|---------|
|----------------------------|------------------------------|---------|

WATER SUPPLY SYSTEM - Coffs Harbour City Council serves a population of 71,300 (25,060 connected properties). Water is sourced from the Nymboida River (part of the Regional Water Supply which includes Shannon Creek Dam) and also from the Orara River. Water is transferred to Karangi Dam where it is treated and supplied to the Coffs Harbour area which stretches from Sawtell to Corindi. Council has 2 storage dams at Karangi and Woolgoolga (total storage capacity 5,870ML), not including the 30,000ML Shannon Creek Dam. Council has 2 smaller systems providing treated water to Coramba and Nana Glen villages. The water supply network comprises a dissolved air flotation treatment works, a conventional water treatment works and a chlorinator, 18 service reservoirs (88 ML), 7 pumping stations, 43 ML/d delivery capacity into the distribution system, 157 km of transfer and trunk mains and 478 km of reticulation. 95% of water supplied is potable and 5% nonpotable (recycled).

PERFORMANCE - Coffs Harbour City Council achieved 100% implementation of the outcomes required by the NSW BPM Framework. The 2015-16 typical residential bill was \$588 which was close to the statewide median of \$593 (Indicator 14). The economic real rate of return was similar to the statewide median (indicator 43). The operating cost (OMA) per property was \$395 which was close to the statewide median of \$400 (Indicator 49). Water quality complaints were negligible compared to the statewide median of 3 (Indicator 25). Compliance was achieved for microbiological water quality (100% of the population, 3 of 3 zones compliant), chemical water quality and physical water quality. There were no failures of the chlorination system or the treatment system. Coffs Harbour City Council reported no water supply public health incidents. Current replacement cost of system assets was \$423M (\$15,900 per assessment). Cash and investments were \$29.4M, debt was \$77M and revenue was \$22M (excluding capital works grants).

IMPLEMENTATION OF OUTCOMES REQUIRED BY THE NSW BEST-PRACTICE MANAGEMENT (BPM) FRAMEWORK

- NOTES :
- Col 2 rankings are on a % of LWUs basis - best reveals performance compared to similar sized LWUs (ie. Col 1 is compared with LWUs with >10,000 properties).
  - Col 3 rankings are on a % of LWUs basis - best reveals performance compared to all LWUs (ie. Col 1 is compared with all LWUs).
  - Col 4 (Statewide Median) is on a % of connected properties basis- best reveals statewide performance (gives due weight to larger LWUs & reduces effect of smaller LWUs).
  - Col 5 (National Median) is the median value for the 76 utilities reporting water supply performance in the National Performance Report 2014-15 (www.bom.gov.au).
  - LWUs are required to annually review key projections & actions in the later of their IWCM Strategy and financial plan and their Strategic Business Plan and to annually 'roll forward', review and update their 30-year total asset management plan (TAMP) and 30-year financial plan.
  - 2015-16 Non-residential Tariff: Access Charge based on Meter Size: 40mm \$572, Two Part Tariff: Usage Charge 267c/kL.
  - Non-residential water supplied was 25% of potable water supplied excluding non-revenue water.  
Non-residential revenue was 24% of annual rates and charges, indicating fair pricing of services between the residential and non-residential sectors.
  - The operating cost (OMA) per property was \$395. Components were: management (\$153), operation (\$108), maintenance (\$104), energy (\$9) & chemical (\$17).
  - Rehabilitations included 0.3% of water mains, 0.14% of service connections and 5.8% of water meters. Renewals expenditure was \$12,000/100km of main.
  - Compliance with ADWG 2011 for drinking water quality is shown as "Yes" if compliance has been achieved (indicators 19, 19a & 20).
  - Coffs Harbour City Council has 3 fully qualified water treatment operators who meet the requirements of the National Certification Framework.
  - As Council's IWCM Strategy is over 6 years old, it will need to prepare a new 30-year IWCM Strategy, financial plan and report in accordance with the July 2014 IWCM Check List (www.water.nsw.gov.au).

Coffs Harbour City Council Sewerage TBL Report (Page 1)

Coffs Harbour City CouncilTBL Sewerage Performance2014-15

SEWERAGE SYSTEM - Coffs Harbour City Council serves a population of 70,200 (23,710 connected properties) and has 5 sewage treatment works providing secondary, advanced secondary, tertiary and advanced tertiary treatment. The system comprises 114,500 EP treatment capacity (Intermittent and Continuous Extended Aeration (Activated Sludge) and Biological Nutrient Removal), 117 pumping stations, 188 km of rising mains and 513 km of gravity trunk mains and reticulation. 14% of effluent was recycled (Indicator 27).

PERFORMANCE - Residential growth for 2014-15 was 1.3% which is higher than the statewide median. Coffs Harbour City Council achieved 100% implementation of the outcomes required by the NSW BPM Framework. The 2015-16 typical residential bill was \$806 which was above the statewide median of \$697 (Indicator 12). The economic real rate of return was 0.1% which was less than the statewide median (Indicator 46). The operating cost per property (OMA) was \$619 which was well above the statewide median of \$420 (Indicator 50). Sewage odour complaints were less than the statewide median of 0.8 (Indicator 21). Coffs Harbour Council reported 5 Category 2 (limited impact) environmental incidents. Council complied with the requirements of the environmental regulator for effluent discharge. The current replacement cost of system assets was \$659M (\$25,800 per assessment), cash and investments were \$48M, debt was \$93M and revenue was \$28.6M (excluding capital works grants).

NOTES :

- 1 Col 2 rankings are on a % of LWUs basis - best reveals performance compared to similar sized LWUs (ie. Col 1 is compared with LWUs with >10,000 properties).
- 2 Col 3 rankings are on a % of LWUs basis - best reveals performance compared to all LWUs (ie. Col 1 is compared with all LWUs). - see attachment.
- 3 Col 4 (Statewide Median) is on a % of connected properties basis- best reveals statewide performance (gives due weight to larger LWUs & reduces effect of smaller LWUs).
- 4 Col 5 (National Median) is the median value for the 75 utilities reporting sewerage performance in the National Performance Report 2014-15 (www.bom.gov.au).
- 5 LWUs are required to annually review key projections & actions in the later of their IWCM Strategy and financial plan and their Strategic Business Plan and to annually 'roll forward', review and update their 30-year total asset management plan (TAMP) and 30-year financial plan.
- 6 Non-residential access charge - \$789 x MF x SDF (MF - meter factor = [water meter size (mm)/20]^2 SDF - sewage discharge factor). Sewer usage charge - 209 c/kL.
- 7 Non-residential revenue was 21% of revenue from access, usage & trade waste charges. The sewage collected (residential, non-residential & trade waste) was not reported.
- 8 Compliance with Total N in Licence was 100%. Compliance with Total P in Licence was 100%.
- 9 Operating cost (OMA)/property was \$619. Components were: management (\$201), operation (\$122), maintenance (\$149), energy (\$78), chemical (\$15) & effluent/biosolids (\$55).
- 10 Coffs Harbour City Council rehabilitations included 0.7% of its sewerage mains and 0.2% of its service connections. Renewals expenditure was \$23,000/100km of main.
- 11 As Council's IWCM Strategy is over 6 years old, it will need to prepare a new 30-year IWCM Strategy, financial plan & report in accordance with the July 2014 IWCM Check List (www.water.nsw.gov.au).
- 12 Council has 5 fully qualified wastewater treatment operators who meet the NSW Certification requirements. 93% of employees received 2 or more days of training.

Notes:

1. The above NSW performance indicators are on a **percentage of LWUs** basis as this is the most appropriate basis for comparing the performance of one LWU with other LWUs. Throughout the rest of the report and in Table 1 on page 111 the performance indicators are on a **percentage of connected properties** basis as this is the most appropriate for judging **Statewide Performance** by giving due weight to larger LWUs and reducing the effect of smaller LWUs.

2. 20% is the top 20% of LWUs, **Median (50%)** is the median of LWUs and **80%** is the bottom 20% of LWUs.

3. National Medians are from the National Performance Report 2014-15 which shows the performance indicators for 76 Australian urban water utilities providing reticulated water supply services to >10,000 properties [Note 14 on page 34]. The 7 bulk supply utilities are excluded.

Sewerage Performance Percentiles (% of LWUs Basis) 2014-15

Notes:

1. The above NSW performance indicators are on a **percentage of LWUs** basis as this is the most appropriate basis for comparing the performance of one LWU with other LWUs. Throughout the rest of the report and in Table 2 on page 112 the performance indicators are on a **percentage of connected properties** basis as this is the most appropriate for judging **Statewide Performance** by giving due weight to larger LWUs and reducing the effect of smaller LWUs.

2. 20% is the top 20% of LWUs, **Median (50%)** is the median of LWUs and **80%** is the bottom 20% of LWUs.

3. National Medians are from the National Performance Report 2014-15 which shows the performance indicators for 75 Australian urban water utilities providing reticulated sewerage services to >10,000 properties [Note 14 on page 34].

## APPENDIX D1: 2014-15 WATER TREATMENT PERFORMANCE

- Notes:**
- The total number of water treatment works (WTW) involving at least filtration and disinfection is 163. These include C, DF, DAF, LS, MF and D (Note 2 below). The total number of chlorinators/aerators is 73. These include CH, A, OZ and UV (Note 2 below). Where a LWU has more than one treatment works/chlorinator, the compliance values have been pro-rated on the basis of the number of samples tested at each treatment works/chlorinator and are shown in bold in the final line for that LWU.  
The capacity (37b), potable water produced (37c), number of samples (eg. 42a) and number of water quality complaints (43) shown above are the totals for all treatment works with potable supply for that LWU. The number of days of chlorination system failure (45), and the number of days of major malfunction of treatment processes (46) shown above are the weighted average based on treatment works capacity. Non-potable supplies are not included in totals or compliance. Potable water produced (W11.3) for each WTW has been determined from the total potable water produced by the LWU pro-rated by the volume treated to potable for the WTW divided by the total volume treated to potable for that utility.
  - For "Type of Treatment Works" (38a): A = Aerated & Disinfected, C = Conventional Water Treatment, CH = Chlorination Only, DF = Direct Filtration, DAF = Dissolved Air Flotation, LS = Lagoon Sedimentation, MF = Microfiltration, D = Desalination, OZ = Ozonation, UV = Ultra-Violet Disinfection, NIL = No Treatment. As indicated in Note 1 above, water treatment works involving at least filtration and disinfection is limited to C, DF, DAF, LS, MF and D.
  - Physical, Chemical and *E. coli* results are from the NSW Health Drinking Water Monitoring Program and/or from the NSW Performance Monitoring Database.
  - A recent review has found that some LWUs had overstated physical and chemical compliance by reporting the number of analytes rather than the number of samples. Compliance is calculated as a percentage of samples so columns 42g and 42j above have been corrected by using the results provided by the NSW Health Drinking Water Monitoring Program. However, the reporting of additional samples has been accepted for those LWUs that have confirmed that they have undertaken additional sampling to that required by the Drinking Water Program (eg. MidCoast Water and Goldenfields Water). Note that commencing in the 2012-13 financial year, such additional sampling reported by LWUs is only included in Appendix D1 if the testing has been undertaken by a NATA accredited laboratory.
  - The additional Physical, Chemical and *E. coli* results from the NSW Health Drinking Water Monitoring Program have also been included in Tables 5 and 12 on pages 116 and 183 and Figures 15 to 17 on pages 53 to 55. As shown above and in Table 9 on page 169, the number of LWU water treatment works is 163 and the number of chlorinator/aerators is 73 (ie. a total of 236).
  - NSW Health provides Chemical and Microbiological monitoring allocations for each LWU. The sampling reported to NSW Health has been augmented to include sampling reported by LWUs for the NSW Performance Monitoring Database but not included in the Drinking Water Program (44a) and (44b). Columns 44a and 44b show that almost all LWUs have tested 100% of their allocated samples by NSW Health for chemical and *E. coli* water quality.
  - The basis for assessing drinking water quality compliance is set out in section H4.6 on page 355. In summary, a LWU has complied with the guidelines for microbiological water quality (ie. it is shown as "Yes" in Tables 5 and 12) if the required number of samples has been tested and at least 98% of samples had no *E. coli*.  
Similarly, chemical water quality (health related) is satisfactory (shown as compliant - 'Yes' in Tables 5 and 12)) if the 95th percentile of results meets the guidelines, and physical (aesthetic) water quality is satisfactory if the mean value of results meets the guideline values (shown as compliant - 'Yes' in Table 12).
  - The total water treatment capacity in regional NSW is 2,790 ML/d (column 37b) and the total potable water produced is 255 GL (column 37c). The total number of water quality complaints is 4,430 and the Statewide median is 3 complaints per 1,000 properties (columns 43).
  - All LWUs have met the physical, chemical and *E. coli* water quality requirements of ADWG (columns 42h, 42j and 42k).
  - All LWUs have a Drinking Water Management System (DWMS - column 44c).
  - The total number of fully qualified water treatment operators is 348 (column 44d). Refer also to Appendix I on page 360 and to page 36. Information on the DPI Water section 61 Reports for each treatment works is available in the NSW Performance Monitoring Database (refer to page 356).
  - For "Source/type (Bulk Supplier)": DS = dual supply, GW = groundwater, GQGW = good quality groundwater, ML = Menindee Lakes (Water NSW), NP = non-potable, RA = river abstraction (Water NSW), UF = unfiltered, B-ACT = bulk purchase (ACTEW), B-Alb = bulk purchase (Albury), B-FR = bulk purchase (Fish River), B-GF = bulk purchase (Goldenfields Water), B-Mrm = bulk purchase (Murrumbidgee Irrigation), B-Mry = bulk purchase (Murray Irrigation), B-RW = bulk purchase (Rous Water), B-NSW = bulk purchase (Water NSW).

- Notes:**
- Where a LWU has more than one treatment works, the reported Licence Compliance values have been pro-rated on the basis of the number of sampling days at each treatment works and are shown in **bold** in the final line for that LWU. Totals are also shown in **bold** for capacity (10), sewage volume treated (15), volume of effluent recycled (16), sampling days (65) and odour complaints (68). The days of major malfunction of treatment processes (67) are shown in bold and are the weighted average based on treatment works capacity.
  - For each licence limit, the value shown in the final line for each water utility is that required to be met for at least 50% of the utility's total licenced treatment works capacity.
  - For **"Standard of Treatment"** (3); P = Primary; S = Secondary; AS = Advanced Secondary; T = Tertiary; AT = Advanced Tertiary; nil = No Treatment. For **"Effluent Discharge"**; L = Land, O = Ocean, R = River.
  - For **"Type of Treatment Works"** (2); A= Oxidation Pond, AL = Aerated Lagoons, AN = Anaerobic Pond, BNR = Biological Nutrient Removal, C = Conventional Activated Sludge, CEA = Continuous Extended Aeration (Activated Sludge), CED = Common Effluent Disposal, IEA = Intermittent Extended Aeration (Activated Sludge), MBR = Membrane Bioreactor, RC = Dedicated Recycling, TF = Trickling Filter.
  - 90 Percentile Licence Limits have been reported at columns 49, 51, 53, 55, 57, 59, 61 and 70 unless noted as 100 percentile limits (100%) or no limits (NL).
  - The total sewage treatment capacity in regional NSW is 2,700,000 EP (column 10), the volume of sewage treated is 173 GL (column 15) and the volume of effluent recycled is 39 GL (column 16). The total volume of sewage collected is 179,000 ML (column 32 of Table 15 on page 192). The Statewide medians for % of sewage treated that was compliant (E4) and odour complaints per 1,000 properties are 100% and 1 respectively. Refer also to Tables 15 and 17 on pages 192 and 198.
  - Pollution Incident Response Management Plan - PIRMP - the sewage treatment works with a PIRMP available on the utility's website is shown in column 64a.
  - The total number of fully qualified sewage treatment works operators is 419. Refer also to Appendix I on page 360 and to page 36. Information on the DPI Water section 61 Reports for each treatment works is available in the NSW Performance Monitoring Database (refer to page 356).

APPENDIX D3: 2014-15 ABORIGINAL COMMUNITIES DRINKING WATER QUALITY RESULTS

**Notes:** 1. Drinking water quality for a Community has complied with the 2011 NHMRC/NRMMC Australian Drinking Water Guidelines (ADWG) for microbiological water quality (health related - shown as 'Yes' in column (10) above) if the required number of samples has been tested and at least 98% of samples had no *E.coli*. The 3 non-potable water supplies (column (3)) are not included in the totals or percent of communities for compliance with ADWG (columns (5), (8) and (11)), which are for the potable water supplied. For the 4 communities where the potable drinking water supply did not comply for microbiological water quality, 'No' is shown in column (10) and the percentage of samples which complied is shown in column (11). Where *E.coli* is detected in a microbiological sample, further investigation is needed to determine whether there is a real problem with drinking water quality in accordance with NSW Health protocol (<http://www.health.nsw.gov.au/environment/water/Pages/nswhrp-microbiological.aspx>).

2. Similarly, for chemical water quality (health related) to be satisfactory (shown as 'Yes' in column (7)), the 95th percentile of results must meet the guidelines and physical (aesthetic) water quality is satisfactory (shown as 'Yes' in column (4)) if the mean value of results meets the guideline values. Although physical and chemical samples were not tested for the 33 communities with '#' in columns (4) and (7), the water supply for the local water utility which supplies each of these communities complied with ADWG for both physical and chemical water quality in 2013-14 (Table 12 on page 183). The physical characteristics tested (aesthetic) are true colour, turbidity, total hardness as CaCO3, total dissolved solids (TDS) and pH. The chemical characteristics tested (health related) are antimony, arsenic, barium, boron, cadmium, chromium, copper, fluoride, lead, manganese, mercury, molybdenum, nickel, nitrate, nitrite, selenium, silver and sulfate. Other chemical characteristics tested which are not health related are aluminium, calcium, chloride, iodine, iron, magnesium, sodium and zinc.

APPENDIX D4: 2014-15 RECYCLING PERFORMANCE

| Water Utility             | Sewage Treatment Works <sup>1,6</sup> | Type of Treatment Works <sup>4</sup> | Sewage taken from sewer mining | Total Sewage Collected | Sewage supplied to other utilities | Sewage with no treatment | Sewage at inlet to STW | Recycled Sewage Effluent |                                   |              |               |         |       |                          |                                  |                             |                          | Treated Sewage Effluent | Percent treated sewage effluent recycled | Volume Effluent Disposed W29 |                            |                             | Flows                       |               |              |     |     |     |

### Assuring the safety of drinking water supplies

This Circular has been prepared to advise NSW local water utilities (LWUs) of an important new protocol for assuring the safety of all drinking water supplies in regional NSW. The protocol is robust and cost-effective and must be implemented by all LWUs providing a drinking water supply.

#### Protocol

Following its review of a number of recent boil water alerts<sup>1</sup> in regional NSW, DPI Water, in consultation with NSW Health and the NSW Water Directorate, has developed the new protocol, which is set out in Attachment 2 – Appendix E of the *2012-13 NSW Water Supply and Sewerage Benchmarking Report* ([www.water.nsw.gov.au](http://www.water.nsw.gov.au)). Appendix E documents the minimum requirements for ensuring each potable water supply is safe from microbial contamination. Under this protocol, each LWU will need to ensure that the **standard operating procedures (SOP)** for its water supply systems meet these requirements in order to achieve the following three key barriers:

**Barrier 1 – Effective disinfection** to kill, inactivate or remove pathogens in the water supply prior to distribution.

**Barrier 2 – Ensure distribution system integrity** to prevent contamination.

**Barrier 3 – Maintain free chlorine residual** in the water in the distribution system to help protect against minor contamination and as an indicator of a potential breach in distribution system integrity.

Together, these 3 barriers operate to assure the safety of each water supply and to prevent microbial contamination.

The *Public Health Act (2010)* requires each LWU to develop and implement a risk based Drinking Water Management System in accordance with the *NSW Guidelines for Drinking Water Management Systems*, NSW Health and NSW Office of Water, 2013. Activities related to disinfection and distribution system integrity should be clearly defined in each water utility's Drinking Water Management System, in accordance with the above Appendix E.

<sup>1</sup> Attachment 1 is a copy of page 10 of the 2014-15 NSW Water Supply and Sewerage Benchmarking Report which provides examples of recent failures of integrity of water supply distribution systems.

Once a water supply is effectively disinfected (Barrier 1), enteric pathogens should not reappear within the distribution system, unless there is a failure of the integrity of the distribution system. Maintaining the integrity of the distribution system (Barrier 2) is therefore the most important barrier to prevent contamination of a disinfected water supply. To verify and maintain integrity of all its distribution systems, each LWU must carry out the actions identified in section E3 of Appendix E as a matter of priority within **the next 12 months**. These actions include the following and need to be repeated at frequencies appropriate for each system, but no less than every **four (4) years**.

Carry out a careful and **detailed examination** of each service reservoir to ensure:

- (1) the reservoir and its roof are secured from entry by birds, animals, vermin and windborne contaminants;
- (2) rainwater cannot enter into the reservoir (i.e., no leaking roof or holes in the reservoir wall or gaps around the openings on the roof);
- (3) roof is adequately drained especially near the openings and landings. The roof should extend beyond the reservoir wall;
- (4) all inspection hatches are closed and locked at all times; and
- (5) the reservoir site and roof are secured from unauthorised access.

Where reservoir cleaning has been a routine activity for a water utility, reports from past cleaning episodes should be reviewed to find any reservoir integrity problems that have been identified but not corrected. Recent reports from experienced reservoir cleaners may satisfy the requirement for a detailed examination. Any deficiency in the roof or mesh design will need to be rectified by the LWU following such examination.

### Action

Each LWU will need to extend the standard operating procedures (SOP) for its water supply systems to meet the minimum requirements in Appendix E (Attachment 2) and to carry out the actions in section E3 of Appendix E within the next 12 months in order to ensure the integrity of its distribution systems and the safety of its water supplies.

### Reporting

Each LWU will need to complete the attached Summary Report (Attachment 3) following its detailed examination of the integrity of each of its water supply distribution systems in accordance with Appendix E (Attachment 2).

Further information on this matter is available from DPI Water by contacting Mr Bill Ho, Manager Water and Sewerage on 9842 8495 or [bill.ho@dpi.nsw.gov.au](mailto:bill.ho@dpi.nsw.gov.au).

Yours sincerely

**Michael Bullen**

**A/Deputy Director General, Water**

Encl. Attachments:

- (1) Copy of page 10 of 2014-15 NSW Benchmarking Report
- (2) Appendix E - Effective disinfection of a potable water supply and assuring integrity of the distribution system to prevent contamination of the supply
- (3) Summary Report – Distribution System Integrity

## Attachment 1

## Examples of Failure of Integrity of Distribution Systems

**Photo 1** shows the **hatch** of a 20m high service reservoir, which has inadvertently been **left open** for a few weeks. The result was repeat detections of *E. coli* in the reticulated water supply and the need to issue a boil water alert.

Photo 1 - Service reservoir hatch left open

**Photos 2 and 3** are underwater photos in the above service reservoir showing evidence of contamination by birds - **bird eggs & dead birds**.

Photo 2 - Bird eggs in reservoir

Photo 3 - Dead birds in reservoir

**Photo 4** is a service reservoir where the **mesh openings** are **too large** and the roof design is deficient, allowing the entry of small birds, rainwater and windblown material to contaminate the stored water. The reservoir roof needs to be modified so that roof runoff and windblown material cannot contaminate the stored water. **Photo 5** shows mesh openings that are also too large,

allowing entry of vermin, such as wasps and windblown material.

Photo 4 – Deficient reservoir roof design

Photo 5 - Large mesh openings on reservoir

The continued detection of *E. coli* in reticulated water supplies and boil water alerts in 2012 and 2013 have highlighted the need for a strategic approach for assuring the integrity of the distribution system to prevent contamination of a water supply that has been effectively disinfected. The recommended approach in Appendix E on page 305 was developed by DPI Water and NSW Health in consultation with the NSW Water Directorate and LWUs to provide a robust basis for assuring the safety of a water supply. As noted in the box on page 10, each LWU needs to review its present standard operating procedures (SOP) to ensure they address the minimum requirements in Appendix E for achieving safe water supplies:

Barrier 1 – **Effective disinfection** to kill, inactivate or remove pathogens in the water supply prior to distribution.

Barrier 2 – Ensure **distribution system integrity** to prevent contamination.

Barrier 3 – **Maintain free chlorine residual** in the water in the distribution system where practicable, to help protect against minor contamination and as an indicator of a potential breach in distribution system integrity.

## Attachment 2

## Effective disinfection of a potable water supply and assuring integrity of the distribution system to prevent contamination of the supply

### E1 Overview

This appendix highlights the key requirements for ensuring the effective disinfection<sup>22</sup> and assuring the safety of a potable water supply. Each NSW Local Water Utility (LWU) needs to ensure that the **standard operating procedures (SOP)** for its water supply systems **meet** these minimum requirements, in order to achieve the following three key barriers:

**Barrier 1 – Effective disinfection** to kill, inactivate or remove pathogens in the water supply prior to distribution.

**Barrier 2 – Ensure distribution system integrity** to prevent contamination.

**Barrier 3 – Maintain free chlorine residual** in the water in the distribution system to help protect against minor contamination and as an indicator of a potential breach in distribution system integrity.

Guiding principle 1 of the *Australian Drinking Water Guidelines* (below<sup>1</sup>) highlights the risks to consumers from pathogenic organisms and the paramount importance of protecting water sources and water treatment.

For **free chlorine** disinfection, **Figure 1** on page 314 shows how the above 3 barriers work together to provide a safe water supply.

In addition, as indicated in the *2014-15 NSW Water Supply and Sewerage Benchmarking Report* (page 9) each utility has now developed and needs to implement a risk based Drinking Water Management System in accordance with the *NSW Guidelines for Drinking Water Management Systems*, NSW Health and NSW Office of Water, 2013. These systems should include reference to sound standard operating procedures (SOP) in accordance with this Appendix and are required from 1 September 2014 under the *Public Health Act 2010*. Activities related to disinfection and distribution system integrity need to be clearly defined in each water utility's Drinking Water Management System (DWMS).

The *NSW Guidelines for Drinking Water Management Systems* is based on the Framework for the Management of Drinking Water Quality outlined in the *2011 Australian Drinking Water Guidelines* (ADWG) to assure the safety and quality of the water supplied to the consumers.

Effective disinfection of the source water and ensuring the integrity of the distribution system with or without a residual disinfectant are separate barriers (ADWG and above).

**Effective disinfection** of a water supply is essential to kill, inactivate or remove any pathogens in the water supply prior to distribution (Barrier 1 above). This could be achieved through a number of disinfection systems. Disinfection is a **critical control point** and must be appropriately monitored (ADWG).

**Preventing ingress of contaminants** at vulnerable points within the distribution system is a key **system integrity** barrier (Barrier 2 above) and **maintaining a residual disinfectant**<sup>23</sup> throughout the distribution

<sup>22</sup> Guiding principles 1 to 6 in Chapter 1 of the 2011 ADWG are listed below to provide an overall context to this Appendix:

- The greatest risks to consumers of drinking water are pathogenic microorganisms. Protection of water sources and treatment are of paramount importance and must never be compromised.
- The drinking water system must have, and continuously maintain, robust multiple barriers appropriate to the level of potential contamination facing the raw water supply.
- Any sudden or extreme change in water quality, flow or environmental conditions (e.g. extreme rainfall or flooding) should arouse suspicion that drinking water might become contaminated.
- System operators must be able to respond quickly and effectively to adverse monitoring signals.
- System operators must maintain a personal sense of responsibility and dedication to providing consumers with safe water, and should never ignore a consumer complaint about water quality.
- Ensuring drinking water safety and quality requires the application of a considered risk management approach.

<sup>23</sup> Refer to page 186 of ADWG (Version 2.0, December 2013), under 'managing water supplies with no disinfection residual'.

system is another barrier (Barrier 3 above). Together, the 3 barriers operate to assure the safety of each water supply. A sound verification monitoring program<sup>24</sup> is needed to assure that these three barriers<sup>25</sup> are functioning effectively. The monitoring frequency for each water supply system is dependent on its key characteristics identified through analysis and should be reviewed as part of a comprehensive risk assessment. The guidance in the following sections E2, E3 and E4 provides the minimum requirements for each barrier for inclusion in each LWU's standard operating procedures (SOP) for its water supply systems. Following risk assessment for its systems, a LWU may include additional requirements in its SOP where warranted.

Service reservoir integrity is a Critical Control Point for disinfected water supply and should be appropriately monitored (section E3).

## E2 Barrier 1 – Effective Disinfection

Disinfection is the single process that has had the greatest impact on drinking water safety. In Australia the common disinfection systems used include chlorination, chloramination, ultraviolet irradiation and ozonation. The advantages and disadvantages for each of these systems are discussed in detail in ADWG.

When chlorination is used, a source water is effectively disinfected when the required C.t values have been achieved (ADWG 2013, page 186). However, the C.t values used in the design of chlorine disinfection systems in Australia are generally higher than those required for effective disinfection (ADWG and WHO general recommendation is 0.5 mg/L of free chlorine residual after 30 minutes). The C.t values can be achieved by adjusting the chlorine dose or the contact time to provide a minimum C.t value of 15 mg/L/minute. The LWU should check the adequacy of this for its system.

To achieve effective disinfection of a water supply with **free chlorine**, monitoring of the following parameters prior to the distribution of the water should be included in your LWU's SOP as these parameters could diminish disinfection effectiveness:

- Monitor the factors which affect effective disinfection (e.g. chlorine residual, pH and turbidity). Refer to section E5 on page 313 in regard to matters to be included in a LWU's verification monitoring program. For each system, determine and document the contact time.
- Maintain appropriate levels of free chlorine residual above 0.5 mg/L<sup>26</sup> for the available<sup>27</sup> contact time to provide a C.t. value greater than 15 mg/L/minute.
- Keep turbidity as low as practicable (aim for <1 NTU<sup>28</sup>). Turbidity higher than 1 NTU is acceptable where the source water is free from faecal contamination or where the effectiveness of chlorination has been validated<sup>29</sup>.
- Keep pH <8.5<sup>30</sup>
- Thoroughly clean and super-chlorinate<sup>31</sup> before use, all new and repaired distribution system infrastructure that is in contact with potable water such as mains and reservoirs.

<sup>24</sup> Each LWU's drinking water monitoring program (testing for E.coli (i.e. sampling location, frequency and number of samples tested) needs, as a minimum, to be in accordance with the NSW Health requirements. These requirements are consistent with ADWG and the number of annual samples allocated for each LWU is shown in Appendix D1, *2014-15 NSW Water Supply and Sewerage Benchmarking Report*. Appendix D1 shows that the required number of samples has been collected and tested for almost all LWUs. Each water utility should assess its monitoring requirements to determine whether additional monitoring above this minimum is needed.

<sup>25</sup> For very small communities, typically serving a population of about 30, with a high quality source water such as groundwater from a confined aquifer, it may be cost-effective for the LWU to complete the actions outlined in section E3 on page 310 at 4-monthly intervals, rather than consistently maintaining a positive free chlorine residual disinfectant as long as the regular E.coli tests results continue to comply with ADWG. Refer also to the 4th paragraph of section E4 on page 312.

<sup>26</sup> Part IV Information Sheet 1.3, Disinfection with Chlorine, ADWG.

<sup>27</sup> If the source water does not contain pathogens (e.g., a good quality groundwater from a confined aquifer), no chlorine contact time is required.

<sup>28</sup> Table 10.5, ADWG.

<sup>29</sup> Monitoring test results which consistently find no E.coli in a water supply would validate the safety of the water supply.

<sup>30</sup> For effective disinfection pH should be as low as possible, but this needs to be tempered by the need for corrosion control. In most cases a pH of 7.8 to 8.2 is desirable.

Disinfection is a **critical control point** and must be adequately monitored, preferably continuously, to ensure effective disinfection (refer section E1). For **free chlorine** disinfection, in addition to an appropriate operational monitoring program, the minimum requirements to be included in the SOP are as follows:

1. Check that turbidity of the water being disinfected remains below the target critical limits for the system. Take appropriate corrective actions if the critical limits are exceeded.
2. Check the chlorine demand of the water supply being chlorinated as the raw water quality changes and adjust the chlorine dose rate accordingly to achieve the required residual.
3. Check the pH of water to be disinfected where a pH correction facility has been provided.
4. Confirm correct functioning of each chlorination plant.
5. Verify that the required chlorine dose rate has been added to the water supply<sup>32</sup>.
6. Provide continuous monitoring and/or daily testing of free chlorine residual at representative sampling points after the appropriate chlorine contact time.

For other types<sup>33</sup> of disinfection systems appropriate SOPs need to be developed to ensure effective disinfection.

### E3 Barrier 2 - Distribution System Integrity

Once a water supply is effectively disinfected, enteric pathogens should not reappear within the distribution system unless there is a failure of the integrity of the distribution system (ADWG 2013, page 186). Once a water supply has been effectively disinfected (Barrier 1), the disinfected water should remain safe to drink even in the **absence**<sup>34</sup> of a disinfectant residual. The integrity of the distribution system (Barrier 2) is therefore the most important barrier to prevent contamination of a disinfected water supply. To verify and maintain integrity of all its distribution systems, each LWU must carry out the following actions as a matter of priority within **the next 12 months**. Thereafter, **repeat** these actions at frequencies appropriate for each system but no less than every **four (4) years**.

- a. Carry out a careful and **detailed examination**<sup>35</sup> of each service reservoir to ensure:
  - 1) the reservoir and its roof are secured from entry by birds, animals, vermin and windborne contaminants;
  - 2) rainwater cannot enter into the reservoir (i.e., no leaking roof or holes in the reservoir wall or gaps around the openings on the roof);

<sup>31</sup> Chlorine Fact Sheet under Drinking Water Treatment Chemicals, ADWG.

<sup>32</sup> Check to ensure the storage tanks or cylinders have adequate chlorine. For sodium hypochlorite dosing plants complete a drop test to verify the accuracy of the chlorinator dosing rate as in some instances the released oxygen could interfere with the actual dosage rate. Also check the concentration of the sodium hypochlorite solution in the storage tank and adjust the dosage rate to allow for any loss of chlorine strength.

<sup>33</sup> Refer to Part IV Information Sheets 1.4 to 1.8 of ADWG.

<sup>34</sup> Where there is a risk of *Naegleria fowleri*, a free chlorine residual of 0.5mg/L or higher will control *N. fowleri*, provided the disinfectant residual persists throughout the distribution system (ADWG 'Disinfection with Chlorine' Information Sheet, page 191).

<sup>35</sup> Note that the careful and detailed examination of each service reservoir in steps (1) to (5) above is **NOT** a routine inspection, but rather a careful and detailed examination of each reservoir in order to detect and rectify any breaches of reservoir integrity. Such detailed examinations are necessary proactive measures to be undertaken by each LWU in order to detect and rectify breaches which are often not identified during routine inspections. There have been several recent instances where following detection of E.coli in the water supply and imposing a boil water alert, such detailed inspections have identified and rectified the breaches to reservoir integrity. The following paragraphs highlight that any **deficiency in the roof or mesh design** needs to be identified and **rectified** by the LWU following such examination.

It is essential all service reservoirs are designed and constructed to prevent ingress of contaminants. Additionally, for each service reservoir, a careful inspection of the reservoir roof, wall and mesh is essential in order to detect any breaches to the reservoir's integrity. As noted on page 12 of the *2014-15 NSW Water Supply and Sewerage Benchmarking Report*, 86% of the 22 boil water alerts in regional NSW during the period May 2006 to June 2008 have been due to such breaches in reservoir integrity. In most cases the breach was not visible from ground level and required use of mobile lifting equipment in order to detect the breach. Similarly a number of recent boil water alerts have been due to breaches in service reservoir integrity.

A confirmed detection of **E.coli** in a microbiological test sample should trigger a careful review by the LWU of whether the requirements of section E3 above have been met.

- 3) roof is adequately drained especially near the openings and landings. The roof should extend beyond the reservoir wall;
  - 4) all inspection hatches are closed and locked at all times; and
  - 5) the reservoir site and roof are secured from unauthorised<sup>36</sup> access.
- b. Check the air valves and ensure they are functioning in accordance with the manufacturer's standard operating procedures.
  - c. Check any backflow prevention devices and ensure they are operating in accordance with the manufacturer's standard operating procedures, tested in accordance with AS3500 and there is no cross contamination.
  - d. Check and ensure all potable water connections with a risk of cross contamination such as connections to sewerage facilities (pumping station, treatment works, etc.) are provided with backflow prevention devices and are regularly tested in accordance with AS3500.
  - e. Check and ensure all potable water connections to top up alternative water systems such as rainwater tanks/automatic switching device on premises are provided with backflow prevention devices (refer to Circular LWU 17) and are operating in accordance with the manufacturer's standard operating procedures, tested in accordance with AS3500 and there is no cross contamination.
  - f. Review the reservoir maintenance standard operating procedures to ensure they are sound and fit for purpose<sup>35,37</sup>.
  - g. Review the standard operating procedures for repair and re-instatement of distribution system infrastructure that comes into contact with potable water such as mains and reservoirs to ensure the procedures are sound and fit for purpose<sup>37</sup>.
  - h. Undertake all remedial works to assure system integrity as a matter of **priority**.

#### E4 Barrier 3 – Maintain a Free Chlorine Residual in the Water in the Distribution System

A residual disinfectant such as chlorine is maintained in the water within the distribution system to help protect against minor contamination due to a breach in the distribution system integrity (Barrier 2 above).

**Monitoring of free chlorine residual**, in the water in a distribution system on at least a weekly basis provides one of the key indications of the proper operation of the chlorination, of system integrity, and the necessary data for the utility to carry out timely corrective action. More frequent monitoring will provide more information to make better and timely decisions on changes to disinfection required to protect public health. On-site testing of free and total chlorine residual (and if possible pH and turbidity) should be carried out each time an E. coli sample is collected for testing by the NSW Health Drinking Water Monitoring Program for verification monitoring of the drinking water quality in accordance with ADWG. The ADWG suggests that:

- a minimum free chlorine residual of about 0.2mg/L<sup>38</sup> be maintained in the water throughout the distribution system. Re-chlorination may be necessary to achieve this chlorine residual in very extensive water supply distribution systems with long detention times.

<sup>36</sup> Where access to third parties (e.g., telephone companies, SES, NSW Police, etc.) has been given to install equipment, appropriate written reinstatement and communication protocols need to be established between the LWU and each third party to ensure the reservoir integrity is not compromised. The LWU must conduct regular audits to ensure the protocols are being effectively implemented. Similar protocols should also be effected between the LWU and any service providers authorised by the LWU to access its service reservoir. A financial penalty should be imposed for any failures to comply with the protocol as these may breach the distribution system integrity and result in E.coli contamination of the supply and the need for a boil water alert. A model 'service reservoir integrity protocol' will be prepared by DPI Water to assist LWUs.

<sup>37</sup> As noted in section E2 on page 309, ensure your LWU's standard operating procedures including contracts with service providers include super chlorination and effective disinfection of any new and repaired or replaced water mains and other distribution system infrastructure that is in contact with potable water before the infrastructure is commissioned or the water service is reinstated.

<sup>38</sup> Example in Table A1.10 on page A-20, ADWG. Such a chlorine residual can normally be achieved for the vast majority of consumers supplied by a water supply distribution system. However, as noted in the 2nd paragraph of page 312, it may be difficult to maintain such a residual at the extremities of a distribution system.

- a sudden large drop in free chlorine residual may be an indicator of a fault in the chlorination system or an increase in the chlorine demand of the water or a major breach in distribution system integrity.

When it is difficult to maintain the desired target free chlorine residual level of  $\geq 0.2\text{mg/L}$  at the extremities of your system, your LWU should using a trial and error process increase the free chlorine residual level at the dosing points to the maximum generally acceptable<sup>39</sup> to the community. Consideration should be given to providing re-chlorination for systems where there is a significant risk of contamination of the reticulated water supply.

Once the desired free chlorine residual of the dosed water has been achieved and if the free chlorine residual at the extremities of the reticulation system continues to consistently remain below  $0.2\text{mg/L}$  but greater than  $0.05\text{mg/L}$  with E.coli test results showing 100% compliance<sup>24</sup>, then the LWU should undertake the actions outlined in section E3 on page 310 on an **annual**<sup>40</sup> basis.

If however, the free chlorine residual level is consistently below  $0.05\text{mg/L}$  with E.coli test results showing 100% compliance<sup>24,41</sup> and the LWU can demonstrate the continuous integrity of the water supply distribution system<sup>42</sup>, the LWU should then undertake the actions outlined in section E3 on page 310 on a **four monthly**<sup>41</sup> basis and should also complete the following:

1. inspect and flush as needed the extremities of the system to remove 'stagnant' water.
2. opportunistically install pipe loops to any existing dead-end mains (i.e. as part of your LWU's repair and/or renewal work).

The measures in paragraphs 3 and 4 above are warranted in order to minimise capital and operating expenditure, while assuring safety of the water supply.

## E5 Develop a Verification Monitoring Program

The verification monitoring program developed by a LWU for each distribution system should include the following:

- Parameters to be monitored (e.g. disinfectant residual, pH and turbidity)<sup>43</sup>.
- Sampling frequency.
- Sampling locations including system extremities<sup>44</sup>.
- Sampling methods and equipment.
- Schedules for sampling.
- Methods for quality assurance and validation of sampling results.
- Requirements for checking and interpreting results.
- Responsibilities and necessary training<sup>45</sup> of staff including induction of contractors.

<sup>39</sup> The risk posed by disinfection by-products is considerably smaller than the risk posed by the presence of pathogenic microorganisms in water that has not been disinfected (Guiding Principle 1 of ADWG).

<sup>40</sup> The first action in section E3 on page 310 may be undertaken from ground level using a telescope, binoculars, etc.

<sup>41</sup> If the microbiological test samples regularly fail for E.coli then the LWU must investigate the reasons for the failures and consider maintaining a free chlorine residual of about  $0.2\text{ mg/L}$  on a consistent basis. This could be achieved by one of many options such as early warning control/communication systems, secondary chlorination plants, sub-system cleaning including air scouring/swabbing of the pipeline, super chlorination, etc. It is expected the preferred option would be chosen on the basis of a cost-benefit analysis.

<sup>42</sup> If the LWU is finding difficulty in ensuring the continuous integrity of the water supply system due to remoteness of the operating staff, etc. then the LWU could consider intermittent manual dosing of chlorine to boost the chlorine residual or installation of a secondary chlorination plant. It is expected the preferred option would be chosen on a cost-benefit analysis. Manual dosing could be accomplished by dosing the required quantity of chlorine tablets or sodium hypochlorite into the service reservoir servicing the sub-system and/or using a portable liquid chlorine chlorinator.

<sup>43</sup> For filtered water supplies, all the treated water should normally have a turbidity of less than 1 NTU, with 95 per cent of the supply having a turbidity of under 0.3 NTU.

<sup>44</sup> Each LWU's sampling locations for monitoring microbiological water quality for reporting in the NSW Water Quality Database would be suitable for this purpose.

- Requirements for documentation and management of records, including how monitoring results will be recorded and stored.
- Requirements for reporting and communication of results.

## **E6 Field Tests**

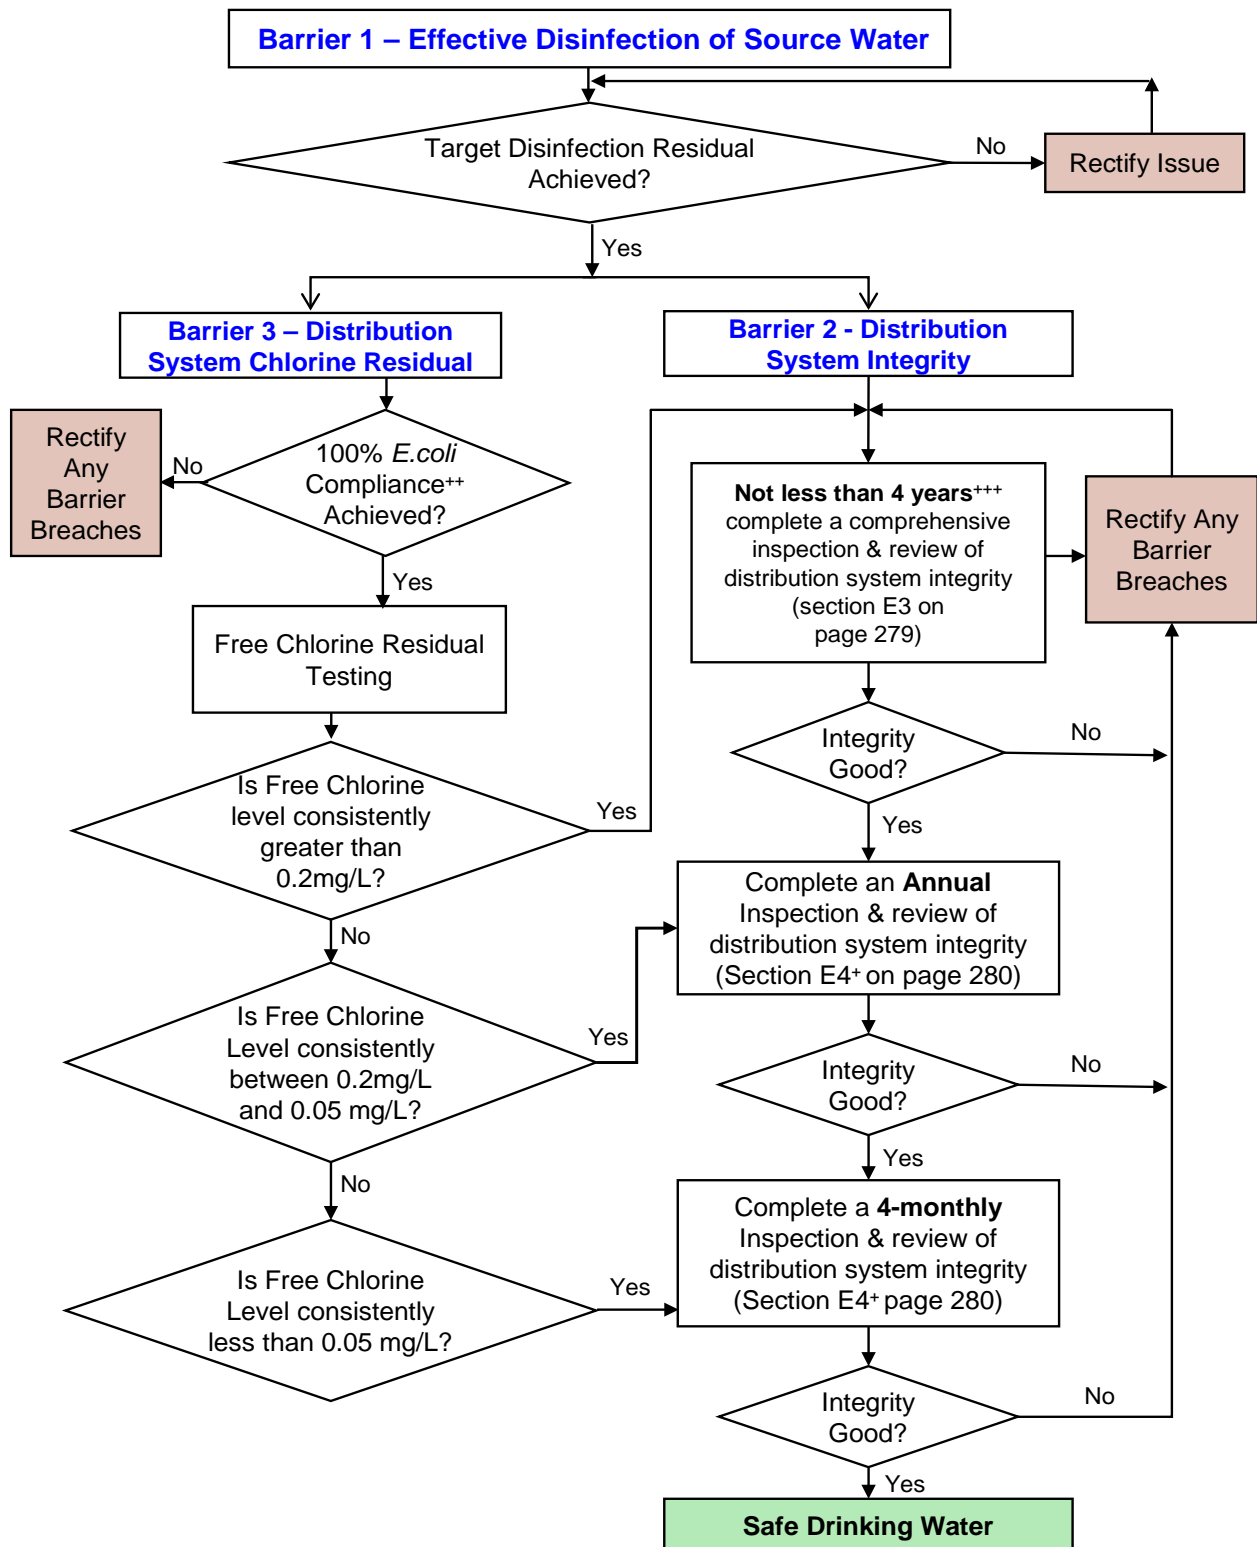

- Test kits for measuring chlorine residual, pH and turbidity are available.
- Chlorine residual, pH and turbidity measurements need to be done in the field.
- Ensure the operators have a thorough understanding of the field test kits especially the range they can measure, detection limits, error and interference tolerances.

If you wish to discuss any aspects covered in this Appendix, please contact the Manager Water and Sewerage, DPI Water on telephone: (02) 9842 8495 or email: [bill.ho@dpi.nsw.gov.au](mailto:bill.ho@dpi.nsw.gov.au).

---

<sup>45</sup> LWU water treatment operators need to have appropriate skills and qualifications in accordance with page 23 of the NSW Guidelines for Drinking Water Systems, 2013. Refer also to page 36 of the *2014-15 NSW Water Supply and Sewerage Benchmarking Report* ([www.water.nsw.gov.au](http://www.water.nsw.gov.au)) in regard to National Certification of Water Treatment Operators.

**Figure 1 – Effective disinfection<sup>1</sup> of a potable water supply and assuring integrity of the distribution system to prevent contamination of the supply**

+++ The first comprehensive inspection and review of water supply system integrity should be completed within 12 months in order to assure system integrity.

++ The 100% E.coli compliance requirement refers to test results where any failures in distribution system integrity have been detected and rectified by the LWU.

+ The actions in the 3rd and 4th paragraphs of section E4 on page 312 should be undertaken by the LWU over the next 12 months or 4 months respectively in order to assure continuing distribution system integrity. These actions are only applicable for the extremities of a distribution system where the free chlorine residual is consistently below 0.2 mg/L.

1 Figure 1 is on the basis of disinfection with free chlorine.

## APPENDIX G: NSW GREENHOUSE GAS CALCULATOR

### Overview

Greenhouse gases are produced from the use of fossil fuel in a water utility's operations, including transport and office accommodation, and are also produced from the chemical reactions resulting from the processing of sewage in a sewage treatment works.

The mass of greenhouse gas emissions can be calculated by applying appropriate conversion factors to the quantities of fuel consumed and by using appropriate formulae to calculate emissions from sewage treatment works.

The Federal Government provides guidance in the calculation of emissions and has published supporting information including tables of conversion factors, formula for the calculation of emissions from sewage treatment works and a calculator. See National Greenhouse and Energy Reporting published by the Federal Department of Environment at the following web address:

<http://www.environment.gov.au/climate-change/greenhouse-gas-measurement/nger>

However, the calculation of emissions is relatively complicated and, for sewage treatment works, requires the measurement or estimation of a number of factors. It requires the utility to assess the relevance and suitability of the appropriate factors and to apply these factors to its situation.

In order to assist NSW utilities in estimating the greenhouse gas emissions resulting from their water and sewerage operations, DPI Water has developed this greenhouse gas calculator for use by NSW utilities. This will simplify and standardise the process.

The calculator is a spreadsheet based on the Federal Government factors and also includes some simplifying assumptions for sewage treatment.

Utilities should review these assumptions to assess whether they are appropriate for their situation.

Where a utility has specific data or different circumstances, the calculator may not apply.

To calculate greenhouse gas emissions, utilities should follow steps A to D in the Instructions worksheet (see pink tab **Instructions**). These steps comprise:

- A** Emissions from water and sewerage operations - excluding STWs
- B** Emissions from Sewage Treatment Works (STWs)
- C** Carbon Offsets
- D** Total Emissions

Calculation of emissions for an example utility is shown at the green tabs **Example** and **Example STW**.

### Instructions

Calculate the emissions from your water and sewerage operations and also from your sewage treatment works by following steps A to D below<sup>46</sup>. The resulting emissions should be entered in your Performance Monitoring Database. This Calculator Spreadsheet is for guidance only and should not be forwarded to DPI Water.

An example is provided showing the procedure for calculation of emissions (see worksheets "**Example**" and "**Example STW**" (green tab)).

#### **A. Emissions from Water and Sewerage Operations - excluding Sewage Treatment Works (STWs)**

To calculate emissions from water and sewerage operations, go to worksheet "**Emissions**" (orange tab).

<sup>46</sup> Examples of common emission sources are shown in worksheet "**Emission Source Examples**" (yellow tab).

Collect the relevant data (quantities of each fuel combusted including electricity) for your water, sewerage and other operations.

Insert the quantities of each fuel in the appropriate blue shaded cells.

#### **B. Emissions from Sewage Treatment Works (STWs)**

To calculate emissions from the sewage treatment works, go to worksheet **"STW 1" (orange tab)**.

Insert the relevant data in the blue or green cells for your STW.

However, as an alternative to using the tables, you may use the graphs of emissions from typical sewage treatment works provided in the worksheet **"STW Graphs" (orange tab)**.

Repeat as necessary for each of your STWs in worksheets **"STW 2"** to **"STW 10" (orange tabs)**.

The emissions from each of your STWs are linked into the blue shaded cells for sewage treatment in the worksheet **"Emissions" (orange tab)**.

If you elect to use the **"STW Graphs"** worksheet to determine the emissions from an STW, override the value shown in the **"Emissions"** worksheet with the estimate obtained from the **"STW Graphs"** worksheet.

#### **C. Carbon Offsets**

Go to the worksheet **"Emissions" (orange tab)**.

Determine your utility's accredited sequestration (usually in the form of tonnes of carbon in tree plantations).

Enter the accredited sequestration in the blue shaded cell for sequestration (as a NEGATIVE NUMBER).

#### **D. Total Emissions**

Your utility's total greenhouse gas emissions will be shown at the bottom of worksheet **"Emissions" (orange tab)**.

Note that the worksheet **"Emissions"** is based on Tables 1 to 4 of the Australian Government Department of Climate Change "National Greenhouse Accounts (NGA) Factors". DPI Water will update this worksheet as updates become available.

Calculation of Emissions from Water and Sewerage Operations

A. CALCULATION OF EMISSIONS FROM WATER AND SEWERAGE OPERATIONS BY NSW WATER UTILITIES

Based on the NATIONAL GREENHOUSE ACCOUNTS (NGA) FACTORS updated annually

Insert Council Name and Year

- 1. Enter the annual quantity of fuel used in water, sewerage or other operations in the appropriate blue cells below.
- 2. Enter the data for each of your utility's STWs on sheets STW 1 to STW 10 OR override the value shown in the table below using the estimated emissions from the STW Graphs worksheet.
- 3. Enter the carbon offset (if any) in the cell for sequestration (as a NEGATIVE number).
- 4. The **TOTAL EMISSIONS** (tonnes CO2-e) are shown at the bottom of the table.

| FUEL or PROCESS UTILISED   | UNITS   | ANNUAL QUANTITY of FUEL USED                                |   |   |            | GREENHOUSE GAS EMISSIONS |                    |          |                 |
|--|---------|---|---|---|------------|--------------------------|--------------------|----------|-----------------|
|  |         | WATER SUPPLY OPERATIONS                                     | SEWERAGE OPERATIONS                                 | OTHER*  | TOTAL USED | WATER SUPPLY             | SEWERAGE OPERATION | OTHER*   | TOTAL EMISSIONS |
|  |         | Water source, storage, treatment, transfer and distribution | Sewage collection, storage, treatment and discharge | Transport (vehicles), office buildings, sequestration |            | t CO2 -e                 | t CO2 -e           | t CO2 -e | t CO2 -e        |
| ELECTRICITY PURCHASED FROM GRID  |         | Enter data into the blue cells only                         |   |   |            |                          |                    |          |                 |
| Electricity purchased from NSW or ACT Grid   | kWh     |   |   |   |            |                          |                    |          |                 |

\* OTHER is the estimated water and sewerage component of the fuel used in Councils' office buildings and vehicles and can also include sequestration as an offset (ie. a negative value).

## Calculation of Greenhouse Gas Emissions from Sewage Treatment Works

### B. CALCULATION OF GREENHOUSE GAS EMISSIONS FROM SEWAGE TREATMENT WORKS (STWs) - 2015

|       |  |  |
|-------|--|--|
| STW 1 | NAME OF STW  |  |
|       | Description of STW (eg. Trickling filter and oxidation pond) |  |

**INSTRUCTIONS**

To obtain an approximate GHG emission value, insert data in blue cells steps 1 or 2 and 3 and 7. Green cells may be left blank.

However, if more detailed information is available, insert this data in the relevant green cell. This will provide a more accurate estimate.

Total emissions are shown at step 18. To calculate emissions for additional STWs, see worksheets **STW 2 to STW 10** (orange tabs).

| SEWAGE TREATMENT WORKS |   | Input   | Result  |
|------------------------|---|---|---|
| 1 Inflow to STW        | Insert volume of sewage entering STW per year (if known)<br><b>OR</b>   | Volume influent = <span style="background-color: #ADD8E6; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span> | <span style="border: 1px solid black; display: inline-block; width: 20px; text-align: center;">0</span> ML  |
| 2 Population served    | Insert actual population served by STW (if inflow is known, this may be left blank)<br>(If population is unknown, it is approximated by assuming ADWF for residential sewage is 200L/cap/d) | Pop served = <span style="background-color: #ADD8E6; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span>      | <span style="border: 1px solid black; display: inline-block; width: 20px; text-align: center;">0</span> No. |

| EMISSIONS FROM TREATMENT OF WASTEWATER |  | Input  | Result |
|--|--|--|--------|
| 3 Type of Treatment                    | For wastewater treatment - select methane correction factor from Table G below   | MCF <sub>ww</sub> = <span style="background-color: #ADD8E6; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span>  |        |
| 4 COD in influent                      | Insert quantity of COD in influent wastewater (if unknown leave blank)<br>(If BOD in influent is known, COD in influent can be calculated from BOD x 2.6)  | COD <sub>w</sub> = <span style="background-color: #90EE90; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span>   | tonnes |
|  | <b>OR</b> If COD in influent is unknown, it is approximated by using a default of 0.0585 tonnes/capita   | COD <sub>w</sub> = <span style="border: 1px solid black; display: inline-block; width: 50px; text-align: center;">0</span>                       | tonnes |
| 5 COD in effluent                      | Insert quantity of COD in effluent leaving the STW (if unknown leave blank)<br>(If BOD in effluent is known, COD can be calculated from BOD x 2.6)<br>If COD in effluent is unknown, a default will be used as follows<br>COD <sub>eff</sub> = 0.08 x COD <sub>w</sub> | COD <sub>eff</sub> = <span style="background-color: #90EE90; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span> | tonnes |
|  |  | COD <sub>eff</sub> = <span style="border: 1px solid black; display: inline-block; width: 50px; text-align: center;">0</span>                     | tonnes |

|  |  |  |  |
|--|--|--|--|
| <b>6 METHANE EMISSIONS FROM WASTEWATER</b> | Emissions resulting from primary and secondary wastewater treatment (ie. from the "liquid train") are calculated as follows:<br>CH <sub>4</sub> gen <sub>ww</sub> = (COD <sub>w</sub> - COD <sub>sl</sub> - COD <sub>eff</sub> ) x MCF <sub>ww</sub> x EF <sub>w</sub> tonnes CO <sub>2</sub> -e |  | CH <sub>4</sub> gen <sub>ww</sub> = <span style="border: 1px solid black; display: inline-block; width: 50px; text-align: center;">0</span> t CO <sub>2</sub> -e |
|--|--|--|--|

where EF<sub>w</sub> = 5.3 tonnes CO<sub>2</sub>-e per tonne COD and MCF<sub>ww</sub> is shown at step 3  
and the quantity of COD removed as sludge (COD<sub>sl</sub>) from wastewater is obtained from step 8 below

| EMISSIONS FROM TREATMENT OF SLUDGE                          |  | Input  | Result |
|---|--|--|--------|
| 7 Sludge Treatment  | For type of sludge treatment - select the methane correction factor from Table G   | MCF <sub>sl</sub> = <span style="background-color: #ADD8E6; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span>  |        |
| 8 Volatile solids or COD in sludge treatment process        | Insert the quantity of volatile solids removed as sludge from wastewater and undergoing sludge treatment (if unknown leave blank)<br>Volatile solids in the primary sludge (VS <sub>p</sub> ). See Note d<br>Volatile solids in the waste activated sludge VS <sub>wasl</sub> . See Note e | VS <sub>p</sub> = <span style="background-color: #90EE90; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span><br>VS <sub>wasl</sub> = <span style="background-color: #90EE90; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span>    | tonnes |
|   | <b>OR</b> If quantity of volatile solids is unknown, insert quantity of COD removed as sludge from wastewater and treated at the plant (if unknown leave blank)  | COD <sub>sl</sub> = <span style="background-color: #90EE90; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span>  | tonnes |
|   | <b>OR</b> If COD <sub>sl</sub> is unknown, insert fraction of COD <sub>w</sub> removed as sludge from wastewater (if unknown leave blank)<br>Fraction COD removed as sludge (as a decimal eg. 1/3 is 0.33) F <sub>codsl</sub>  | F <sub>codsl</sub> = <span style="background-color: #90EE90; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span>   |        |
|   | The fraction of COD removed as sludge from wastewater (F <sub>codsl</sub> ) is calculated from the above. However, in the absence of other data, a default of 0.6 will be used for F <sub>codsl</sub>  | F <sub>codsl</sub> = <span style="border: 1px solid black; display: inline-block; width: 50px; text-align: center;">0.60</span>  |        |
|   | Quantity of COD in sludge COD <sub>sl</sub> = (VS <sub>p</sub> x 1.99 + VS <sub>wasl</sub> x 1.48) <b>OR</b> F <sub>codsl</sub> x COD <sub>w</sub>   | COD <sub>sl</sub> = <span style="border: 1px solid black; display: inline-block; width: 50px; text-align: center;">0</span>  | tonnes |
| 9 Sludge transferred out to landfill or other than landfill | Insert the quantity of volatile solids in sludge transferred after treatment to landfill or other than landfill (if unknown leave blank)<br>Volatile solids in sludge transferred to landfill<br>Volatile solids in sludge transferred to other than landfill                              | VS <sub>trl</sub> = <span style="background-color: #90EE90; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span><br>VS <sub>stro</sub> = <span style="background-color: #90EE90; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span>  | tonnes |
|   | <b>OR</b> If the volatile solids are unknown, insert the quantity of COD in sludge transferred (if unknown leave blank)<br>COD in sludge transferred to landfill<br>COD in sludge transferred to other than landfill   | COD <sub>trl</sub> = <span style="background-color: #90EE90; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span><br>COD <sub>tro</sub> = <span style="background-color: #90EE90; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span> | tonnes |
|   | Quantity of COD in sludge transferred out (COD <sub>tr</sub> = [VS <sub>trl</sub> + VS <sub>stro</sub> ] x 1.48 <b>OR</b> [COD <sub>trl</sub> + COD <sub>tro</sub> ])  | COD <sub>tr</sub> = <span style="border: 1px solid black; display: inline-block; width: 50px; text-align: center;">0</span>  | tonnes |

**NOTE:** The default COD<sub>tr</sub> is zero which results in a conservatively high emission value. If no sludge is transferred out in a particular year, but sludge is intermittently removed from a lagoon (eg once every 2 or 3 years), the quantity of COD in the sludge removed should be averaged over the cycle period as a quantity per year and inserted as COD<sub>trl</sub> to obtain a more accurate emission value.

|   |   |  |  |
|---|---|--|--|
| <b>10 METHANE EMISSIONS from SLUDGE TREATMENT</b> | Emissions resulting from <u>sludge treatment</u> (eg anaerobic digestors, lagoons, dewatering etc) are calculated as follows:<br>CH <sub>4</sub> gensl = (COD <sub>sl</sub> - COD <sub>tr</sub> ) x MCF <sub>sl</sub> x EF <sub>sl</sub> in tonnes CO <sub>2</sub> -e |  | CH <sub>4</sub> gensl = <span style="border: 1px solid black; display: inline-block; width: 50px; text-align: center;">0</span> t CO <sub>2</sub> -e |
|---|---|--|--|

where EF<sub>sl</sub> = 5.3 tonnes CO<sub>2</sub>-e per tonne COD and MCF<sub>sl</sub> is shown at step 7

**TOTAL METHANE EMISSIONS**

11 Methane generated Total methane generated from wastewater and from sludge  $CH_4gen = CH_4gen_{ww} + CH_4gen_{sl}$   $CH_4gen =$

12 Methane captured for combustion or flaring Insert volume of methane combusted or flared if applicable  $Q =$   m<sup>3</sup>  
 Insert methane recovered in digester if applicable (in tonnes CO<sub>2</sub>-e)  t CO<sub>2</sub>-e  
 Methane captured  $R = 0.0142464 \times Q$  OR tonnes recovered in digester  $R =$   t CO<sub>2</sub>-e  
 Methane flared or recovered in a digester is subtracted from total emissions

13 TOTAL METHANE EMISSIONS Total methane emissions =  $CH_4gen - R$  Total Methane Emissions  $CH_4gen - R =$   t CO<sub>2</sub>-e

**NITROUS OXIDE EMISSIONS**

14 Nitrogen in wastewater (N) Nitrogen entering STW (N<sub>in</sub>) assumed to be =  $0.036 \times 0.16 \times \text{Population}$  (tonnes N)  $N_{in} =$   t N

15 Nitrogen in sludge Dry mass of sludge transferred to landfill (M<sub>trl</sub>)  
 Insert M<sub>trl</sub> (if known). Else leave blank  $M_{trl} =$   tonnes  
 Nitrogen in sludge transferred to landfill (N<sub>trl</sub>) =  $0.05 \times M_{trl}$ , default =  $0.05 \times COD_{sl}$   $N_{trl} =$   t N  
 Nitrogen in sludge transferred to other than landfill (N<sub>tro</sub>) assumed to be zero  $N_{tro} =$   t N  
 Nitrogen in sludge  $N_{sl} = N_{trl} + N_{tro}$   $N_{sl} =$   t N

16 Nitrogen in effluent discharged to the environment ( $N_{out} = N_{encw} + N_{estw} + N_{cww}$ )  
 % effluent discharged to enclosed waters  %  $N_{encw} =$   t N  
 (ie. all waters other than estuarine or open coastal waters. Default is 100%)  
 % effluent discharged to estuarine waters  %  $N_{estw} =$   t N  
 % effluent discharged to open coastal waters  %  $N_{cww} =$   t N  
 Note that for most NSW utilities 100% of effluent will be discharged to enclosed wa  $N_{out} =$   t N

17 TOTAL NITROUS OXIDE EMISSIONS  $E_j = (N_{in} - N_{sl} - N_{out}) \times 4.9 + N_{encw} \times 4.9 + N_{estw} \times 1.2 + N_{cww} \times 0$  tonnes CO<sub>2</sub>-e  $E_j =$   t CO<sub>2</sub>-e

**18 TOTAL GREENHOUSE GAS EMISSIONS FROM STW**

Total GHG Emissions = Methane emissions plus Nitrous oxide emissions  $CH_4gen - R + E_j =$   t CO<sub>2</sub>-e

**NOTES:**

- Calculation of emissions from STWs requires estimation or measurement of various parameters including BOD or COD for inflow and outflow.
- The greenhouse gas emissions can be calculated using the NGER System Measurement Technical Guidelines (NGER Guidelines). The NGER Guidelines are available on the Department of the Environment website.
- The calculations above include a number of simplifying assumptions which have been based on typical STW operations shown at yellow tab **STW Assumptions**. However, where these assumptions are incorrect, they can be overridden as necessary.
- Primary sludge is from the first major treatment process in a STW that removes a substantial amount of suspended matter and no colloidal or dissolved matter.
- Waste activated sludge is from a secondary treatment process in a STW involving aeration and active biological material.
- Graphs have also been prepared based on typical STW operations for different inflows and populations. These are shown at orange tab **STW Graphs**.
- Table of default Methane Correction Factors for different types of treatment is shown below. See also yellow tab **STW Assumptions**

**TABLE G - METHANE CORRECTION FACTORS (MCF)**

| TREATMENT METHOD                    | Type of STW for each treatment method   | MCF Values |

Graphs of Emissions from different types of STW

Greenhouse gas emissions for typical types of treatment are graphed below against population and inflow. The graphs have been developed on the assumption that average dry weather flow from residential sewage is 200 L per capita per day and that the types of treatment correspond to the default fractions anaerobic shown in yellow tab **STW Assumptions**. Refer also to the other assumptions shown at yellow tab **STW Assumptions**.

Figure 1. Greenhouse Gases for Various STW Types - Based on Population

Figure 2. Greenhouse Gases for Various STW Types - Based on Volume of Inflow

Assumptions Adopted for the Calculation of Emissions from STWs

The following assumptions have been provided to assist in the calculation of emissions from STWs. Using these assumptions will enable a first approximation of greenhouse gas emissions. Where utilities have data available for quantities of BOD/COD in the treatment process, the assumptions below may not apply. Waste water treatment is a multi stage process in which the emissions from each stage can be separately calculated . This calculator assumes two stages, a waste water treatment stage and a sludge treatment stage. The emissions from each stage must be added to determine the total emissions. For example, treatment plants with sludge lagoons are calculated in two stages which are added together to determine the emissions. In general, formulae and factors shown below have been adopted from the "National Greenhouse And Energy System Measurement Technical Guidelines"

- (a)

COD in influent to STW (CODw)

BOD from domestic sewage is assumed to be 2.25 tonnes per annum per 100 persons  
COD is assumed to be 2.6 times BOD  
COD = 2.6 x 2.25 / 100 = 0.0585 tonnes per capita

COD in influent to the STW (CODw) can therefore be calculated from  
CODw = 0.0585 x population
- (b)

Population served

Where the inflow to the STW is known but the population served is unknown, an approximation for the population served can be calculated from the assumption that the average dry weather flow (ADWF) for residential sewage is 200 L per capita per day.
- (c)

Quantity of COD removed as sludge from wastewater and undergoing sludge treatment (CODsl)

CODsl = CODpsl + CODwasl  
where CODpsl is the quantity of COD removed as primary sludge from wastewater and undergoing sludge treatment and CODwasl is the quantity COD removed as waste activated sludge  
CODpsl = VSpsl x 1.99  
where VSpsl is the estimated volatile solids in the primary sludge  
CODwasl = VSwasl x 1.48  
where VSwasl is the estimated volatile solids in the waste activated sludge

The fraction of COD removed as sludge should be readily available from internal records of treatment plants.  
In the absence of actual data, it is assumed that the COD removed as sludge (CODsl) is about 60% of COD influent to the STW  
CODsl = 0.6 x CODw unless a better estimate is available from the estimated volatile solids.
- (d)

COD in effluent discharged from the STW (CODEff)

COD in effluent discharged from the STW is assumed to be  
CODEff = 0.08 x CODw If CODEff is known, the actual value should be inserted to override this assumption
- (e)

Methane emission factor for wastewater (EFw) and for sludge (EFsl)

Default emission factor for wastewater and for sludge is  
EFw = EFsl = 5.3 tonnes CO2-e / tonne COD
- (f)

Methane Correction Factor (Fraction of COD anaerobically treated in wastewater (MCFww) and in sludge (MCFsl))

Methane correction factors (MCF) for different types of treatment are provided in the NGER Guidelines and are shown in the table below.  
The type of STWs corresponding to each type of treatment are also shown in the table below
- (g)

Methane captured for combustion or flaring

Methane captured = 0.0142464 x Q in tonnes CO2-e (where Q is the volume in m3 of methane combusted, flared or transferred out)
- (h)

Methane emissions generated from wastewater treatment are calculated using the formula shown in the NGER Guidelines  
CH4genww = (CODw - CODsl - CODEff) x MCFww x EFw in tonnes CO2-e  
Using default values, this results in:  
CH4genww = (CODw x 0.63) x MCFww x 5.3 in tonnes CO2-e
- (i)

Methane emissions generated from sludge treatment are calculated using the formula shown in the NGER Guidelines  
CH4gensl = (CODsl - CODtrl - COD tro) x MCFsl x EFsl in tonnes CO2-e  
Where sludge is transferred to landfill or other than landfill on an intermittent basis (eg every 2 or 3 years), an approximation of the emissions can be obtained by assuming an average yearly transfer (otherwise in some years the calculated emissions would be negative).  
The default CODtro and CODtrl is zero which results in a conservative (high) emissions value if the COD transferred out is not taken into account.
- (j)

The total methane emissions are the sum of the wastewater emissions plus sludge emissions less the methane captured  
Total Methane Emissions = CH4genww + CH4gensl - methane captured in tonnes CO2-e

(k)

Nitrogen entering the plant is assumed to be

$$N_{in} = Protein \times Fracpr \times Population$$

where

Protein = 0.036 (default from NGER Guidelines)

Fracpr = 0.16 (default from NGER Guidelines)

(l)

Nitrogen in sludge transferred to landfill is assumed to be 0.05 times the dry mass of sludge transferred to landfill

$$N_{trl} = 0.05 \times M_{trl}$$

where  $M_{trl}$  is the dry mass of sludge transferred to landfill (default assumed to be CODsl)

Nitrogen in sludge transferred to other than landfill is assumed to be zero

$$N_{tro} = 0$$

(m)

Nitrogen in effluent is assumed to be that remaining in effluent after sludge has been removed

$$N_{out} = N_{in} - N_{trl} - N_{tro}$$

(n)

Nitrous oxide emissions ( $E_j$ ) are calculated using the formula shown in the NGER Guidelines

$$E_j = (N_{in} - N_{trl} - N_{tro} - N_{out}) \times EF_{secij} + N_{out} \times EF_{disij}$$

where  $EF_{secij}$  is the emission factor for wastewater treatment with default value of 4.9 tonnes  $N_2O$  measured in  $CO_2$ -e per tonne nitrogen and  $EF_{disij}$  is the emission factor for the discharge environments shown below in  $CO_2$ -e per tonne nitrogen

|  | $EF_{disij}$ |
|--|--------------|
| Discharge to enclosed waters<br>(ie. all waters other than estuarine or open coastal waters) | 4.9          |
| Discharge to estuarine waters  | 1.2          |
| Discharge to open coastal waters   | 0            |

For convenience, based on all of the above assumptions, graphs have been prepared for different types of STWs for different inflows or populations. These graphs are shown at the orange tab **STW Graphs**.

| TYPE OF TREATMENT                   | STW assumed for each type of treatment   | MCF Values |     |
|-------------------------------------|--|------------|-----|

| TOTAL EMISSIONS   | t CO2-e |         |   |   |   | 201.5                      | 586.6                                       | 11.9                | 800.0    |                 |     |        |     |
| * OTHER is the estimated water and sewerage component of the fuel used in Councils' office buildings. It also includes sequestration as a carbon offset where appropriate (this is entered as a negative value).  |         |         |   |   |   |                            |   |                     |          |                 |     |        |     |

## Calculation of Greenhouse Gas Emissions from Sewage Treatment Works

### B. CALCULATION OF GREENHOUSE GAS EMISSIONS FROM SEWAGE TREATMENT WORKS (STWs) - 2015

STW 1 **Example STW (Anaerobic lagoon <2m deep) serving 5,000 people**

Trickling filter and oxidation pond

#### INSTRUCTIONS

- To obtain an approximate GHG emission value, insert data in blue cells steps 1 or 2 and 3 and 7. Green cells may be left blank.
- However, if more detailed information is available, insert this data in the relevant green cell. This will provide a more accurate estimate.
- Total emissions are shown at step 18. To calculate emissions for additional STWs, see worksheets **STW 2 to STW 10** (orange tabs).

#### SEWAGE TREATMENT WORKS

|                     |   | Input   | Result           |
|---------------------|---|---|------------------|
| 1 Inflow to STW     | Insert volume of sewage entering STW per year (if known)<br><b>OR</b>   | Volume influent = <span style="background-color: #add8e6; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span> | <b>365</b> ML    |
| 2 Population served | Insert actual population served by STW (if inflow is known, this may be left blank)<br>(If population is unknown, it is approximated by assuming ADWF for residential sewage is 200L/cap/d) | Pop served = <span style="background-color: #add8e6; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span>      | <b>5,000</b> No. |

#### EMISSIONS FROM TREATMENT OF WASTEWATER

|  |   |  |                   |
|--|---|--|-------------------|
| 3 Type of Treatment  | For wastewater treatment - select methane correction factor from Table G below  | MCF <sub>ww</sub> = <span style="background-color: #add8e6; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span>  | <b>0.0</b>        |
| 4 COD in influent  | Insert quantity of COD in influent wastewater (if unknown leave blank)<br>(If BOD in influent is known, COD in influent can be calculated from BOD x 2.6) | COD <sub>w</sub> = <span style="background-color: #90ee90; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span>   | tonnes            |
| <b>OR</b> If COD in influent is unknown, it is approximated by using a default of 0.0585 tonnes/capita           |   | COD <sub>w</sub> = <span style="background-color: #add8e6; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span>   | <b>293</b> tonnes |
| 5 COD in effluent  | Insert quantity of COD in effluent leaving the STW (if unknown leave blank)<br>(If BOD in effluent is known, COD can be calculated from BOD x 2.6)        | COD <sub>eff</sub> = <span style="background-color: #90ee90; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span> | tonnes            |
| If COD in effluent is unknown, a default will be used as follows<br>COD <sub>eff</sub> = 0.08 x COD <sub>w</sub> |   | COD <sub>eff</sub> = <span style="background-color: #add8e6; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span> | <b>23</b> tonnes  |

|  |  |   |                               |
|--|--|---|-------------------------------|
| <b>6 METHANE EMISSIONS FROM WASTEWATER</b> | Emissions resulting from primary and secondary wastewater treatment (ie. from the "liquid train") are calculated as follows:<br>CH <sub>4</sub> gen <sub>ww</sub> = (COD <sub>w</sub> - COD <sub>sl</sub> - COD <sub>eff</sub> ) x MCF <sub>ww</sub> x EF <sub>w</sub> tonnes CO <sub>2</sub> -e | CH <sub>4</sub> gen <sub>ww</sub> = <span style="background-color: #add8e6; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span> | <b>0</b> t CO <sub>2</sub> -e |
|--|--|---|-------------------------------|

where EF<sub>w</sub> = 5.3 tonnes CO<sub>2</sub>-e per tonne COD and MCF<sub>ww</sub> is shown at step 3  
and the quantity of COD removed as sludge (COD<sub>sl</sub>) from wastewater is obtained from step 8 below

#### EMISSIONS FROM TREATMENT OF SLUDGE

|  |  |  |                   |
|--|--|--|-------------------|
| 7 Sludge Treatment   | For type of sludge treatment - select the methane correction factor from Table G   | MCF <sub>sl</sub> = <span style="background-color: #add8e6; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span>  | <b>0.2</b>        |
| 8 Volatile solids or COD in sludge treatment process   | Insert the quantity of volatile solids removed as sludge from wastewater and undergoing sludge treatment (if unknown leave blank)<br>Volatile solids in the primary sludge (VS <sub>p</sub> ). See Note d<br>Volatile solids in the waste activated sludge VS <sub>wasl</sub> . See Note e | VS <sub>p</sub> = <span style="background-color: #90ee90; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span><br>VS <sub>wasl</sub> = <span style="background-color: #90ee90; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span>    | tonnes            |
| <b>OR</b> If quantity of volatile solids is unknown, insert quantity of COD removed as sludge from wastewater and treated at the plant (if unknown leave blank)  |  | COD <sub>sl</sub> = <span style="background-color: #90ee90; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span>  | tonnes            |
| <b>OR</b> If COD <sub>sl</sub> is unknown, insert fraction of COD <sub>w</sub> removed as sludge from wastewater (if unknown leave blank)<br>Fraction COD removed as sludge (as a decimal eg. 1/3 is 0.33)           |  | F <sub>codsl</sub> = <span style="background-color: #90ee90; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span>   |                   |
| The fraction of COD removed as sludge from wastewater (F <sub>codsl</sub> ) is calculated from the above. However, in the absence of other data, a default of 0.6 will be used for F <sub>codsl</sub>                |  | F <sub>codsl</sub> = <span style="background-color: #add8e6; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span>   | <b>0.60</b>       |
| Quantity of COD in sludge COD <sub>sl</sub> = (VS <sub>p</sub> x 1.99 + VS <sub>wasl</sub> x 1.48) <b>OR</b> F <sub>codsl</sub> x COD <sub>w</sub>   |  | COD <sub>sl</sub> = <span style="background-color: #add8e6; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span>  | <b>176</b> tonnes |
| 9 Sludge transferred out to landfill or other than landfill  | Insert the quantity of volatile solids in sludge transferred after treatment to landfill or other than landfill (if unknown leave blank)<br>Volatile solids in sludge transferred to landfill<br>Volatile solids in sludge transferred to other than landfill                              | VS <sub>trl</sub> = <span style="background-color: #90ee90; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span><br>VS <sub>stro</sub> = <span style="background-color: #90ee90; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span>  | tonnes            |
| <b>OR</b> If the volatile solids are unknown, insert the quantity of COD in sludge transferred (if unknown leave blank)<br>COD in sludge transferred to landfill<br>COD in sludge transferred to other than landfill |  | COD <sub>trl</sub> = <span style="background-color: #90ee90; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span><br>COD <sub>tro</sub> = <span style="background-color: #90ee90; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span> | tonnes            |
| Quantity of COD in sludge transferred out (COD <sub>tr</sub> = [VS <sub>trl</sub> + VS <sub>stro</sub> ] x 1.48 <b>OR</b> [COD <sub>trl</sub> + COD <sub>tro</sub> ])  |  | COD <sub>tr</sub> = <span style="background-color: #add8e6; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span>  | <b>0</b> tonnes   |

**NOTE:** The default COD<sub>tr</sub> is zero which results in a conservatively high emission value. If no sludge is transferred out in a particular year, but sludge is intermittently removed from a lagoon (eg once every 2 or 3 years), the quantity of COD in the sludge removed should be averaged over the cycle period as a quantity per year and inserted as COD<sub>trl</sub> to obtain a more accurate emission value.

|   |   |   |                                 |
|---|---|---|---------------------------------|
| <b>10 METHANE EMISSIONS from SLUDGE TREATMENT</b> | Emissions resulting from <u>sludge treatment</u> (eg anaerobic digestors, lagoons, dewatering etc) are calculated as follows:<br>CH <sub>4</sub> gensl = (COD <sub>sl</sub> - COD <sub>tr</sub> ) x MCF <sub>sl</sub> x EF <sub>sl</sub> in tonnes CO <sub>2</sub> -e | CH <sub>4</sub> gensl = <span style="background-color: #add8e6; border: 1px solid black; display: inline-block; width: 50px; height: 15px;"></span> | <b>186</b> t CO <sub>2</sub> -e |
|---|---|---|---------------------------------|

where EF<sub>sl</sub> = 5.3 tonnes CO<sub>2</sub>-e per tonne COD and MCF<sub>sl</sub> is shown at step 7

**TOTAL METHANE EMISSIONS**

|  |   |             |                               |
|--|---|-------------|-------------------------------|
| <b>11 Methane generated</b>                          | Total methane generated from wastewater and from sludge $CH_4gen = CH_4gen_{ww} + CH_4gen_{sl}$ | $CH_4gen =$ | <b>186</b>                    |
| <b>12 Methane captured for combustion or flaring</b> | Insert volume of methane combusted or flared if applicable                                      | $Q =$       | <b>0</b> m <sup>3</sup>       |
|  | Insert methane recovered in digester if applicable (in tonnes CO <sub>2</sub> -e)               |             | <b>0</b> t CO <sub>2</sub> -e |
|  | Methane captured $R = 0.0142464 \times Q$ OR tonnes recovered in digester                       | $R =$       | <b>0</b> t CO <sub>2</sub> -e |
|  | Methane flared or recovered in a digester is subtracted from total emissions                    |             |                               |

|                                   |   |   |                                 |
|-----------------------------------|---|---|---------------------------------|
| <b>13 TOTAL METHANE EMISSIONS</b> | Total methane emissions = $CH_4gen - R$ | Total Methane Emissions $CH_4gen - R =$ | <b>186</b> t CO <sub>2</sub> -e |
|-----------------------------------|---|---|---------------------------------|

**NITROUS OXIDE EMISSIONS**

|   |   |              |                              |
|---|---|--------------|------------------------------|
| <b>14 Nitrogen in wastewater (N)</b>  | Nitrogen entering STW ( $N_{in}$ ) assumed to be = $0.036 \times 0.16 \times \text{Population}$ (tonnes N)          | $N_{in} =$   | <b>29</b> t N                |
| <b>15 Nitrogen in sludge</b>  | Dry mass of sludge transferred to landfill ( $M_{trl}$ )  | $M_{trl} =$  | <b>0</b> tonnes              |
|   | Insert $M_{trl}$ (if known). Else leave blank   |              |                              |
|   | Nitrogen in sludge transferred to landfill ( $N_{trl}$ ) = $0.05 \times M_{trl}$ , default = $0.05 \times COD_{sl}$ | $N_{trl} =$  | <b>8.8</b> t N               |
|   | Nitrogen in sludge transferred to other than landfill ( $N_{tro}$ ) assumed to be zero                              | $N_{tro} =$  | <b>0</b> t N                 |
|   | Nitrogen in sludge $N_{sl} = N_{trl} + N_{tro}$   | $N_{sl} =$   | <b>8.8</b> t N               |
| <b>16 Nitrogen in effluent discharged to the environment (<math>N_{out} = N_{encw} + N_{estw} + N_{ocw}</math>)</b> | % effluent discharged to enclosed waters  | <b>100</b> % | $N_{encw} =$ <b>20.0</b> t N |
|   | (ie. all waters other than estuarine or open coastal waters. Default is 100%)                                       |              |                              |
|   | % effluent discharged to estuarine waters   | <b>0</b> %   | $N_{estw} =$ <b>0.0</b> t N  |
|   | % effluent discharged to open coastal waters  | <b>0</b> %   | $N_{ocw} =$ <b>0.0</b> t N   |
|   | Note that for most NSW utilities 100% of effluent will be discharged to enclosed wa                                 | $N_{out} =$  | <b>20.0</b> t N              |

|   |   |         |                                |
|---|---|---------|--------------------------------|
| <b>17 TOTAL NITROUS OXIDE EMISSIONS</b> | $E_j = (N_{in} - N_{sl} - N_{out}) \times 4.9 + N_{encw} \times 4.9 + N_{estw} \times 1.2 + N_{ocw} \times 0$ tonnes CO <sub>2</sub> -e | $E_j =$ | <b>98</b> t CO <sub>2</sub> -e |
|---|---|---------|--------------------------------|

**18 TOTAL GREENHOUSE GAS EMISSIONS FROM STW**

|  |                       |                                 |
|--|-----------------------|---------------------------------|
| Total GHG Emissions = Methane emissions plus Nitrous oxide emissions | $CH_4gen - R + E_j =$ | <b>284</b> t CO <sub>2</sub> -e |
|--|-----------------------|---------------------------------|

**NOTES:**

- Calculation of emissions from STWs requires estimation or measurement of various parameters including BOD or COD for inflow and outflow.
- The greenhouse gas emissions can be calculated using the NGER System Measurement Technical Guidelines (NGER Guidelines). The NGER Guidelines are available on the Department of the Environment website.
- The calculations above include a number of simplifying assumptions which have been based on typical STW operations shown at yellow tab **STW Assumptions**. However, where these assumptions are incorrect, they can be overridden as necessary.
- Primary sludge is from the first major treatment process in a STW that removes a substantial amount of suspended matter and no colloidal or dissolved matter.
- Waste activated sludge is from a secondary treatment process in a STW involving aeration and active biological material.
- Graphs have also been prepared based on typical STW operations for different inflows and populations. These are shown at orange tab **STW Graphs**.
- Table of default Methane Correction Factors for different types of treatment is shown below. See also yellow tab **STW Assumptions**

**TABLE G - METHANE CORRECTION FACTORS (MCF)**

| TREATMENT METHOD                    | Type of STW for each treatment method   | MCF Values |
|-------------------------------------|---|------------|
| Managed aerobic treatment           | <ul style="list-style-type: none"> <li>Preliminary treatment (i.e. screens and grit removal)</li> <li>Primary sedimentation tanks (PST)</li> <li>Activated sludge processes, including anaerobic fermentation zones and anoxic zones for biological nutrient removal (BNR)</li> <li>Secondary sedimentation tanks or clarifiers</li> <li>Intermittently decanted extended aeration (IDEA), intermittently decanted aerated lagoons (IDAL) and sequencing batch reactors (SBR)</li> <li>Oxidation ditches and carousels</li> <li>Membrane bioreactors (MBR)</li> <li>Mechanically aerated lagoons</li> <li>Trickling filters</li> <li>Dissolved air flotation</li> <li>Aerobic digesters</li> <li>Tertiary filtration</li> <li>Disinfection processes (e.g. chlorination inc. contact tanks, ultraviolet, ozonation)</li> <li>Mechanical dewatering (e.g. centrifuges, belt filter presses)</li> </ul> | 0          |
| Unmanaged aerobic treatment         | <ul style="list-style-type: none"> <li>Gravity thickeners</li> <li>Imhoff Tanks</li> </ul>  | 0.3        |

# APPENDIX H: DATA VALIDATION PROCESSES FOR THE NSW PERFORMANCE MONITORING SYSTEM

## H1 Introduction

The *NSW Performance Monitoring System* (page 3) is a ‘one stop shop’ which minimises red tape, avoids duplication in reporting and enables DPI Water to annually provide the required local water utility (LWU) data to the Australian Bureau of Meteorology (BOM - for the annual National Performance Report for Urban Water Utilities ([www.bom.gov.au](http://www.bom.gov.au))) and the Australian Bureau of Statistics.

A prime objective of the *NSW Performance Monitoring System* is to reliably determine the statewide performance of the regional NSW local water utilities. This requires analysis of statewide medians and totals for key performance indicators in order to reveal historical trends and enable interstate performance comparisons<sup>47</sup>. A further objective is to publish performance data which is accurate and which is not misleading, both for individual LWUs and for statewide indicators. The achievement of these objectives is contingent on obtaining a full and accurate data set. To this end, DPI Water annually critically reviews all reported data to identify any anomalies or inconsistencies and undertakes actions where appropriate to validate and/or correct such anomalous data. In addition, in order to obtain a fully representative data set for six of the more critical performance indicators, DPI Water adopts the previous year’s reported data for those few LWUs that omitted to report such data for the current year. Such data is shown in italics bold in Tables 3 to 18 (section H3 on page 352).

In addition to the extensive independent auditing of the reported NSW data (page 3 and footnote 48 on page 353), this appendix outlines the data validation processes undertaken by DPI Water to identify and address apparent anomalies in the reported data and to develop a full data set which assures ongoing data reliability for the *NSW Performance Monitoring System*.

DPI Water is responsible for managing implementation of Goal 21 of the State Plan NSW 2021 for regional NSW, the NSW Government’s *Country Towns Water Supply and Sewerage (CTWSS) Program* ([www.water.nsw.gov.au](http://www.water.nsw.gov.au)), which is a major reform program and the Regional Water and Waste Water Backlog (RWWWB) program. DPI Water oversees and monitors utility performance, provides leadership, guidance, software and training (page 9) to the utilities and is the primary regulator for the 105 regional LWUs.

## H2 Anomalous data

The quality and consistency of data reported by LWUs in the *NSW Performance Monitoring Database* varies significantly. To assist LWUs in reporting their data, the database includes a facility that screens the data and provides an alert to notify the user where data is inconsistent, out of range or incomplete. Most LWUs accurately report their performance data. However, review by DPI Water of the full data set from all LWUs consistently reveals a small but significant percentage of anomalous data. This may arise due to misinterpretation of an indicator definition, due to errors in data handling (input or misreading), due to inconsistencies in the data stream or due to errors/omissions in the data itself.

Data that is inconsistent or anomalous includes:

- **Incomplete data** - data that is not reported or left blank in the current year’s reported data.
- **Inconsistent data** - reported data that is inconsistent with historic values or out of expected range.
- **Errors in data** - reported data that is in error (e.g. text instead of numerals, percentage greater than 100, data where the summation does not agree etc.).
- **Unsubstantiated data** - reported data that is out of expected range with no substantiating evidence (e.g. leakage less than 6% of the total water supplied or a reported number of assessments which differs significantly from historical trends or from that reported in the utility’s Annual Financial Statements).

<sup>47</sup> Refer to page 17 of the *2014-15 NSW Water Supply and Sewerage Performance Monitoring Report*, section 5.3 on page 19, Table 4 on page 111 and Appendix A on page 204. Such performance comparisons may provide valuable insights on opportunities for continuing to improve performance and to provide better value for money to residents.

- **Data that conflicts with data from other sources** - reported data that differs significantly from data available elsewhere (e.g. drinking water quality compliance results from NSW Health, data from the LWU's annual financial statements, IWCM Strategies etc.).

Anomalous data must be reviewed and either validated or rejected. The procedures undertaken by DPI Water to validate data are outlined in the following sections.

### H3 Validation of data

DPI Water undertakes various broad screening procedures and follows this up with intensive manual and computerised validation procedures. The criteria used in the validation process for the more critical indicators are shown in section H4 on page 353. Following screening and validation, DPI Water reviews all anomalous reported values and anomalies are either:

- referred to the LWU for confirmation, or
- adjusted where relevant data from other sources is available, or
- rejected and left as blank, or
- adjusted where the reported value is unsubstantiated or does not meet adopted criteria.

In addition, in order to enable reporting of statewide totals and medians for six of the more critical indicators (Total Urban Water Supplied, Operating Cost, Management Cost, Current Replacement Cost, Total Volume of Sewage Collected and Volume of Effluent Recycled), where a LWU has not reported current data, the data reported for the previous year has been adopted and is shown in *italics bold* in Tables 3 to 18 of this Report.

It is noted that the 105 NSW LWUs each report more than 180 water supply indicators and a similar number of sewerage indicators together with their financial indicators (from the LWUs' Annual Financial Statements). Of these indicators, approximately 50 for each of water supply and sewerage are key indicators which are shown on each LWU's annual TBL Performance Report (pages 274 to 277). Of these 50 key indicators, 20 are considered to be critical indicators to determine a LWU's performance and the criteria for validating these critical indicators are described in section H4 on page 353.

Screening and validation procedures identify the more significant anomalies, and anomalies occurring in key indicators will be followed up with the LWU. However, there may be instances where an error is not identified. To allow for this, DPI Water also provides a draft copy of tables of performance indicators to each LWU for its review prior to finalisation of the annual report.

DPI Water procedures for validation and adjustment of selected data are detailed below.

**Incomplete data** - Where a LWU has not reported data, the validation process is as follows:

- For critical indicators, refer to the criteria outlined in section H4.
- For other key indicators, DPI Water will contact the LWU to obtain such data, unless the reported value can be adjusted in accordance with data obtained from an alternative source.
- For less significant indicators, the field will be left blank.

**Inconsistent data** - Where the reported value is inconsistent with historic values, out of expected range or otherwise inconsistent, the validation process is as follows:

- For critical indicators, refer to the criteria outlined in section H4.
- For other key indicators, DPI Water will contact the LWU to review the reported data, unless the reported value can be adjusted in accordance with data obtained from an alternative source.
- For less significant indicators, the reported value will be deleted and the field left blank.

**Errors in data** - Where a reported value is obviously in error (e.g. numbers reported as text, values reported as \$M instead of \$'000 etc.), DPI Water will correct the error. Where there is some doubt, if it is a key indicator the LWU will be requested to review the reported value, otherwise it will be deleted and the field left blank.

**Unsubstantiated data** - Where the reported value is out of the expected range and is unsubstantiated, the validation process is as follows:

- For critical indicators, refer to the criteria outlined in section H4.

- For other key indicators, DPI Water will contact the LWU to review the reported data, unless the reported value can be adjusted in accordance with data obtained from an alternative source.
- For less significant indicators, the reported value will be deleted and the field left blank.

**Data that conflicts with data from other sources** - Where reported data conflicts with data obtained from alternative sources (e.g. the utility's strategic business plan or IWCMS Strategy, NSW Health, Environment Protection Authority, Special Schedules etc.) DPI Water will review the data and will either adjust the data to agree with the alternative source or request confirmation of the data from the LWU.

**Audited data** - The NWI requires an independent audit to be undertaken every 3 years<sup>48</sup> of the water supply and sewerage performance reporting for those LWUs with over 10,000 connected properties. DPI Water approves each LWU's proposed auditor, after confirming that the auditor has met the NWI Auditing Requirements and reviews the audit findings for the non-financial data and requests confirmation or follow up by the LWU's auditor for indicators that fail the audit.

**Financial data** – the financial data is reviewed by DPI Water and any omissions or inconsistencies are referred to the LWU for confirmation. Independent audits are conducted annually for all of the 30 NWI financial performance indicators, which are reported in Notes 2 and 3 of the Special Purpose Financial Statements to each LWU's annual financial statements (refer to pages 253 to 254).

LWUs are required to annually report the fair value<sup>49</sup> and the current replacement cost depreciation of their water supply and sewerage assets in their audited Annual Financial Statements.

## H4 Criteria for adjustment of critical indicators

DPI Water takes care to ensure that the critical indicators are consistent and accurate. The criteria adopted by DPI Water to review and where necessary adjust anomalous data for critical indicators are outlined on pages 353 to 357.

### H4.1 Aggregated businesses

The performance indicators in the NSW Performance Monitoring System are determined for each LWU's aggregated water supply or sewerage businesses rather than for individual water supply or sewerage systems. This is done to align with national performance reporting and to facilitate comparisons. In addition, detailed data showing the performance of each of the 535 LWU water and sewerage treatment works is published in Appendices D1 and D2 on pages 280 to 295. Refer also to Section H4.6 on page 355.

### H4.2 Connected properties

Performance indicators are determined on a 'per connected property' basis for consistency with the National Performance Framework. A **connected property** is a **property that is connected to the water supply or sewerage system**, as opposed to an **assessment**, which is a **bill issued by a water utility**.

**Determination of number of assessments** – The number of assessments is determined from a review of the data reported by the LWU in the NSW Performance Monitoring Database and the number of assessments reported by the LWU in its annual financial statements (Special Schedule Nos 3 and 5) together with the historic data. The number of assessments adopted must be consistent with historic data.

**Calculation of connected properties** – The number of connected properties is calculated as the product of the number of assessments times the ratio of the number of connected properties per assessment for each of water supply and sewerage (Tables 9 and 14 on pages 169 and 189). DPI Water has worked with LWUs to establish these ratios which do not change significantly from year to year.

<sup>48</sup> Independent audits of the auditable indicators in the *National Performance Framework 2013-14* for the 29 LWUs required to report nationally were undertaken in 2006-07, 2009-10 and 2012-13. Indicators which met the rigorous national auditing requirements have been published in the *National Performance Report 2014-15*. These LWUs serve 74% of the connected properties in regional NSW. In addition the reported values for the 30 NWI financial performance indicators have been independently audited annually since 2006-07 for all of the LWUs.

<sup>49</sup> In accordance with the Australian Accounting Standards Board's AASB116 Property Plant and Equipment. The *NSW Reference Rates Manual for Valuation of Water Supply, Sewerage and Stormwater Assets*, DPI Water 2016 provides current unit rates and guidance on the valuation and depreciation of such assets. Available at [www.water.nsw.gov.au](http://www.water.nsw.gov.au).

### H4.3 Charges and bills

**Charges** – water supply and sewerage charges (access charges and usage charges) are shown in Tables 6 and 7 on pages 134 and 146 for a LWU's principal water supply or sewerage system (charges are also shown for the non-potable supply component in dual supply systems). LWUs with multiple residential tariffs (i.e. those with different charges for separate water supply or sewerage systems) are shown in Tables 6A and 7A on pages 137 and 149. The charges shown in Tables 6 and 7 include the charges for the current reporting year (2014-15) and also for the forthcoming year (2015-16) and are obtained by DPI Water from each LWU's website.

**Typical residential bill (TRB)** – the TRB is calculated for each LWU's principal water supply system. The TRB is calculated from the utility's average annual volume of residential water supplied per connected property multiplied by the usage charge and added to the access charge. If the LWU has a dual supply system, the above calculation is repeated to obtain the non-potable water component which is added to the potable component to obtain the total TRB. Refer also to note 5 on page 33.

The current TRB is calculated from the current charges and the current residential water supplied. The TRB for the forthcoming reporting year is estimated from the forthcoming year's charges applied to the current residential water supplied. In the following year, the TRB will be recalculated using the actual volume of residential water supplied in that year. Therefore the current TRB shown in column 8 of Table 6 may differ from the corresponding TRB shown in the previous year's reports.

### H4.4 Urban water supplied

**Total potable urban water supplied** – Where a LWU has not reported its total potable urban water supplied, the data reported for the previous year has been adopted (shown in *italics bold* in the tables).

**Residential water supplied** – Where a LWU has reported residential water use but not commercial or industrial use, the reported residential use has been reduced and a commercial component has been included. Similarly, where a LWU has not reported residential water use, a residential component has been included. The residential component in each case has been calculated on the basis of the statewide average percentage of 58% of the LWU's Total Potable Urban Water Supplied (NWI Indicator W11.1 – refer to column 10 of Table 8 on page 155).

**Real Losses (mostly leakage)** - Where a LWU has reported a real loss of less than 6% of the total potable urban water supplied and has not provided evidence to substantiate such a low value of leakage, the reported real loss has been increased to 6%. In this case, the total potable urban water supplied has also been increased to include the additional leakage component. These adjusted values of real losses are shown in *italics bold* in column 8 of Table 8 on page 155. Refer also to page 15, note 10 on page 34 and Figure 28 on page 66.

**Non Revenue Water (NRW)** (Real losses (mostly leakage), Apparent Losses (under-registration of customer meters and illegal use) plus Unbilled Water supplied (eg. mains flushing and firefighting)) – Where a LWU has reported NRW of less than 10% of the total potable urban water supplied (W11.1), the reported NRW has been increased to 10%, unless the LWU has provided evidence of a Real Loss of less than 6%. In such cases, the adopted value for NRW has been determined as the Real Loss plus 4%. The adjusted values of NRW (W10.1) and total potable urban water supplied (W11.1) are shown in *italics bold* in columns 9 and 10 of Table 8 on page 155. Refer also to note 10 on page 34 and Figure 29 on page 67. NRW for the last 3 years in L/c/d is shown in column 41f of Table 10 on page 172.

### H4.5 Efficiency

**Operating Cost (OMA)** – NWI indicators F11 and F13 (water supply operating cost per property and water and sewerage operating cost per property respectively) are calculated in accordance with the NWI definitions and reported accordingly in the *National Performance Report* and in Appendix F on page 316.

However in Tables 5 and 11 on pages 116 and 180 and Figures 33 to 35 on pages 70 to 72, where a LWU purchases water from a bulk water provider, the operating cost calculated for the LWU excludes the purchase cost of the bulk water but includes an appropriate proportion of the operating cost of the bulk water provider. The cost allocated to the LWU is calculated by multiplying the operating cost of the bulk provider by the ratio of the water purchased by the LWU to the total water supplied by the bulk provider to all customers. This is done in order to provide a 'level playing field' comparison of operating costs by not penalising reticulators through inclusion of the capital cost component of providing the bulk supply, which is included in the purchase price of the water.

Where a LWU has not reported its operating cost, the previous year's operating cost per property has been adopted (shown in italics bold in the tables).

**Management Cost** – Where a LWU has not reported its management cost, the previous year's management cost per property has been adopted (shown in italics bold in the tables).

#### H4.6 Drinking water quality compliance

Drinking Water Quality Compliance for each LWU is based on the number of samples tested as part of the *NSW Health Drinking Water Monitoring Program* supplemented with samples reported by the LWU in the *NSW Performance Monitoring Database*. A LWU has complied with the 2015 NHMRC/NRMMC Australian Drinking Water Guidelines (2015 ADWG) for microbiological water quality (i.e. it is shown as 'Yes' in column (9) of Table 5 on page 116) if the required number of samples has been tested and at least 98%<sup>50</sup> of samples had no E.coli. Where E. coli is detected in a microbiological sample, further investigation is needed to determine whether there is a real problem with drinking water quality in accordance with the NSW Health protocol: (<http://www.health.nsw.gov.au/environment/water/Pages/nswhrp-microbiological.aspx>).

Similarly, chemical water quality (health related<sup>51</sup>) is satisfactory (shown as 'Yes' in column (11) of Table 5 on page 116) if the required number of samples has been tested and the 95th percentile of results does not exceed the guideline value for each chemical. Non-potable supplies are excluded.

Physical (aesthetic) water quality is satisfactory if the required number of samples has been tested and the mean of results does not exceed the guideline value for each characteristic.

Where a LWU has more than one treatment works, the reported compliance has been pro-rated on the basis of the number of samples tested at each treatment works. Where a LWU has not reported the number of samples tested or the compliance of samples from a particular treatment works and no details are available from NSW Health, the percentage of complying samples for that treatment works is deemed to be zero. Refer also to pages 8 and 9.

As noted on page 20, annual review of your Drinking Water Management System (DWMS) is required and any required corrective action needs to be included in your annual Action Plan to Council. Refer also to Circular LWU 18 (page 305).

The physical characteristics tested (aesthetic) are true colour, turbidity, total hardness as CaCO<sub>3</sub>, total dissolved solids (TDS) and pH.

The chemical characteristics tested (health related) are antimony, arsenic, barium, boron, cadmium, chromium, copper, fluoride, lead, manganese, mercury, molybdenum, nickel, nitrate, nitrite, selenium, silver and sulfate. Other chemical characteristics tested which are not health related are aluminium, calcium, chloride, iodine, iron, magnesium, sodium and zinc.

Columns 69, 70 and 71 of Table 12 on page 183 show the percentage of samples which complied with the Physical, Chemical and Microbiological requirements of ADWG for each of the last 3 years. Columns 69a, 70a and 71a show whether the LWU has complied with the 2015 ADWG for physical, chemical and microbiological water quality respectively in the 2014-15 financial year.

Columns 42h, 42j and 42l of Appendix D1 on page 280 show the percentage of the samples tested which complied with the 2015 ADWG for each water treatment works in 2014-15 for physical, chemical and microbiological water quality respectively.

It is important that specialist LWU infrastructure, such as water and sewage treatment works, dams and recycling projects, is fit for purpose, robust, cost-effective and without wasteful **'gold plating'** which penalises residents with an **unwarranted increase** to their typical residential bill (TRB). In this regard, any LWU proposals for the construction or modification of a dam, a water or sewage treatment works or a

<sup>50</sup> This value (98%) has been determined by NSW Health in accordance with section 10.3.1 on page 10-11 of 2015 ADWG and is the same value as applied for the 2004 ADWG.

Where a LWU has not complied with 2015 ADWG, the percentage of samples which complied is shown in columns (9) and (11) of Table 5 on page 116 for microbiological and chemical compliance respectively.

<sup>51</sup> The 2015 ADWG specify guideline limits for chemical water quality (health related). Aesthetic parameters such as iron, aluminium, sodium, total dissolved solids (TDS), chloride, iodine and zinc are excluded.

recycling project require DPI Water approval under section 60 of the Local Government Act, 1993 ([www.water.nsw.gov.au](http://www.water.nsw.gov.au)). Similarly, acceptance of a high or medium risk trade waste discharge to a LWU sewerage system requires a DPI Water Section 90(1) concurrence (page 358).

The section 60 approval involves an independent and objective review which allows DPI Water to share its insights and expertise in overseeing the 535 LWU water and sewage treatment works and 119 LWU dams. The section 60 review provides assurance to the community that the proposed infrastructure is fit for purpose and provides a robust, safe, cost-effective and soundly based solution, without wasteful 'gold plating'. Refer also to pages 106 and 112 of the *2014-15 NSW Water Supply and Sewerage Performance Monitoring Report* ([www.water.nsw.gov.au](http://www.water.nsw.gov.au)).

In addition, under section 61 of the *Local Government Act, 1993*, DPI Water carries out regular inspections of the 535 LWU water and sewage treatment works and provides feedback and mentoring to the LWU operators. Information for each LWU on the DPI Water section 61 reports on the LWU's water and sewage treatment works since 2015 is available in the NSW Performance Monitoring Database (login required). The detailed performance of each of these treatment works is disclosed annually in Appendices D1 and D2 on pages 280 to 295.

Each operator in charge of a water or sewage treatment works in regional NSW is required to have appropriate qualifications and experience ([www.water.nsw.gov.au](http://www.water.nsw.gov.au)). DPI Water conducts comprehensive operator training courses for LWU water and sewage treatment works operators ([www.water.nsw.gov.au](http://www.water.nsw.gov.au) and [urbanwater.ctw@dpi.nsw.gov.au](mailto:urbanwater.ctw@dpi.nsw.gov.au) (pages 36 and 360)). The detailed performance of each of these treatment works is publicly disclosed annually in Appendices D1 and D2 on pages 280 to 295.

Similarly, under the Aboriginal Communities Water and Sewerage Program ([www.water.nsw.gov.au](http://www.water.nsw.gov.au)), DPI Water carries out regular inspections of the water and sewerage infrastructure for 60 discrete Aboriginal Communities in NSW. The 2014-15 drinking water quality results for these communities are disclosed in Appendix D3 on page 296.

#### H4.7 Sewerage

**Sewage Collected** – Where a LWU did not report the current year's volume of sewage collected, either the previous year's value or the current year's volume of sewage treated has been adopted, whichever is the larger (shown in *italics bold* in the tables).

**Effluent Recycled** – Where a LWU has not reported a value for effluent recycled but has reported greater than 10% recycling in previous years, the percentage recycled for the current reporting year is assumed to be the same as that for the previous year (shown in *italics bold* in the tables).

**Compliance with Licence for Prescribed Indicators** – LWU Licence limits are generally 90 percentile limits. A LWU is deemed to comply with its licence for each prescribed indicator (i.e. compliance is 100%) if it achieves  $\geq 90\%$  compliance. Where there is no licence limit for a prescribed indicator, compliance is shown as 100%. Where a LWU has not reported the compliance for a sewage treatment works, compliance for that treatment works is deemed to be zero.

**Sewage Treatment Works (STW) Compliance** – A STW is fully compliant if it meets its licence conditions for all prescribed indicators. If any indicator which is prescribed in the licence fails to meet the licence conditions (i.e. BOD, Suspended Solids, Total Nitrogen, Oil and Grease, Phosphorous, Faecal Coliforms, Ammonia, pH), then the STW is deemed not to comply with its licence.

### H5 Implementation of best-practice management framework

As noted on page 5, the NSW *Best-Practice Management (BPM) Framework* (page 6) is a **locally based self-regulation regime**, with strategic oversight of LWU implementation of 19 outcomes required by the framework by DPI Water.

LWUs must implement the 19 planning, pricing and management outcomes required by the BPM framework in order to achieve appropriate, affordable, cost-effective and sustainable piped water supply and sewerage services and to comply with National Competition Policy and with the National Water Initiative. Meeting the outcomes required by the Framework is also a pre-requisite for payment of a dividend from the surplus of the water supply or sewerage businesses to the council's general revenue and is also a pre-requisite for financial assistance towards the capital cost of backlog infrastructure (as at 1996) under the CTWSS Program and the Regional Water and Waste Water Backlog (RWWWB) Program (page 5).

Each LWU reports its implementation of the outcomes required by the *Best-Practice Management Framework* in Notes 2 and 3 of the Special Purpose Financial Statements to its annual financial statements (pages 253 to 254). DPI Water assesses this reported implementation against the 19 required outcomes set out in Table 1 of the *Best-Practice Management Guidelines, 2007* (10 for water supply and 9 for sewerage – refer to pages 6 and 7). The assessment procedure for each required outcome is shown below. Where a LWU has not reported its implementation against one or more of the required outcomes, DPI Water will assess the LWU's implementation from other available data (e.g. annual financial statements, Strategic Business Plans submitted previously and completion of performance reporting via the *NSW Performance Monitoring Database*). Otherwise, the LWU will be deemed not to have implemented that particular required outcome. Each LWU's implementation results are shown in Table 3 on page 108.

Further information on implementation of integrated water cycle management (IWCM), strategic business planning, water conservation, drought management and trade waste regulation is available on pages 21 to 24, 105 and 110 of the *2014-15 NSW Water Supply and Sewerage Performance Monitoring Report* ([www.water.nsw.gov.au](http://www.water.nsw.gov.au)).

A LWU's **peak planning document** for water supply and sewerage is the **later of its IWCM Strategy and financial plan and SBP and financial plan** (page 8).

**Strategic Business Plan and Financial Plan** – The strategic business plan needs to be prepared in accordance with the July 2014 Strategic Business Plan Check List ([www.water.nsw.gov.au](http://www.water.nsw.gov.au)). Guidance for LWUs is available in the *NSW Water and Sewerage Strategic Business Planning Guidelines*, NSW Office of Water, July 2011 ([www.water.nsw.gov.au](http://www.water.nsw.gov.au)). Refer also to pages 22, 23, 108 and 113 of the *2014-15 NSW Water Supply and Sewerage Performance Monitoring Report* ([www.water.nsw.gov.au](http://www.water.nsw.gov.au)).

DPI Water reviews LWU strategic business plans and financial plans in order to ensure they are soundly based. A LWU has met the required outcome if it has prepared a sound 30-year water and/or sewerage strategic business plan and financial plan in accordance with the above Check List. Such a plan must include a sound 30-year total asset management plan (TAMP) (page 7) and demonstrate the long-term financial sustainability of the LWU's water and/or sewerage businesses and compliance with National Competition Policy. Where a LWU has a strategic business plan but the plan is more than 4 years old, it is deemed to have provisionally met the required outcome, and is shown as Yes\* in Table 3 on page 108 (columns 1) and Table 5 on page 116 (column 34). As noted on pages 110 and 119, such a LWU now needs to prepare a 30-year IWCM Strategy and 30-year financial plan in accordance with the July 2014 IWCM Check List ([www.water.nsw.gov.au](http://www.water.nsw.gov.au)).

As noted on page 20 each LWU needs to annually 'roll forward', review and update its 30-year total asset management plan for projects completed, modified or deferred and to prepare an updated 30-year financial plan. A brief report to Council should be provided on the updated financial plan, including any necessary corrective action (an example Report to Council is provided on page 131 of the *NSW Strategic Business Planning Guidelines*). Refer also to pages 104 and 108 of the *2014-15 NSW Water Supply and Sewerage Performance Monitoring Report* ([www.water.nsw.gov.au](http://www.water.nsw.gov.au)).

**Pricing** – The **11 pricing outcomes required** by the NSW best-practice management framework (page 6) are outlined below. These incorporate implementation of the NSW Framework for Regulation of Sewerage and Trade Waste<sup>52</sup>, which includes implementation of appropriate sewerage and trade waste charges and developer charges, as well as a sound trade waste regulation policy and an approval for each trade waste discharger. As noted below, the required outcomes for pricing include a non-residential sewer usage charge/kL and non-compliance trade waste usage and excess mass charges. In addition, the framework for regulation of sewerage and trade waste also involves mentoring and coaching of dischargers and enforcement measures which include financial penalties and finally, disconnection of a trade waste discharger in the event of persistent failure to comply with approval conditions (page 6).

**Full cost recovery** – Full cost recovery (lower bound pricing) is achieved if either the economic real rate of return or the return on assets is  $\geq 0$  (shown as 'Y' in column 14d of Table 6 on page 134 and

<sup>52</sup> The NSW Framework for Regulation of Sewerage and Trade Waste is a preventative risk management approach for achieving effective and efficient use of the sewerage system, which is a common pool resource (page 6).

column 11a of Table 7 on page 146). As noted on page 353, assets must be valued at fair value and current replacement cost depreciation must be applied.

Alternatively, if a LWU has significantly increased its charges in order to recover its costs, it is also deemed to have full cost recovery (shown as 'Y\*' in column 14d of Table 6 on page 134 and column 11a of Table 7 on page 146). Refer also to page 22 of this report and to Appendix G on page 84 of the *2010-11 NSW Water Supply and Sewerage Performance Monitoring Report* ([www.water.nsw.gov.au](http://www.water.nsw.gov.au)).

**Pay-for-use-pricing** – For water supply, this requires pay-for-use pricing, with the residential tariff independent of land value and no free water allowance. Refer to column 2a of Table 3 on page 108. Refer also to columns 1, 5b and 5d of Table 6 on page 134. All the NSW utilities have now met this required outcome.

**Residential water usage charges > 75%** - In order to provide strong pricing signals to residents and encourage efficient water use, the water supply tariff for LWUs with 4,000 or more connected properties must be such that at least 75% of residential revenue is obtained through water usage charges. At least 50% of residential revenue from usage charges is required for LWUs with fewer than 4,000 properties. Where a LWU has not met the above required outcomes but has obtained at least 70% (or 45% for fewer than 4,000 properties) of residential revenue from usage charges, it is deemed to have provisionally met the required outcome and is shown as Yes\*. Refer also to section 4.4 on page 13, Figure 13 on page 51, column 2c of Table 3 on page 108, column 13 of Table 6 on page 134 and pages 5 and 22 of the *2014-15 NSW Water Supply and Sewerage Performance Monitoring Report* ([www.water.nsw.gov.au](http://www.water.nsw.gov.au)).

**Appropriate non-residential water supply charges** – Appropriate water usage charge per kL and access charge relative to customer's capacity requirements. Refer to column 2d of Table 3 on page 108.

**Residential sewerage charges** – Residential tariff is independent of land value. Refer to column 2b of Table 3 on page 108 and to column 3 of Table 7 on page 146.

**Non-residential sewerage charges** – This requires a two part tariff with an appropriate sewer usage charge per kL and an access charge that is reflective of the peak load the customer may place on the sewerage system. Refer to column 2c of Table 3 on page 108, Figure 44 on page 81, and to column 3a of Table 7 on page 146.

**Liquid trade waste fees and charges** – This requires appropriate trade waste fees and charges to be applied to all liquid trade waste dischargers. These include non-compliance trade waste usage and excess mass charges (page 6). Refer to column 2d of Table 3 on page 108 and to column 4 of Table 7 on page 146. Refer also to Figure 45 on page 82 and Table 7C on page 153.

A sound liquid **trade waste regulation policy** (endorsed by DPI Water) and an appropriate approval for each trade waste discharger is a further required outcome. Refer to column 2f of Table 3 on page 108 and Table 7C on page 153.

In view of the potential risks to sewerage infrastructure, public health and safety and the environment, from uncontrolled trade waste discharges, the acceptance of trade discharges to the sewerage system requires DPI Water's concurrence under section 90(1) of the *Local Government Act, 1993* ([www.water.nsw.gov.au](http://www.water.nsw.gov.au)).

**Developer charges** – The required outcome is met if an appropriate Development Servicing Plan (DSP) with commercial developer charges is implemented. Utilities which have commercial developer charges but have not completed a DSP are assigned provisional implementation and are shown as Yes\*. In addition utilities with growth of under 5 lots/a are granted an exemption and are shown as Yes<sup>e</sup>. Refer to columns 2e of Table 3 on page 108. Refer also to column 7 of Table 6 on page 134 (water supply), column 7 of Table 7 on page 146 (sewerage). Until the release of any new developer charges guidelines, the NSW utilities are authorised to continue to annually index their existing water supply and sewerage developer charges.

**Complete Performance Report by due date** – A LWU meets the required outcome if it completes its performance reporting for water supply and/or sewerage by the due date (currently 15 September each year) and prepares and implements a sound annual Action Plan to Council. Refer to column 5 of Table 3 on page 108 (water supply) and column 3 on page 108 (sewerage).

**Water conservation** – The required outcome is met if the LWU has a water conservation and demand management plan. Refer to column 3 of Table 3 on page 108 and Table 8C on page 164.

**Drought management** – The required outcome is met if the LWU has a drought management plan. Refer to column 4 of Table 3 on page 108 and Table 8C on page 164.

**Integrated water cycle management** – A utility's IWCM Strategy needs to identify a 30-year strategy for water supply, sewerage and stormwater which provides the best value for money on the triple bottom line (TBL) basis of social, environmental and economic considerations. DPI Water reviews each LWU's IWCM Evaluation and IWCM Strategy to ensure they are soundly based. The IWCM Strategy needs to identify the best mix of capital works, non-build solutions, policies and operation and maintenance activities. Note that the 19 Best-Practice Management required outcomes aid the development of such a strategy through the required sound planning, pricing and management of services.

The required outcome is met if the LWU has commenced an integrated water cycle management (IWCM) study. Refer to column 6 of Table 3 on page 108 (water supply) and to column 4 on page 108 (sewerage). As indicated in note 5 on page 110, a utility which has completed its IWCM Strategy is shown as 'YesC' on page 108 and a utility which has only completed its IWCM Evaluation (Part 1 of the IWCM study) is shown as 'YesE' on page 108.

As indicated in Note 8 on page 110, LWUs whose IWCM Strategy is over 6 years old need to prepare a new 30-year IWCM Strategy, financial plan and report in accordance with the July 2014 IWCM Check List ([www.water.nsw.gov.au](http://www.water.nsw.gov.au)). Refer also to Appendix H on page 103 of the *2014-15 NSW Water Supply and Sewerage Performance Monitoring Report*.

## APPENDIX I: CERTIFICATION OF TREATMENT WORKS OPERATORS IN REGIONAL NSW

| LWU |                           | WATER SUPPLY                             |  |   |   | SEWERAGE                                 |   |   |
|-----|---------------------------|--|--|---|---|--|---|---|
|     |                           | Number of Water Treatment Operators* (1) | Number of Operators – Chemical Dosing <sup>+</sup> (2) | Number of WTW Operators in Training (3) | Meet National Certification Framework? <sup>a</sup> (4) | Number of Sewage Treatment Operators (5) | Number of STW Operators in Training (6) | Meet NSW Certification Requirements? <sup>2</sup> (7) |
| 11  | Albury                    | 2  | 1  |   | Yes   | 4  |   | Yes   |

**Notes:**

- Columns 1 and 2 above show that each of the 91<sup>#</sup> NSW LWUs responsible for providing water treatment for a drinking water supply has at least one fully qualified water treatment operator who meets the requirements of the National Certification Framework for water treatment operators (column 4). A total of 348 operators meet the National Certification Framework, including 309 operators qualified to operate a water treatment works or a chlorinator/aerator (column 1) and 39 operators qualified to operate a chlorinator/aerator (column 2). A further 68 operators are currently undertaking training in water treatment operation (column 3).
  - Column 5 above shows that the LWUs have 419 fully qualified wastewater treatment operators who met the NSW Certification requirements (column 7), involving a Certificate III in Water Operations (Wastewater Treatment) or equivalent and are employed in operating a LWU sewage treatment works. A further 65 operators are currently undergoing training, including 16 operators at Bourke, Cobar, Walcha and Walgett (column 6).
- # Excludes the 9 LWUs responsible for sewerage only, reticulators Cootamundra, Harden, Queanbeyan, and Young, and Cobar Water Board, which provides a bulk raw water supply.
- \* Such operators have a Certificate III in Water Operations (Water Treatment) or equivalent and are employed in operating a LWU treatment works or a chlorinator/aerator (refer to page 23 of NSW Guidelines for drinking water management systems, NSW Health and NSW Office of Water, 2013 (<http://www.health.nsw.gov.au/environment/water/Documents/NSW-Guidelines%20for-Drinking-Water-Management-Systems.pdf>)).
- + Such operators have a DPI Water Part 1 Certificate (Chemical Dosing Systems) or equivalent, have also completed chlorine safety training and are employed in operating a LWU chlorinator/aerator (refer to page 23 of NSW Guidelines for drinking water management systems).

Notes

- 1 Based on data reported in the Part B National Performance Report 2014-15 for utilities with over 10,000 connected properties and the urban data for all of regional NSW ([www.bom.gov.au](http://www.bom.gov.au)). In order to provide the best estimate for the Australian totals in column 14, where practicable, performance indicators which were not reported in the Part B Report have been estimated from similar reported indicators, as shown in notes 6 to 10 below. As there remain a small number of missing values for Tasmania, ACT and the Northern Territory, the Australian totals in column 14 for those performance indicators (W11.1, W11.3, W8.1+W9.1, W10.1, W18.5, W17) slightly understate the correct values. Refer also to Notes 6 and 7 on page 205.
- 2 Includes Water NSW for Sydney.
- 3 Includes Water NSW for the Fish River Water Supply.
- 4 Includes Gladstone Area Water Board.
- 5 Includes SEQ Water, except where duplicated reporting has occurred - eg. for W11 and W11.3.
- 6 Sydney's NRW is estimated as W11.3 - (W8.1 + W9.1).
- 7 As Perth did not report W10.1, W11.1 or W18.5, the reported values for W10, W11 and W18 have been used in the above tabulation. W11 was also used for W11.3, with W8 + W9 used for W8.1 + W9.1.
- 8 Results for Tasmania for indicators W11, W18, A2, A5, A1 and A4 are taken from the TasWater Annual Report 2014-15 ([www.taswater.com.au](http://www.taswater.com.au)).
- 9 As Melbourne Water did not report W11.3, the reported value for W11.1 has been used in the above tabulation.
- 10 Financial results for Northern Territory are from the 2013-14 National Performance Report. The number of water treatment works was obtained from the Power and Water website ([www.powerwater.com.au](http://www.powerwater.com.au)).

WS Water Supply  
WSS Water Supply and Sewerage  
SGE Sewerage

### Regional NSW vs NSW Totals

Appendix K shows that the populations receiving water supply and sewerage services in regional NSW are each 25% of the NSW totals of 7.22 million and 7.0 million respectively. The volume of urban water supplied in regional NSW is 33% of the NSW total of 890 GL and the recycled water supplied is 45% of the NSW total of 87 GL.

The water and sewerage revenue for regional NSW is 32% of the NSW total of \$4.37 billion, the operating cost is 35% of the NSW total of \$2.11 billion and capital expenditure is 37% of the NSW total of \$1.12 billion.

Regional NSW has 54% of the 59,000 km of NSW water mains, 40% of the 50,000 km of NSW sewerage mains and channels, 92% of the 178 NSW water treatment works and 87% of the 344 NSW sewage treatment works.

### NSW vs Australian Totals

Appendix K shows that the total populations receiving water supply and sewerage services in NSW are 32% and 34% respectively of the Australian totals of 22.2 million and 20.7 million. The volume of urban water supplied in NSW is 32% of the Australian total of 2,760 GL, and the recycled water supplied in NSW is 32% of the Australian total of 269 GL.

The water and sewerage revenue for NSW is 25% of the Australian total of \$17.4 billion, the operating cost is 25% of the Australian total of \$8.3 billion and capital expenditure is 31% of the Australian total of \$3.6 billion.

NSW has 30% of the 201,000 km of Australian water mains, 33% of the 151,000 km of Australian sewerage mains and channels, 32% of the 558 Australian water treatment works and 40% of the 869 Australian sewage treatment works.

Population receiving WS services (millions) - C1

Population receiving SGE services (millions) - C5

Total connected properties - WS (millions) - C4

Total connected properties - SGE (millions) - C8

Total urban water supplied (GL) - W11

Total urban potable water supplied (GL) - W11.1

Total volume of potable water produced (GL) - W11.3

Volume of potable water supplied - residential and non-residential (GL) - W8.1+W9.1
